THE UNIVERSITY CALENDAR

1900-1901

Sept. 13, 1900 to Jan. 31, 1902.

1900.

FIRST SEMESTER

Sept. 13, Thursday. Entrance Examinations begin.
Sept. 17, 18, Monday and Tuesday. Registration Days.
Sept. 19, Wednesday. Instruction begins.
Nov. 5, Monday. Latest date for Announcing Subjects of Theses.

Nov. 29, Thursday. Thanksgiving Day.

1901.

Feb. 1, Friday. First Semester ends.

SECOND SEMESTER

Feb. 4, Monday. Registration Day.
Feb. 5, Tuesday. Instruction begins.
Feb. 18, Monday. Prize Debate.

May 15, 16, 17, Wednesday evening to Friday evening. University High School Conference and Interscholastic Oratorical Contest.

May 17, Friday afternoon. University High School Conference.
May 17, Friday evening. Interscholastic Oratorical Contest.
May 17, 18, Friday and Saturday. Public School Art Exhibit.
May 18, Saturday. Interscholastic Athletic Meet.
May 27, Monday. Hazelton Prize Drill.
May 28, Tuesday. Competitive Drill.
May 31, Friday. Latest Day for Acceptance of Theses.
UNIVERSITY OF ILLINOIS

June 9, Sunday.  
June 10, Monday.  
June 11, Tuesday.  
June 12, Wednesday.  
Baccalaureate Address.  
Class Day.  
Alumni Day and Oratorical Contest.  
Thirtieth Annual Commencement.

**FIRST SEMESTER**

Sept. 11, 1901, Wednesday.  
Sept. 16, 17, Monday and Tuesday.  
Sept. 18, Wednesday.  
Nov. 4, Monday.  
Nov. 28, Thursday.  
Dec. 21, Saturday.  
1902.  
Jan. 6, Monday.  
Jan. 31, Friday.  
Entrance Examinations begin.  
Registration Days.  
Instruction begins.  
Latest date for Announcing Subjects of Theses.  
Thanksgiving Day.  
Holiday Recess begins.  
Instruction resumed.  
First Semester ends.

Theses.

Thirtieth Annual Commencement.

First Semester ends.
BOARD OF TRUSTEES

THE GOVERNOR OF ILLINOIS, Ex Officio
JOHN R. TANNER, Springfield.

THE PRESIDENT OF THE STATE BOARD OF AGRICULTURE,
WILLIAM H. FULKERSON, Jerseyville.

THE SUPERINTENDENT OF PUBLIC INSTRUCTION,
ALFRED BAYLISS, Springfield.
ALEXANDER McLEAN, Macomb.
SAMUEL A. BULLARD, Springfield.
LUCY L. FLOWER, Chicago.

The Majestic.
MARY TURNER CARRIEL, Jacksonville.
FRANCIS M. McKAY, Chicago.
61 Alice Court.

THOMAS J. SMITH, Champaign.
ALICE ASBURY ABBOTT, Chicago.
487 Bowen Avenue.
FREDERIC L. HATCH, Spring Grove.
AUGUSTUS F. NIGHTINGALE, Chicago.

Term of Office expires in 1901.
Term of Office expires in 1903.
Term of Office expires in 1905.

OFFICERS OF THE BOARD

ALEXANDER McLEAN, Macomb, President.
WILLIAM L. PILLSBURY, Urbana, Secretary.
ELBRIDGE G. KEITH, Chicago, Treasurer.

Metropolitan National Bank.
Professor S. W. SHATTUCK, Champaign, Business Manager.

EXECUTIVE COMMITTEE

ALEXANDER McLEAN, Chairman: FRANCIS M. McKAY,
LUCY L. FLOWER.
STANDING COMMITTEES

AGRICULTURE

BUILDINGS AND GROUNDS
Samuel A. Bullard, Chairman: Thomas J. Smith, Mary T. Carriel, Augustus F. Nightingale, Lucy L. Flower.

FINANCE
Francis M. McKay, Chairman: Augustus F. Nightingale, Thomas J. Smith.

INSTRUCTION
Lucy L. Flower, Chairman: Augustus F. Nightingale, Frederic L. Hatch, Alfred Bayliess, Mary T. Carriel.

PUBLICATION
Thomas J. Smith, Chairman: Alice Asbury Abbott, Samuel A. Bullard.

LIBRARY
Augustus F. Nightingale, Chairman: Mary T. Carriel, Thomas J. Smith, Frederic L. Hatch, Alfred Bayliess.

STUDENTS' WELFARE
Mary T. Carriel, Chairman: Lucy L. Flower, Samuel A. Bullard.

SCHOOL OF PHARMACY
Frederic L. Hatch, Chairman: Alice Asbury Abbott, Lucy L. Flower, Alfred Bayliess, Mary T. Carriel.

SCHOOL OF MEDICINE
Augustus F. Nightingale, Chairman: Thomas J. Smith, Francis M. McKay, Samuel A. Bullard, Lucy L. Flower.
OFFICERS OF ADMINISTRATION

ADMINISTRATIVE OFFICERS IN THE UNIVERSITY

President: ANDREW S. DRAPER, LL.D. Office, Library Building.

Business Manager: SAMUEL W. SHATTUCK, C.E. Office, Library Building. Office hours, 3 to 5 p.m.

Registrar: WILLIAM L. PILLSBURY, A.M. Office, Library Building. Office hours, 2 to 5 p.m.

COUNCIL OF ADMINISTRATION AND DEANS

President: ANDREW S. DRAPER, LL.D.

Dean of the General Faculty and of the Graduate School: THOMAS J. BURRILL, Ph.D., LL.D. Office, 10 Natural History Hall. Office hour, 11 to 12 a.m.

Dean of the College of Literature and Arts: DAVID KINLEY, Ph.D. Office, 305 University Hall. Secretary to the Council. Office hours, 8:30 to 9:30 a.m., and 1:20 to 2 p.m.

Dean of the College of Engineering: N. CLIFFORD RICKER, M.Arch. Office, 300 Engineering Hall. Office hours, 2:20 to 4:20 p.m.

Dean of the College of Science: STEPHEN A. FORBES, Ph.D. Office, 4 Natural History Hall. Office hours, 11 to 12 a.m., M., W., F., and 4 to 5 p.m., Tu., Th.

Dean of the College of Agriculture: EUGENE DAVENPORT, M.Agr. Office, 6 Natural History Hall. Office hour, 11 to 12 a.m.

Dean of the Woman's Department: VIOLET D. JAYNE, A.M. Office, 309 University Hall. Office hour, 11 to 12 a.m.

Dean of the College of Law: JAMES BROWN SCOTT, A.M., J.U.D. Office, 312 University Hall. Office hour, 11:15 to 12 a.m.
OTHER OFFICERS

LIBRARIAN: KATHARINE LUCINDA SHARP, Ph.M., B.L.S. Office, Library.

SUPERINTENDENT OF BUILDINGS AND GROUNDS: NELSON STRONG SPENCER, B.S., 112 East Green Street, Champaign. Office, Engineering Hall.

SECRETARY TO THE PRESIDENT: LILLIE HEATH, 505 East Green Street, Champaign. Office, Library Building.

ADVISORY BOARD OF THE AGRICULTURAL EXPERIMENT STATION

PROFESSOR T. J. BURRILL, President.

FROM THE STATE BOARD OF AGRICULTURE,
A. D. BARBER, Hamilton.

FROM THE STATE HORTICULTURAL SOCIETY,
H. AUGUSTINE, Normal.

FROM THE STATE DAIRYMEN'S ASSOCIATION,
H. B. GURLER, DeKalb.
FREDERIC L. HATCH, Spring Grove.
WILLIAM H. FULKERSON, Jerseyville.
PROFESSOR STEPHEN A. FORBES.
PROFESSOR EUGENE DAVENPORT.

ADVISORY BOARD TO THE SCHOOL OF PHARMACY

HENRY SWANNELL, Champaign, Term expires in 1900.
WM. SEMPILL, Chicago, Term expires in 1901.
A. E. EBERT, Chicago, Term expires in 1902.
W. J. FRISBIE, Bushnell, Term expires in 1903.
CHARLES RYAN, Springfield, Term expires in 1904.
FACULTY

[IN ORDER OF SENIORITY OF APPOINTMENT, EXCEPT THE PRESIDENT.]

ANDREW SLOAN DRAPER, LL.D., PRESIDENT.

President's House, University Campus, *U.

THOMAS JONATHAN BURRILL, *PH.D., LL.D., VICE-PRESIDENT, DEAN OF THE GENERAL FACULTY and Professor of Botany and Horticulture. 1007 West Green Street, U.

SAMUEL WALKER SHATTUCK, C.E., Professor of Mathematics. 108 West Hill Street, *C.

EDWARD SNYDER, A.M., Professor of the German Language and Literature, emeritus. Pacific Beach, Cal.

NATHAN CLIFFORD RICKER, M.ARCH., DEAN OF THE COLLEGE OF ENGINEERING and Professor of Architecture. 612 West Green Street, U.

IRA OSBORN BAKER, C.E., Professor of Civil Engineering. 702 West University Avenue, C.

STEPHEN ALFRED FORBES, PH.D., DEAN OF THE COLLEGE OF SCIENCE and Professor of Zoology. 1209 West Springfield Avenue, U.

CHARLES WESLEY ROLFE, M.S., Professor of Geology. 601 East John Street, C.

DONALD McINTOSH, V.S., Professor of Veterinary Science. 511 West Park Street, C.

ARTHUR NEWELL TALBOT, C.E., Professor of Municipal and Sanitary Engineering. 1011 California Avenue, U.

ARTHUR WILLIAM PALMER, Sc.D., Professor of Chemistry. 608 South Mathews Avenue, U.

FRANK FORREST FREDERICK, Professor of Art and Design. 604 South Mathews Avenue, U.

SAMUEL WILSON PARR, M.S., Professor of Applied Chemistry. 913 1-2 West Green Street, U.

HERBERT JEWETT BARTON, A.M., Professor of the Latin Language and Literature. 406 West Hill Street, C.

* U. stands for Urbana; C., for Champaign.
CHARLES MELVILLE MOSS, Ph.D., Professor of the Greek Language and Literature. 806 South Mathews Avenue, U.

DANIEL KILHAM DODGE, Ph.D., Professor of the English Language and Literature. 406 North State Street, C.

LESTER PAIGE BRECKENRIDGE, Ph.B., Professor of Mechanical Engineering. 1005 West Green Street, U.

DAVID KINLEY, Ph.D., Dean of the College of Literature and Arts and Professor of Economics. 1006 West Green Street, U.

EUGENE DAVIDPORT, M.Agr., Dean of the College of Agriculture and Professor of Animal Husbandry. Experiment Station Farm, U.

ALBERT PRUDEN CARMAN, Sc.D., Professor of Physics. 112 West Hill Street, C.

WALTER HOWE JONES, Professor of Music. 503 East Daniel Street, C.

EVARTS BOUTELL GREENE, Ph.D., Professor of History. 905 California Avenue, U.

CHARLES CHURCHILL PICKETT, A.B., Professor of Law. 606 South Mathews Avenue, U.

KATHARINE LUCINDA SHARP, Ph.M., B.L.S., Director of the Library School; Professor of Library Economy; Head Librarian. 205 East Green Street, C.

GEORGE THEOPHILUS KEMP, M.D., Ph.D., Professor of Physiology. 112 West Hill Street, C.

GEORGE WILLIAM MYERS, Ph.D., Professor of Astronomy and Applied Mathematics and Director of the Observatory. 601 West Green Street, U.

WILLIAM LINCOLN DREW, LL.B., Professor of Law. 602 Orchard Street, U.

JACOB KINZER SHELL, M.D., Professor of Physical Training and Director of Men's Gymnasium. 905 West Green Street, U.

LEWIS ADDISON RHOADES, Ph.D., Professor of the German Language and Literature. 912 California Avenue, U.

THOMAS ARKLE CLARK, B.L., Professor of Rhetoric. 928 West Illinois Street, U.

ARTHUR HILL DANIELS, Ph.D., Professor of Philosophy. 913 West Illinois Street, U.

GEORGE DAY FAIRFIELD, A.M., Professor of Romanic Languages and Secretary. 1005 West Illinois Street, U.

CHARLES WESLEY TOOKE, A.M., Professor of Public Law and Administration. 508 West Green Street, U.
PERRY GREELEY HOLDEN, M.S., Professor of Agronomy.  
903 California Avenue, U.

705 South Wright Street, C.

THOMAS WELBURN HUGHES, LL.M., Professor of Law.  
1013 West Illinois Street, U.

JAMES BROWN SCOTT, A.M., J.U.D., Dean of the College of Law and Professor of Law.  
111 West Hill Street, C.

WILLIAM SLEEPER ALDRICH, M.E., Professor of Electrical Engineering.  
909 California Avenue, U.

NEWTON ALONZO WELLS, M.P., Professor of the History and Practice of Painting.  
932 West Illinois Street, U.

DILLARD HAZELRIGG CLARK, Captain U.S.A. (Retired), Professor of Military Science and Tactics.  
911 California Avenue, U.

EDWIN GRANT DEXTER, B.Pd., Ph.D., Professor of Pedagogy.  
EDGAR J TOWNSEND, Ph.M., Associate Professor of Mathematics. (On leave 1899-1900.)

JAMES McLAREN WHITE, B.S., Associate Professor of Architecture.  
111 West Hill Street, C.

WILLIAM ESTY, B.S., A.M., Associate Professor of Electrical Engineering.  
905 California Avenue, U.

VIOLET DELILLE JAYNE, A.M., Dean of the Woman's Department and Associate Professor of the English Language and Literature.  
932 West Illinois Street, U.

HARRY SANDS GRINDLEY, Sc.D., Associate Professor of Chemistry.  
918 West Green Street, U.

HERMAN S PIATT, Ph.D., Assistant Professor of Romanic Languages.  
924 West Illinois Street, U.

FRED ANSON SAGER, B.S., Assistant Professor of Physics.  
502 West Elm Street, U.

FRANK SMITH, A.M., Assistant Professor of Zoology.  
1106 West Illinois Street, U.

CYRUS DANIEL McLANE, B.S., Assistant Professor of Architectural Construction.  
402 West Clark Street, C.

JAMES DAVID PHILLIPS, B.S., Assistant Professor of General Engineering Drawing.  
410 West Church Street, C.

SETH JUSTIN TEMPLE, Ph.B., Assistant Professor of Architecture.  
1016 West California Avenue, U.
CHARLES ATWOOD KOFOID, Ph.D., Assistant Professor of Zoology.  909 California Avenue, U.

OSCAR QUICK, A.M., Assistant Professor of Physics.  907 West Green Street, U.

JOSEPH CULLEN BLAIR, Assistant Professor of Horticulture.  907 South Wright Street, C.

WILLIAM HAND BROWNE, Jr., A.B., Assistant Professor of Electrical Engineering.  510 West High Street, U.

GEORGE HENRY MEYER, A.M., Assistant Professor of the German Language and Literature.  912 California Avenue, U.

MAUDE WHEELER STRAIGHT, A.B., Assistant Professor of Library Economy.  205 East Green Street, C.

GEORGE ALFRED GOODENOUGH, B.S., Assistant Professor of Mechanical Engineering.  909 West Green Street, U.

MILO SMITH KETCHUM, B.S., Assistant Professor of Civil Engineering.  510 John Street, C.

STRATTON D BROOKS, M.Pd., Assistant Professor of Pedagogy and High School Visitor.  808 West Oregon Street, U.

INSTRUCTORS AND ASSISTANTS

JENNETTE EMELINE CARPENTER, O.M., Director of Physical Training for Women.  407 East Green Street, C.

GEORGE A. HUFF, Jr., Assistant Director of Gymnasium and Coach of Athletic Teams.  511 West University Avenue, C.

WILBER JOHN FRASER, B.S., Instructor in Dairy Husbandry.  1003 South Wright Street, C.

CARLTON RAYMOND ROSE, Ph.M., Instructor in Chemistry.  806 South Sixth Street, C.

MARGARET MANN, Senior Instructor in Library Economy.  205 East Green Street, C.

CHARLES THORNTON WILDER, B.S., Instructor in Photog-raphy and in charge of Blue-Print Room.  305 West Hill Street, C.

WILLIAM CHARLES BRENKE, M.S., Instructor in Astronomy.  612 Stoughton Street, U.

MATTHEW BROWN HAMMOND, Ph.D., Instructor in Economics.  905 California Avenue, U.

HENRY LAWRENCE SCHOOLCRAFT, Ph.D., Instructor in History.  909 California Avenue, U.

NEIL CONWELL BROOKS, Ph.D., Instructor in German.  905 West Illinois Street, U.
EDWARD LAWRENCE MILNE, B.S., Instructor in Mathematics.
307 West Hill Street, C.

MARTHA JACKSON KYLE, A.M., Instructor in Rhetoric.
502 Goodwin Avenue, U.

HENRY LIVINGSTON COAR, A.M., Instructor in Mathematics.
930 West Illinois Street, U.

EDWARD CHARLES SCHMIDT, M.E., Instructor in Railroad Engineering.
EDD CHARLES OLIVER, B.S., Instructor in Mechanical Engineering.
WILLIAM ALEXANDER ADAMS, A.B., Instructor of Rhetoric and Public Speaking.
Ralph Wylie, Instructor in Violin and Musical Theory.
1101 1-2 West California Avenue, U.

EMMA QUINBY FULLER, A.M., Instructor in Voice.
602 Daniel Street, C.

EDWARD JOHN LAKE, B.S., Instructor in Art and Design.
616 West Church Street, C.

LUCY HAMILTON CARSON, A.M., Instructor in English.
502 Goodwin Avenue, U.

WILLIAM JOHN KENNEDY, B.Agr., Instructor in Animal Husbandry.
403 South Wright Street, C.

JOHN WILLIAM LLOYD, B.S.A., Instructor in Horticulture.
504 East Green Street, C.

GEORGE MELLINGER HOLFERTY, M.S., Instructor in Botany.
931 West Green Street, U.

HUGH ELMER WARD, M.S., Instructor in Soil Physics.
1011 West Illinois Street, U.

ROBERT LOUIS SHORT, A.B., Instructor in Mathematics.
605 West Green Street, U.

JOHN HANCOCK McCLELLAN, A.M., Instructor in Zoölogy.
1106 West Illinois Street, U.

OSCAR ERF, B.S., Instructor in Dairy Husbandry.
1011 West Illinois Street, U.

CLENDON VANMETER MILLAR, M.S., Chief Assistant in Chemistry, on State Water Survey.
707 West California Avenue, U.

JESSIE YOUNGE FOX, Assistant in Piano.
603 East Daniel Street, C.

GEORGE DAVID HUBBARD, M.S., Assistant in Geology.
212 West Illinois Street, U.
CHARLES VICTOR SEASTONE, B.S., Assistant in Theoretical and Applied Mechanics. 926 West Illinois Street, U.
HUBERT VINTON CARPENTER, M.S., Assistant in Physics. 812 West Illinois Street, U.
JOHN LANGLEY SAMMIS, M.S., Assistant in Chemistry. 307 East Springfield Avenue, C.
ROBERT WATT STARK, B.S., Assistant in Chemistry, on State Water Survey. 201 West Vine Street, C.
HALBERT LILLY CHIPPS, B.S., Assistant in Civil Engineering. 713 West Elm Street, U.
JAMES FRANKLIN KABLE, B.S., Assistant in General Engineering Drawing. 1109 West Springfield Avenue, U.
ARCHIBALD DIXON SHAMEL, B.S., Assistant in Farm Crops. 811 West Illinois Street, U.
DWIGHT T RANDALL, B.S., Assistant in Mechanical Engineering. 707 1-2 West California Avenue, U.
ALBERT FRANKLIN BURGESS, M.S., Assistant in Entomology. 936 West Illinois Street, U.
JAMES HENRI WALTON, JR., B.S., Assistant in Chemistry. 713 West Elm Street, U.
FRANK ROY FRAPRIE, B.S., Assistant in Chemistry. 713 West Elm Street, U.
FRED RANDALL CRANE, B.S., Assistant in Farm Mechanics. 1011 West Illinois Street, U.
HARRY CURTISS MARBLE, B.S., Assistant in Electrical Engineering. 305 West University Avenue, C.
EDWARD PHILLIPS WALTERS, B.S., Assistant in Chemistry, on State Water Survey. 905 West Illinois Street, U.
CYRIL BALFOUR CLARK, Foreman in Machine Shops. 602 East John Street, C.
ALBERT ROOT CURTISS, Foreman in Wood Shops. 606 East John Street, C.
HENRY JONES, Foreman in Blacksmith Shop. 602 East Green Street, C.
JOSEPH HENDERSON WILSON, Foreman in Foundry. 602 Stoughton Street, C.
GRACE OSBORNE EDWARDS, B.S., B.L.S., Assistant Cataloger. 934 West Illinois Street, U.
LAURA RUSSELL GIBBS, Assistant in charge of Loan Desk. 411 East John Street, C.
GERTRUDE SHAWHAN, B.L., Assistant in charge of Loan Desk. 807 South Wright Street, C.
FACULTY OF COLLEGE OF MEDICINE

WILLARD OTIS WATERS, A.B., Order Clerk, Library.
903 California Avenue, U.

ADAM JULIUS STROHM, Order Clerk, Library.
802 West Green Street, U.

CECILIA McCONNELL, Reviser in Library School.
934 West Illinois Street, U.

EMMA REED JUTTON, B.L.S., Reviser in Library School.
601 South Wright Street, C.

WILLIAM JOHN FULTON, A.B., Custodian of Law Library.
110 East Green Street, C.

GEORGE HENRY CAMPBELL, B.L., Fellow in Latin.
207 South Neil Street, C.

RALPH WILSON WEIRICK, B.S., Fellow in Architecture.
1004 West Green Street, U.

OSCAR ADOLPH LEUTWILER, B.S., Fellow in Mechanical Engineering.
503 West Green Street, U.

FRED CONRAD KOCH, B.S., Fellow in Chemistry.
312 West Clark Street, C.

HORACE CHAMBERLAIN PORTER, A.B., B.S., Fellow in Chemistry.
306 West Hill Street, C.

ARTHUR ELIJAH PAINE, A.B., Scholar in Economics.
-506 South Third Street, C.

HADLY WINFIELD QUAIN'TANCE, A.B., Scholar in Economics.
404 Stoughton Street, C.

WILLIAM ALBERT HAWLEY, Assistant in Military Science.
603 East Daniel Street, C.

PETER PHILIP SCHAEFER, Assistant Custodian of the Law Library.
503 South Sixth Street, C.

COLLEGE OF MEDICINE

COLLEGE OF PHYSICIANS AND SURGEONS OF CHICAGO

FACULTY

WILLIAM E. QUINE, M.D., DEAN, Professor of Principles and Practice of Medicine and Clinical Medicine.
Columbus Memorial Building, Chicago.

DANIEL A. K. STEELE, M.D., ACTUARY, Professor of Principles and Practice of Surgery and Clinical Surgery.
Columbus Memorial Building, Chicago.
OSCAR A. KING, M.D., Professor of Neurology, Psychiatry, and Clinical Medicine. 
70 State Street, Chicago.

HENRY PARKER NEWMAN, A.M., M.D., Professor of Clinical Gynecology.
Columbus Memorial Building, Chicago.

BAYARD HOLMES, B.S., M.D., Senior Professor of Principles of Surgery.
Columbus Memorial Building, Chicago.

JOHN H. CURTIS, M.D., Professor of Therapeutics, Clinical Instructor in Medicine.
Chicago View Building, Chicago.

G. FRANK LYDSTON, M.D., Professor of Genito-Urinary Surgery and Venereal Diseases.
Reliance Building, Chicago.

ROBERT H. BABCOCK, A.M., M.D., Professor of Clinical Medicine and Diseases of the Chest.
Columbus Memorial Building, Chicago.

BOERNE BETTMAN, M.D., Professor of Diseases of the Eye and Ear, and Clinical Ophthalmology.
Venetian Building, Chicago.

JOHN E. HARPER, A.M., M.D., Professor of Diseases of the Eye and Ear, and Clinical Ophthalmology.
Masonic Temple, Chicago.

Waukegan.

W. S. CHRISTOPHER, M.D., Professor of Pediatrics.
408 Center Street, Chicago.

JOHN B. MURPHY, M.D., Professor of Clinical Surgery.
Reliance Building, Chicago.

HENRY T. BYFORD, A.M., M.D., Professor of Gynecology and Clinical Gynecology.
Reliance Building, Chicago.

WILLIAM ALLEN PUSEY, A.M., M.D., SECRETARY OF THE FACULTY and Professor of Dermatology and Clinical Dermatology.
Columbus Memorial Building, Chicago.

MOREAU R. BROWN, M.D., Professor of Rhinology and Laryngology.
Venetian Building, Chicago.

T. A. DAVIS, M.D., Professor of Principles of Surgery.
987 Jackson Boulevard, Chicago.

J. A. WESENER, Ph.C., M.D., Professor of Chemistry.
Columbus Memorial Building, Chicago.

T. MELVILLE HARDIE, A.M., M.D., Professor of Otology.
Venetian Building, Chicago.

W. AUGUSTUS EVANS, M.D., Professor of Pathology.
Columbus Memorial Building, Chicago.

FRANK B. EARLE, M.D., Professor of Obstetrics.
902 West Monroe Street, Chicago.
HENRY L. TOLMAN, Lecturer on Medical Jurisprudence.
929 Chicago Opera House Block, Chicago.

F. R. SHERWOOD, M.D., Professor of Anatomy.
100 State Street, Chicago.

W. T. ECKLEY, M.D., Professor and Demonstrator of Anatomy.
386 Ashland Boulevard, Chicago.

ADOLPH GEHRMANN, Professor of Bacteriology.
Columbus Memorial Building, Chicago.

CHARLES DAVISON, M.D., Professor of Surgical Anatomy.
103 State Street, Chicago.

A. H. BRUMBACK, M.D., Professor of Physical Diagnosis.
Reliance Building, Chicago.

EDWARD C. SEUFERT, M.D., Adjunct Professor of Histology and Microscopy.
829 Milwaukee Avenue, Chicago.

G. W. POST, A.M., M.D., Adjunct Professor of the Practice of Medicine.

GEORGE F. BUTLER, Ph.G., M.D., Professor of Materia Medica and Clinical Medicine. Columbus Memorial Building, Chicago.

E. G. EARLE, M.D., Professor of Histology and Microscopy.
91 Lincoln Avenue, Chicago.

J. T. MILNAMOW, M.D., Professor of Physical Diagnosis.
1613 Park Avenue, Chicago.

W. M. HARSHA, M.D., Professor of Operative and Clinical Surgery.
Columbus Memorial Building, Chicago.

M. L. GOODKIND, M.D., Professor of General Diagnosis.
Columbus Memorial Building, Chicago.

F. E. WYNEKOOP, B.S., M.D., Professor of Biology and Embryology.
1563 West Monroe Street, Chicago.

T. B. WIGGIN, M.D., Adjunct Professor of General Diagnosis.
Reliance Building, Chicago.

A. H. BURR, Ph.B., M.D., Adjunct Professor of the Practice of Medicine.
Reliance Building, Chicago.

W. H. G. LOGAN, D.D.S., Professor of Dental Surgery.
785 Winthrop Avenue, Chicago.

CARL BECK, M.D., Professor of Surgical Pathology.
Reliance Building, Chicago.

L. HARRISON METTLER, M.D., Professor of Physiology of the Nervous System.
100 State Street, Chicago.

CASEY A. WOOD, C.M., M.D., Professor of Clinical Ophthalmology.
103 East Adams Street, Chicago.

A. McDIARMID, M.D., Adjunct Professor of Obstetrics.
103 State Street, Chicago.
L. J. MITCHELL, M.D., Adjunct Professor of Anatomy.  
City Hall, Chicago.

C. C. O'BYRNE, M.D., Adjunct Professor of Pathology.  
747 W. Monroe Street, Chicago.

RACHELLE S. YARROS, M.D., Adjunct Professor of Clinical Obstetrics.  
18 Bellevue Place, Chicago.

LECTURERS, DEMONSTRATORS, AND CLINICAL INSTRUCTORS

W. E. GAMBLE, B.S., M.D., Lecturer on Ophthalmology and Otology.  
Reliance Building, Chicago.

FRANKLIN S. CHENEY, A.M., M.D., Lecturer on Diseases of Children and Clinical Instructor in Medicine.  
1004 West Madison Street, Chicago.

W. L. BALLenger, M.D., Lecturer on Rhinology and Laryngology.  
100 State Street, Chicago.

F. W. E. HENKEL, Ph.G., M.D., Lecturer on Materia Medica.  
103 State Street, Chicago.

F. GREGORY CONNELL, M.D., Lecturer on Surgery.  
998 Douglas Boulevard, Chicago.

S. G. WEST, M.D., Lecturer on Gynecology.  
Columbus Memorial Building, Chicago.

D. N. EISENDRATH, M.D., Lecturer on Surgical Pathology.  
103 State Street, Chicago.

R. H. BROWN, M.D., Clinical Instructor in Diseases of Nose and Throat.  
1217 Jackson Boulevard, Chicago.

M. CORBETT, M.D., Clinical Instructor in Gynecology.  
1086 West Twelfth Street, Chicago.

C. M. BALLARD, B.S., M.D., Clinical Instructor in Gynecology.  
243 South Leavitt Street, Chicago.

H. E. SANTEE, M.D., Clinical Instructor in Chest Diseases.  
770 Warren Avenue, Chicago.

H. W. BERARD, M.D., Clinical Instructor in Diseases of the Eye and Ear.  
1107 West Chicago Avenue, Chicago.

IRA WYNEKOOP, M.D., Instructor in Biology.  
College.

THOMAS J. JACKSON, A.M., M.D., Assistant to the Professor of Practice of Medicine.  
521 Thirty-ninth Street, Chicago.

U. G. DARLING, M.D., Clinical Instructor in Nervous Diseases.  
1001 West Madison Street, Chicago.

F. F. SEVILLE, Ph.G., M.D., Clinical Instructor in Rhinology and Laryngology.  
1620 West Madison Street, Chicago.
BENJAMIN FELTENSTEIN, Clinical Instructor in Children's Diseases. 1573 Monroe Street, Chicago.

W. M. BURROUGHS, M.D., Clinical Instructor in Genito-Urinary Diseases. 883 West North Avenue, Chicago.

RICHARD FYFE, M.D., Clinical Instructor in Orthopedics. 84 North Robey Street, Chicago.

C. W. BARRETT, M.D., Clinical Instructor in Gynecology. 438 LaSalle Avenue, Chicago.

F. J. EHRMANN, M.D., Clinical Instructor in Surgery. 932 West Twenty-Second Street, Chicago.

W. E. C QATES, Jr., M.D., Instructor in Bacteriology and Pathology. 655 West Twelfth Street, Chicago.

S. B. DICKINSON, M.D., Clinical Instructor in Diseases of Children. Austin, Illinois.

ROSA ENGLEMAN, M.D., Clinical Instructor in Children's Diseases. 3033 Indiana Avenue, Chicago.

H. E. WAGNER, M.D., Clinical Instructor in Genito-Urinary Diseases. Corner Milwaukee and Armitage Avenues, Chicago.

C. D. PENCE, M.D., Clinical Instructor in Diseases of the Chest. 1392 Ogden Avenue, Chicago.

C. E. HUMISTON, M.D., Clinical Instructor in Diseases of the Chest. Austin.

ANABEL B. HOLMES, M.D., Clinical Instructor in Nervous Diseases. 103 State Street, Chicago.

F. A. PHILLIPS, M.D., Clinical Instructor in Diseases of the Eye and Ear. 100 State Street, Chicago.

W. S. ROYCE, M.D., Clinical Instructor in Surgery. 240 Honore Street, Chicago.

A. B. HALE, B.A., M.D., Instructor in Ophthalmology. 103 State Street, Chicago.

S. S. FRIDUS, M.D., Instructor in Practice of Medicine. College.

F. C. ZAPFFE, M.D., Instructor in Diseases of the Chest. College.

THEODORE TIEKEN, M.D., Instructor in Pathology. College.

C. F. STOLTZ, M.D., Clinical Instructor in Medicine. Morgan Park.

THEODORE SACHS, M.D., Clinical Instructor in Medicine. 478 South Ashland Avenue, Chicago.

E. E. ANTISDALE, M.D., Clinical Instructor in Ophthalmology and Otology. 103 State Street, Chicago.

S. DAHL, M.D., Clinical Instructor in Surgery. 822 North Western Avenue, Chicago.

AIME PAUL HEINICK, M.D., Clinical Instructor in Genito-Urinary Diseases. 872 Trumbull Avenue, Chicago.

E. A. FISCHKIN, M.D., Clinical Instructor in Dermatology. 465 Milwaukee Avenue, Chicago.

JOHN S. NAGEL, M.D., Clinical Instructor in Surgery. 323 South Western Avenue, Chicago.

N. M. VERRY, Superintendent. College.

GRACE H. BRYANT, Librarian. College.

E. M. HEELAN, Clerk. College.

P. D. WHYTE, Curator of the Laboratories. College.

SCHOOL OF PHARMACY

FACULTY

FREDERICK MARION GOODMAN, PH.G., DEAN OF THE FACULTY, Professor of Materia Medica and Botany and Director of the Microscopical Laboratory. 465 State Street, Chicago.

CARL SVANTE NICANOR HALLBERG, PH.G., Professor of Theoretical and Practical Pharmacy and Director of the Pharmaceutical Laboratories. 358 Dearborn Street, Chicago.

WILLIAM AUGUST PUCKNER, PH.G., Professor of Physics and Chemistry and Director of the Chemical Laboratory. 75 Wells Street, Chicago.

WILLIAM BAKER DAY, PH.G., SECRETARY OF THE FACULTY, Professor of Histological Botany. 465 State Street, Chicago.

HENRY HORACE ROGERS, PH.B., M.D., Lecturer on Physiology. 465 State Street, Chicago.

EPHRIAM DINSMORE IRVINE, PH.G., Instructor in Pharmacy. 358 Dearborn Street, Chicago.

EDMUND NORRIS GATHERCOAL, PH.G., Assistant in Microscopy. 465 State Street, Chicago.

WALTER AUGUST JUNGK, PH.G., Assistant in Chemistry. 465 State Street, Chicago.
PREPARATORY SCHOOL

INSTRUCTORS

EDWARD GARDINER HOWE, B.S., Principal.
South Mathews Avenue, U.

LILLIE ADELLE CLENDENIN, Instructor in English.
1101½ California Avenue, U.

CHARLES BREWSTER RANDOLPH, A.B., Instructor in Greek and Latin.
412 West Elm Street, U.

CLARENCE WALWORTH ALVORD, A.B., Instructor in History and Mathematics.
1101 California Avenue, U.

JAMES WILLIAM BUCHANAN, Instructor in Mathematics.
928 West Green Street, U.

STATE LABORATORY OF NATURAL HISTORY

LABORATORY STAFF

PROFESSOR STEPHEN ALFRED FORBES, Ph.D., Director.
1209 West Springfield Avenue, U.

CHARLES ARTHUR HART, Systematic Entomologist.
923 West Green Street, U.

CHARLES ATWOOD KOFOID, Ph.D., Superintendent of Natural History Survey.
909 California Avenue, U.

MARY JANE SNYDER, Secretary.
806 South Sixth Street, C.

HENRY CLINTON FORBES, Librarian and Business Agent.
912 West Illinois Street, U.

LYDIA MOORE HART, Artist.
923 West Green Street, U.

ALICE MARIE BEACH, M.S., Entomological Assistant.
912 West Illinois Street, U.

HOWARD OAKLEY WOODWORTH, M.S., Entomological Assistant.
610 East Clark Street, C.

EDWARD CLARENCE GREEN, B.S., Field Entomologist.
603 East Springfield Avenue, C.

RALPH WALDO BRAUCHER, B.S.
603 East Springfield Avenue, C.

THOMAS LARGE, B.A., Ichthyological Assistant.
702 West Oregon Street, U.
AGRICULTURAL EXPERIMENT STATION

STATION STAFF

Professor Eugene Davenport, M.Agr., Director, Agricul
turist.

Professor Thomas Jonathan Burrill, Ph.D., Horticulturist and Botanist.

Cyril George Hopkins, Ph.D., Chemist.

Professor Stephen Alfred Forbes, Ph.D., Consulting
Entomologist.

Professor Donald McIntosh, V.S., Consulting Veterinarian.

George Perkins Clinton, M.S., Assistant Botanist.

Wilber John Fraser, B.S., Assistant in charge of Dairying.

Perry Greeley Holden, B.S., Assistant Agriculturist.

Joseph Cullen Blair, Assistant Horticulturist.

Louie Henrie Smith, M.S., Assistant Chemist.

Archibald Dixon Shamel, B.S., Field Assistant.
UNIVERSITY OF ILLINOIS

LOCATION

The University of Illinois is situated in Champaign County, in the eastern central part of the state between the cities of Champaign and Urbana, within the corporate limits of the latter. It is one hundred and twenty-eight miles south of Chicago, at the junction of the Illinois Central, the Cleveland, Cincinnati, Chicago and St. Louis, and the Wabash railroads. The country around is a rich and prosperous agricultural region. The cities of Urbana and Champaign have a combined population of about 15,000.

HISTORY

In 1862 the national government donated to each state in the Union public land scrip in quantity equal to 30,000 acres for each senator and representative in congress; "for the endowment, support, and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts * * * * in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

On account of this grant the state pays the University, semi-annually, interest at the rate of five per cent. on about $495,000, and the University owns about 8,500 acres of unimproved land, worth, approximately, $100,000.

To secure the location of the University several counties entered into competition by proposing to donate to its use specified sums of money, or their equivalent. Champaign County offered a large brick building in the suburbs of
Urbana, erected for a seminary and nearly completed, about 1,000 acres of land, and $100,000 in county bonds. To this the Illinois Central Railroad added $50,000 in freight. The General Assembly accepted this offer May 8, 1867.

The state has from time to time appropriated various sums for permanent improvements, as well as for maintenance. The present value of the entire property and assets is estimated at $1,600,000.

The institution was incorporated February 28, 1867, under the name of the Illinois Industrial University, and placed under the control of a Board of Trustees, constituted of the Governor, the Superintendent of Public Instruction and the President of the State Board of Agriculture, as ex-officio members, and twenty-eight citizens appointed by the Governor. The chief executive officer, usually called President, was styled Regent, and was made ex officio a member of the board, and presiding officer both of the Board of Trustees and of the Faculty.

In 1873 the Board of Trustees was reorganized, the number of appointed members being reduced to nine and of ex-officio members to two—the Governor and the President of the State Board of Agriculture. In 1887 a law was passed making membership elective, at a general state election, and restoring the Superintendent of Public Instruction as an ex-officio member. There are, therefore, now three ex-officio members and nine by public suffrage. Since 1873 the President of the Board has been chosen by the members from among their own number for a term of one year.

The University was opened to students March 2, 1868, when there were present, beside the Regent, three professors and about fifty students. During the first term another instructor was added, and the number of students increased to 77—all young men.

During the first term instruction was given in algebra, geometry, physics, history, rhetoric, and Latin. Work on the farm and gardens or about the buildings was at first compulsory for all students, but in March of the next year
compulsory labor was discontinued, save when it was made to serve as a part of class instruction. A chemical laboratory was fitted up during the autumn of 1868. Botanical laboratory work began the following year. In January, 1870, a mechanical shop was fitted up with tools and machinery, and here was begun the first shop instruction given in any American university. During the summer of 1871 the present Wood Shops and Testing Laboratory was erected and equipped for students' shop work in both wood and iron.

By vote, March 9, 1870, the Trustees admitted women as students. During the year 1870-71 twenty-four availed themselves of the privilege. Since that time they have constituted from one-sixth to one-fifth of the total number of students.

By the original state law certificates showing the studies pursued and the attainments in each were given instead of the usual diplomas and degrees. The certificates proved unsatisfactory to the holders, and in 1877 the legislature gave the University authority to confer degrees.

In 1885 the legislature changed the name of the institution to the "University of Illinois."

During the same session of the legislature a bill was passed transferring the State Laboratory of Natural History from the Illinois State Normal University to the University of Illinois. This Laboratory was created by law for the purpose of making a natural history survey of the state, the results of which should be published in a series of bulletins and reports, and for the allied purpose of furnishing specimens illustrative of the flora and fauna of the state to the public schools and to the state museum. For these purposes direct appropriations are made by the legislature from session to session. A large amount of material has been collected and extended. Publications have been made in both the forms above mentioned.

By an act approved March 2, 1887, the national government appropriated $15,000 per annum to each state for
the purpose of establishing and maintaining, in connection with the colleges founded upon the congressional act of 1862, agricultural experiment stations, "to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture, and to promote scientific investigation and experiment respecting the principles and applications of agricultural science." Under this provision the Agricultural Experiment Station for Illinois was placed under the direction of the Trustees of the University, and a part of the University farm, with buildings, was assigned for its use. At least one bulletin of results is published every three months, and the copies are gratuitously distributed over the state. Editions of 18,000 copies are now issued.

For the more complete endowment of the state institutions founded upon the act of 1862, the congress of the United States, by a supplementary law passed in 1890, made further appropriations. Under this enactment each such college or university received the first year $15,000, the second $16,000, and thereafter was to receive $1,000 per annum additional to the amount of the preceding year, until the amount reached $25,000, which sum was to be paid yearly thereafter.

The Chicago College of Pharmacy, founded in 1859, became the School of Pharmacy of the University of Illinois May 1, 1896. Its rooms are at 465 State Street, Chicago.

At the meeting of the Board of Trustees of the University held Dec. 8, 1896, upon recommendation of President Draper, the Trustees voted to take steps looking to the organization of a law school. Appropriations were made for salaries, for the purchase of books, and for incidental expenses. Pursuant to this action of the Board of Trustees, the School of Law was organized during the following spring and summer, and was opened Sept. 13, 1897. The course as originally planned covered two years, conforming to the existing requirements for admission to the bar in Illinois. The supreme court of the state, however, announced
in November following rules covering examinations for admission to the bar which made three years of study necessary, and the course of study in the Law School was immediately rearranged on that basis.

Negotiations looking to the affiliation of the College of Physicians and Surgeons, of Chicago, with the University, which had been going on for several years, were concluded pursuant to action taken by the Board of Trustees upon definite propositions submitted by the College of Physicians and Surgeons to the Board at its meeting of March 9, 1897. According to the agreement made, the College of Physicians and Surgeons became on April 21, 1897, the *College of Medicine of the University of Illinois*. The College is located at 813 W. Harrison Street, Chicago.

At the meeting of the Board of Trustees held April 22, 1897, the matter of the appointment of a librarian was considered by the Board and referred to a committee. This action of the Board was taken with the view of bringing to the University the School of Library Economy, which had been established in 1893 at the Armour Institute of Technology, in Chicago, and of securing the Director of that school for librarian of the University library. These plans were carried out and the *State Library School* was opened at the University in September, 1897.

**BUILDINGS AND GROUNDS**

The land occupied by the University and its several departments embraces about 210 acres.

*The Chemical Laboratory* is a building 75 by 120 feet, and two stories high, with basement. It contains general laboratories for students, instructors' laboratories, lecture rooms, store rooms, scale rooms, and various apartments for special purposes.

*Engineering Hall* has a frontage of 200 feet, a depth of 76 feet on the wings and 138 feet in the center. The first story contains the laboratories of the department of physics, the drafting seminary, and one of the recitation rooms of the
department of electrical engineering, and the masonry laboratories and instrument rooms of the department of civil engineering. The second story contains the lecture room and the preparation rooms of the department of physics, and the recitation and drawing rooms, cabinets, and studies of the departments of civil and municipal engineering, and the main office of the department of electrical engineering. The third story contains the elementary laboratory of the department of physics, the drawing rooms, lecture rooms, cabinets, and studies of the mechanical departments, as well as the library, the office, and the faculty parlor. The fourth story is devoted to the department of architecture, and contains drawing and lecture rooms, cabinets, a photo studio, and a blue-print laboratory.

*The Wood Shops and Testing Laboratory* is two stories high, 126 feet in length, and 88 feet in width, and contains the laboratory of applied mechanics, the hydraulic laboratory, and the wood shop on the first floor. The second floor is occupied by the *Men's Gymnasium*.

*The Metal Shops* is a one-story brick building, 50 by 250 feet. It contains a lecture room, two office rooms, a machine shop, a foundry, and a forge shop. The machine shop is 48 by 140 feet. Power is supplied by a 20 H. P. electric motor. A three-ton traveling crane of 12 foot span covers the center of the floor for the entire length, extending over a covered driveway between the machine shop and foundry.

*The Mechanical and Electrical Engineering Laboratory* is a pressed brick building, two stories high, 100 feet long and 50 feet wide, with a one-story wing 90 feet long and 50 feet wide. There is also a basement under the main part, containing some special testing rooms, store rooms, and the toilet and wash rooms.

*The Central Heating Station* is a brick building, 55 by 120 feet. It contains the apparatus used for heating the buildings on the campus. An annex contains the pump room and the stock room. The pipes of the heating system and the wires for power and light are carried from the
Central Heating Station to the several buildings through brick tunnels $6\frac{1}{2}$ feet high by 6 feet wide. The length of tunnel thus far constructed is 1,800 feet.

The Armory, 100 by 150 feet, in one grand hall, gives ample space for company and battalion maneuvers and for large audiences upon special occasions.

Natural History Hall is 134 by 94 feet, with basement, two main stories, and an attic. It is occupied by the departments of botany, zoölogy, physiology, mineralogy, and geology, for each of which there are laboratories, lecture rooms, and offices; it also contains the office and equipments of the State Laboratory of Natural History, and of the State Entomologist, as well as the office, library, and chemical laboratory of the Agricultural Experiment Station. There are six laboratory rooms on each of the main floors—sufficient altogether to accommodate two hundred students, besides offering abundant facilities for the private work of the instructors.

The Astronomical Observatory is in the form of the letter T, the stem of which extends toward the south. The equatorial room, surmounted by the dome, is at the intersection of the stem and bar of the T. Besides the equatorial room the Observatory contains four transit rooms, a clock room, a recitation room, a study, and dark rooms for photographic purposes.

University Hall occupies three sides of a quadrangle, measuring 214 feet in front and 122 feet upon the wings. It is devoted almost exclusively to class rooms.

The Library Building is 167 by 113 feet, with a tower 132 feet high. The main floor contains the reference room, the reading room, the conversation room, the Library School lecture room, and the delivery room, which opens into the second story of the book-stack. The second floor contains the Library School class room, four seminary rooms, and the administrative offices of the University. The basement contains well lighted rooms, which are at present used for various purposes. The book-stack is a rear wing to the building,
separated from the rest of it by a fireproof wall. The stack will eventually contain five stories, and will accommodate 150,000 volumes. At present but three stories are fitted with shelving.

*An Agricultural Building,* costing $150,000, will be ready for occupancy September 1, 1900. It consists of four separate structures built around an open court and connected by corridors. The main building is 248 feet long, from 50 to 100 feet in depth and three stories high, and contains offices, class rooms, and laboratories for the departments of agronomy, animal husbandry, dairy husbandry, horticulture, and veterinary science; offices of the State Entomologist; the chemical laboratory of the Experiment Station; commodious administration rooms; an assembly room with a seating capacity of 500, and on each floor a fireproof vault for records. The other three buildings are each 45x116 feet and two stories high; one is for dairy manufactures, one for farm machinery, and one for veterinary science and stock judging. An adjacent glass structure serves the departments of agronomy and horticulture.

The building is of stone and brick, roofed with slate, and contains, all told, 113 rooms and a total floor space of nearly two acres.

There are, in addition to these buildings, a veterinary hall, four dwellings, three large barns, and a greenhouse.

**THE GYMNASIUMS**

*The Men's Gymnasium* is equipped with the latest appliances. There is an unobstructed floor space of 61 by 121 feet, properly lighted, heated, and ventilated. The building contains shower baths, needle bath, tub bath, lavatories, team rooms, lecture room, examination room, director's offices, and locker rooms. The gymnasium is open from 9 a. m. to 6 p. m., and from 7 to 9 p. m. The adjoining Illinois Field, 450 by 700 feet, containing a one-third-mile running and bicycle track, class and University foot-ball fields, and base-
ball diamond, serves well for all games, and upon it take place all the intercollegiate contests.

*The Women's Gymnasium* occupies very attractive quarters in Natural History Hall, and is fully equipped. The pastime grounds near by, in use through the year when the weather permits, have a sixteen-lap running track, eight tennis courts, two basket ball fields, and space for handball, hurdling, and other desirable amusements. Under suitable restrictions, at certain hours, the rooms are open for exercise to those who are not enrolled in the classes.

LABORATORIES

SCIENCE LABORATORIES*

The *botanical, geological, physiological, and zoological laboratories* are in Natural History Hall.

The *chemical laboratory* occupies the building of the same name, already described.

The *physical laboratory* is in Engineering Hall. It is provided with piers, a constant temperature room, and other conveniences for measurement work.

The *psychological laboratory*, in Natural History Hall, is well provided with apparatus of many different kinds for use in experimental study, research, and instruction.

ENGINEERING LABORATORIES

The *cement laboratory* of the department of civil engineering occupies rooms in Engineering Hall.

The *electrical engineering laboratory* occupies space on three floors of the Mechanical and Electrical Engineering Laboratory.

The *mechanical engineering laboratory* occupies the rear wing of the Mechanical and Electrical Engineering Laboratory.

The *laboratory of applied mechanics* is located in the Wood Shops and Testing Laboratory.

*For a more detailed account of these laboratories, see under the appropriate College.*
SPECIAL LABORATORIES FOR RESEARCH

The chemical laboratory of the Agricultural Experiment Station occupies a part of the basement of Natural History Hall, and the laboratory for the physical and bacteriological examination of soils is situated in the basement of University Hall, but both will be quartered in the Agricultural Building when it is completed.

The laboratory rooms of the State Laboratory of Natural History are in Natural History Hall.

A Biological Station, equipped for field and experimental work in aquatic biology, is maintained on the Illinois River by the State Laboratory of Natural History. It has its separate staff, but is open to students of the University at all times, on application, and during the summer months to special students not connected with the University.

A laboratory for sanitary water analysis has been equipped with all necessary appliances, and chemical investigation of the water supplies of the state is carried on.

COLLECTIONS*

AGRICULTURAL

A large room in University Hall is devoted to the exhibition of the products of the industrial arts, especially of agriculture. Prominent among the agricultural specimens exhibited is an excellent collection of the sub-species and varieties of Indian corn. There is also a collection of small grains and of grasses; a collection of fibers in various states of manufacture, and a large collection illustrating the forestry of Illinois, Florida, and California. The exhibits made by the University at the Centennial and at the Cotton Exposition at New Orleans find a permanent abode here; large additions have also been made of materials received from the Columbian Exposition of 1893.

* For a more detailed account of the collections in the different departments, see the appropriate subject under each College.
BOTANICAL

The herbarium contains nearly all the species of flowering plants indigenous to Illinois, including a complete set of grasses and sedges. The flora of North America is fairly well represented, and a considerable collection of foreign species has been made. A collection of fungi includes a full set of those most injurious to other plants, causing rusts, smuts, molds, etc. A collection of wood specimens from two hundred species of North American trees well illustrates the varieties of native wood.

Plaster casts represent fruits of many of the leading varieties as well as interesting specimens of morphology, showing peculiarities of growth, effects of cross-fertilization, etc.

ENGINEERING

The following departments of the College of Engineering have made extensive and valuable collections, which will be found in rooms in Engineering Hall:

ARCHITECTURE

A large number of specimens of stone, bricks, terra cotta, sanitary fixtures, casts of moldings and of ornament have been accumulated, together with some excellent specimens of industrial arts, models of structures, working drawings of important buildings, 3,000 lantern slides, 20,000 plates and photographs, and an excellent working library.

CIVIL ENGINEERING

The civil engineering department has a large room containing samples of iron, steel, wood, brick, and stone; materials for roads and pavements; models of arches and trusses, one of the latter being full-sized details of an actual modern railroad bridge. The department also possesses a very large collection of photographs and blue-print working drawings of bridges, metal skeleton buildings, masonry structures, and standard railroad construction.
ELECTRICAL ENGINEERING

The department has a collection of samples illustrating standard practice in the industrial applications of electricity. There is also a rapidly growing collection of lantern slides, photographs, blue-prints, drawings, pamphlets, and other engineering data.

MECHANICAL ENGINEERING

This department has among other things a partial set of Reuleaux models, together with models of valve gears, sections of steam pumps, injectors, valves, skeleton steam and water gauges, standard packings, steam-pipe coverings, and drop forgings. There are also fine examples of castings, perforated metal, defective boiler plates, and sets of drills, with numerous samples of oil, iron, and steel. A large number of working drawings from leading firms and from the United States Navy Department forms a valuable addition to the above collections.

GEOLOGICAL

Lithology is represented by type collections of rocks (5,500 specimens), arranged to illustrate Rosenbusch; from Voigt and Hochgesang, L. Eger, and A. Kranz; a type collection from Ward; 745 thin sections of rocks and minerals; a large number of ornamental building stones; a stratigraphic collection to illustrate Illinois geology, and a collection of Illinois soils (104).

The mineralogical collection is especially rich in rock-forming minerals, ores, and materials of economic value. It contains over 10,900 specimens carefully selected to meet the wants of the student, and 575 crystal models.

The paleontological collection (45,000 specimens) contains representative fossils from the entire geologic series. It embraces the private collections of A. H. Worthen (including 742 type specimens); Tyler McWhorter; Mr. Hertzer; 200 thin sections of corals; the Ward collection of casts, and a considerable number of special collections representing the fauna and flora of particular groups.
The zoological collections have been specially selected and prepared to illustrate the courses of study in natural history, and to present a synoptical view of the zoology of the state.

The mounted mammals comprise an unusually large and instructive collection of the ruminants of our country, including male and female moose, elk, bison, deer, antelope, etc., and also several quadrupedal, large carnivora and fur-bearing animals, numerous rodents, good representative marsupials, cetaceans, edentates, and monotremes. Fifty species of this class are represented by eighty specimens and all the orders, excepting the Proboscidea, are represented by mounted skeletons. There is also a series of dissections in alcohol, illustrating the comparative anatomy of the group.

The collection of mounted birds includes representatives of all the orders and families of North America, together with a number of characteristic tropical, Bornean, and New Zealand forms. The collection is practically complete for Illinois species. There is also a fine collection of the nests and eggs of Illinois birds. A series of several hundred unmounted skins is available for the practical study of species, and the internal anatomy is shown in alcoholic dissections and in mounted skeletons of all the orders.

The cold-blooded vertebrates are represented by a series of mounted skins of the larger species, both terrestrial and marine; mounted skeletons of typical representatives of the principal groups; alcoholic specimens, both entire and dissected, and casts. The alcoholics include series of the reptiles, amphibians, and fishes, the latter comprising about three hundred species. The dissections illustrate the internal anatomy of the principal groups. The casts represent about seventy-five species, nearly all fishes.

The Mollusca are illustrated by alcoholic specimens of all classes and orders, and dissections showing the internal anatomy of typical forms. There are several thousand shells
belonging to seventeen hundred species. The collection of Illinois shells is fair but incomplete.

Of the Arthropoda the entomological cabinet contains about three thousand species (principally American), named, labeled, and systematically arranged. There is also a series of Crustacea, some dried, but mostly in alcohol, the latter including a number of dissections.

The lower invertebrates are represented by several hundred dried specimens and alcoholics, and by a large series of the famous Blaschka glass models.

The embryology of vertebrates and invertebrates is illustrated by a set of Ziegler wax models, and several series of slides, sections, and other preparations.

In addition to the above, the extensive collections of the State Laboratory of Natural History are available for illustrative purposes, as well as for original investigation by advanced students.

ART GALLERY

The University art gallery was the gift of citizens of Champaign and Urbana. It occupies a room in the basement of Library Building, and furnishes an excellent collection of models for students of art. In sculpture it embraces thirteen full-size casts of celebrated statues, forty statues of reduced size and a large number of busts and bas-reliefs, making in all over four hundred pieces. It includes also hundreds of large autotypes, photographs, and fine engravings, representing many of the great masterpieces of painting of nearly all the modern schools, and a gallery of historical portraits, mostly large French lithographs, copied from the great national portrait galleries of France.

Other collections of special value to art students embrace a large number of casts of ornament from the Alhambra and other Spanish buildings, presented by the Spanish government; a set of casts from Germany, illustrating German renaissance ornament; a series of art works from the Columbian Exposition; large numbers of miscellaneous
casts, models, prints, and drawings, such as are usually found in the best art schools, and a model in plaster and a complete set of drawings of a competitive design by Henry Lord Gay for a monument to be erected in Rome, commemorative of Victor Emanuel, first king of Italy.

LIBRARY FACILITIES

The library contains 44,000 volumes and 3,500 pamphlets. The reading room contains 411 periodicals. The library of the State Laboratory of Natural History and that of the Agricultural Experiment Station contain about 9,500 volumes and 17,000 pamphlets. Both these libraries are open to students of the University.

The Public Library of the City of Champaign has recently become the possessor of the valuable library of western history collected by the late Edward G. Mason, Esq., President of the Chicago Historical Society. The collection is thus made accessible to University students.

The library and the reading room are open every day, except Sunday, from 8 a.m. until 5 p.m., and from 6:30 p.m. until 9 p.m. on Mondays, Tuesdays, Wednesdays and Thursdays.
ADMISSION

Applicants for admission to the freshman class must be at least sixteen years of age.

Entrance may be made at any time, provided the candidate is competent to take up the work of the classes then in progress; but it is better to begin upon the first collegiate day in September.

Admission to the freshman class of the University may be obtained in one of three ways: (a) by certificate from a fully accredited high school; (b) by examination; (c) by transfer of credits from some other college or university.

ADMISSION BY CERTIFICATE FROM ACCREDITED HIGH SCHOOLS

The University employs a high school visitor, whose business it is to inspect the high schools of the state. The University bears the expense of such inspection, but does not send the visitor to any school not already accredited until he receives from it a report with regard to the work it is doing which shows that its course of study is such in quantity and quality as to be worth the time and attention of the University. After inspecting a school the visitor reports upon it to the Faculty of the University, and upon approval the school is added to the list of accredited schools. Students coming to the University from an accredited school are excused from entrance examinations in those subjects which they have pursued there satisfactorily and which are accepted for admission to the University. The University accredits all work which is sufficiently well done. The schools in the list below are therefore not all accredited for the same amount and kind of work.

In all subjects required for admission to the University, other than those for which his school is accredited, the can-
Candidate for admission must pass an examination or take the work in the Preparatory School of the University.

Candidates for admission from accredited schools must file with the Registrar, upon entrance, a certificate of graduation and a certified list of the preparatory studies for which they received credit in the high school. Blanks for these certificates must be obtained from the Registrar in advance, and it is better to forward them to him for approval before registration days.

ADMISSION BY EXAMINATION

Examinations of candidates for admission to the University are held at the University in September (see program, p. 53). Each candidate must be in attendance during the whole period of the examinations.

The scholarship examinations,* held each year on the first Saturday in June, in the several counties of the state, afford an opportunity to pass the entrance examinations.

*See State Scholarships.
before coming to the University, since these examinations are
taken as equivalents of the regular entrance examinations.

The subjects upon which the entrance examinations are
held are described below.

Text-books are named merely to aid in showing the
requirements. Equivalents are accepted.

In all cases 36 credits are required, the term credit
meaning the work in one subject continuously pursued, with
daily recitations, through one of the three terms of the high
school year; or, in other words, the work of sixty recitation
periods of forty minutes each, or the equivalent in laboratory
or other practice. Of these 36 credits, 28 must be obtained
by all candidates in the subjects, and according to the valua-
tion, stated in the prescribed list given below. The
remainder of the 36 may be made up by offerings in any of
the subjects in the elective list given below, with the follow-
ing restrictions and provisions:

1. No offering will be accepted in any one of these elec-
tive subjects unless at least equal in quantity to the min-
imum specified in the table. For example: Astronomy is
listed for from 1 to \(1\frac{1}{2}\) credits. Nothing less than one
term's work, that is, one credit, will be accepted, therefore,
in that subject.

2. Those who wish to enter upon the courses leading to
the degree of bachelor of arts must offer at least three credits
in some one foreign language, chosen from among the elec-
tives, in addition to the language chosen from among the
prescribed subjects in the first list. The language from the
elective list may or may not be the same as that offered in
the prescribed list. Those who wish to pursue the study of
Latin or Greek in the University must, however, offer nine
credits in Latin or six in Greek, respectively.

3. Those who wish to enter upon the courses leading to
the degree of bachelor of science, in any line of study except
agriculture, must offer solid and spherical geometry among
their electives.

4. For entrance upon the agricultural courses leading to
the degree of bachelor of science, any six credits from the elective list will be accepted instead of the six credits in foreign language; but at least two years of foreign language study in the University must be taken by those who make this option.

The amount of work in each subject which, in the judgment of the University authorities, corresponds to the minimum number of credits assigned is shown by the description of subjects below.

**DESCRIPTION OF SUBJECTS ACCEPTED FOR ADMISSION**

1. **ALGEBRA.**—Fundamental operations, factoring, fractions, simple equations, involution, evolution, radicals, quadratic equations and equations reducible to the quadratic form, surds, theory of exponents, and the analysis and solution of problems involving these.

* But see par. 4 above.
The subject as given in Wells's Higher Algebra through quadratic equations, or the same work in Wentworth's Algebra, or an equivalent.

2. **Astronomy.**—To obtain a single credit for entrance in astronomy, the student must pass an examination covering as much text-book work as is contained in Young's Elements of Astronomy, Todd's New Astronomy, or Howe's Descriptive Astronomy. For 1½ credits, the entrance requirement implies, in addition to the above, some degree of practical familiarity with the geography of the heavens, with the various celestial motions, and with the positions of some of the more conspicuous naked-eye heavenly bodies.

3. **Biology.**—The subject as taught in good high schools with laboratory equipment. For the minimum number of credits, one year's work upon such types as are presented in Huxley and Martin's Practical Biology, or Parker's Elementary Biology. For further credits, advanced laboratory work and field collections. Note-books, drawings, collections of specimens, etc., showing work done, must be presented.

4. **Botany.**—A familiar acquaintance is required with the general structure of plants, and of the principal organs and their functions, derived to a considerable extent from a study of the objects; also a general knowledge of the main groups of plants, and the ability to classify and name the more common species. Bergen's Elements of Botany, or Spaulding's Introduction to Botany, indicates the kind of preparation required. Laboratory note-books and herbarium collections must be presented.

5. **Chemistry.**—The instruction must include both text-book and laboratory work. The work should be so arranged that at least one-half of the time shall be given to the laboratory. The course, as it is given in the best high schools in two terms or three terms, respectively, will satisfy the requirements of the University for the two credits or three credits for admission. Remsen's Introduction to Chemistry, Storer and Lindsey's Manual of Elementary Chemistry, and Newth's Elementary Chemistry, are acceptable text-books. The laboratory notes, bearing the teacher's indorsement, must be presented in evidence of the actual laboratory work accomplished. Candidates for admission may be required to demonstrate their ability by laboratory tests.

6. **Civics.**—Such amount of study on the United States constitution, its history and interpretation, as is indicated by any of the usual high school text-books on civil government, is regarded
as sufficient for one term. The work may advantageously be combined with the elements of political economy, or, better, the industrial history of the country.

7. **Composition and Rhetoric**—Correct spelling, capitalization, punctuation, paragraphing, idiom, and definition; the elements of rhetoric. The candidate will be required to write two paragraphs of about one hundred and fifty words each to test his ability to use the English language. The subject as presented in Genung's Outlines of Rhetoric, Scott and Denney's English Composition, or an equivalent.

8. **Drawing**.—Free-hand or mathematical drawing, or both. Drawing-books or plates must be submitted. The number of credits allowed depends on the quantity and quality of the work submitted.

9. **English Literature**.—(a) Each candidate is expected to have read certain assigned literary masterpieces, and will be subjected to such an examination as will determine whether or not he has done so. The books assigned for the next three years are as follows:

**1900.**—Dryden's Palamon and Arcite; Pope's Iliad, Books I., VI., XXII., and XXIV.; The Sir Roger de Coverley Papers in the Spectator; Goldsmith's Vicar of Wakefield; De Quincey's Flight of a Tartar Tribe; Cooper's Last of the Mohicans; Lowell's Vision of Sir Launfal; Scott's Ivanhoe.

**1901.**—George Eliot's Silas Marner; Pope's Iliad, Books I., VI., XXII., and XXIV.; The Sir Roger de Coverley Papers in the Spectator; Goldsmith's Vicar of Wakefield; Coleridge's Ancient Mariner; Cooper's Last of the Mohicans; Tennyson's Princess; Shakspere's The Merchant of Venice; Scott's Ivanhoe.

**1902.**—The same as 1901.

(b) In addition to the above the candidate will be required to present a careful study of the history of either English or American Literature.

(c) The candidate will be examined on the form and substance of one or more books, in addition to those named under (a). For 1900, 1901, and 1902 the books will be selected from the lists below. The examination will be of such a character as to require a minute and thorough study of each of the works named, in order to pass it successfully.

**1900.**—Shakspere's Macbeth; Milton's Paradise Lost, Books I. and II.; Burke's Speech on Conciliation with America; Macaulay's Essays on Milton and Addison; Tennyson's The Princess.
1901.—Shakspeare's Macbeth; Milton's L'Allegro, II Penseroso, Comus, and Lycidas; Burke's Speech on Conciliation with America; Macaulay's Essays on Milton and Addison.

1902.—The same as 1901.

Two years of high school work, with five recitations per week, will be necessary for the above preparation.

10. FRENCH.—*One year's work.*—The candidate must have a thorough knowledge of elementary grammar and the irregular verbs; must be able to pronounce correctly, and to translate simple spoken French phrases. He must have read some 300 pages of easy prose, including one modern comedy, and must be able to translate ordinary French prose at sight.

*Two years' work.*—In addition to the above, the candidate must show proficiency in advanced grammar, the essentials of syntax, and elementary composition. The reading of not less than 400 pages of standard authors, including two plays of Molière, is required, and the memorizing of not less than six fables or anecdotes.

*Three years' work.*—In addition to what has already been described, the candidate must have had further work in composition, and must have memorized not less than six poems or anecdotes. He must further have read not less than 500 pages of standard authors, including Molière, La Fontaine, and Hugo. Some acquaintance with modern lyrics is necessary.

11. GEOLOGY.—Familiarity with the matter found in Scott's *Introduction to Geology,* or a real equivalent. The student must be able to recognize well-marked types of crystalline and fragmental rocks, and to explain the origin of the topography of the region in which he lives. Additional laboratory and field work will be given such credit as it merits.

12. GEOMETRY.—Plane Geometry, as given in Wells's or Wentworth's *Geometry,* or an equivalent. Great importance is attached to the ability of the student to solve original problems.

Solid and Spherical Geometry, as given in Wells's or Wentworth's *Plane and Solid Geometry,* or an equivalent.

13. GERMAN.—*One year's work.*—Elementary grammar, especially declension of articles and ordinary nouns and pronouns, use of the strong and the weak adjective, the two conjugations of verbs, with the principal parts and meanings of all the strong verbs, separable and inseparable prefixes, the use of common prepositions, the inverted and transposed sentence order. Practice in writing German sentences should accompany this work throughout the
course, but the German script is not insisted upon. Besides the work in grammar, the student should read not less than 150 pages of easy narrative or descriptive prose, giving careful attention to its translation into good English.

Two years' work.—In addition to the work outlined under the one year's requirement, the pupil should know the syntax of cases, uses of the subjunctive and infinitive, complex sentence structure, uses of modal auxiliaries and of participial constructions. The translation into German of about thirty-five pages of narrative prose should insure ready application of grammatical principles. As an additional reading requirement, from 250 to 300 pages, including one of Schiller's historical dramas, and about thirty pages of German lyrics, should be translated. Constant practice in reading German should secure an accurate pronunciation and a feeling of the rhythm and rhetorical form of the works studied.

Three years' work.—The third year's study should aim to secure an easy reading knowledge of the language. Accurate and idiomatic translations into English, constant practice in sight translation and in writing from dictation should be insisted upon. Standard prose of the grade represented by Heine, Freytag, or Dahn, not less than 100 pages should be read, together with selections from classic poetry. Lessing's Minna von Barnhelm and Goethe's Egmont or Iphigenie auf Tauris are especially recommended. Additional work in prose composition, or in the writing of paraphrases of the texts read, should insure the ability to write simple German.

14. Greek.—To obtain three credits, the exercises in any of the beginning books, and one book of the Anabasis, or its equivalent, must be offered. For six credits, two books of the Anabasis and three of Homer, or their equivalents, additional to the above, must be presented, together with an amount of Greek prose composition equal to that given in Woodruff's Greek Prose Composition.

15. History.—At least one year in one of the following subjects: (a) The History of England and of the United States; (b) General History; (c) The History of Greece and Rome. The statement of requirements in each subject implies the use of a substantial text-book, together with some elementary training in the use of reference books.

16. Latin.—One year's work.—Such knowledge of inflections and syntax as is given in any good preparatory Latin book, together with the ability to read simple fables and stories.

Two years' work.—Four books of Cæsar's Gallic War, or its
equivalent in Latin of equal difficulty. The ability to write simple Latin based on the text.

Three years' work.—Six orations of Cicero. The ability to write simple Latin based on the text. The simpler historical references and the fundamental facts of Latin syntax.

Four years' work.—The scansion of hexameter verse, six books of Vergil, with history and mythology.

17. Manual Training.—Experience in the use of wood-working tools will be required. Forge, foundry, or machine work may be substituted for wood work. The number of credits allowed will depend upon the time spent upon the subjects and the technical knowledge obtained.

18. Physical or Biological Science.—For this there may be offered any one of the following subjects or combination of subjects: Physics, one year; chemistry, one year; botany and zoology, each a half year; biology, the study of plant or animal types, one year.

The subjects must be taught in part by laboratory methods and the pupil's note-books must be submitted. Other evidences of work done, as illustrative drawings, collections of specimens, etc., should be presented. Examinations cover the subject-matter as presented in text-books in most common use in high schools. See also the descriptions given under the several subjects.

19. Physics.—The elements of physical science as presented in such text-books as Appleton's School Physics, or Avery's Elements of Natural Philosophy, or Carhart and Chute's Elements of Physics, or Gage's Elements of Physics. The candidate must have had laboratory practice equivalent to that described in the laboratory text-books of Hall and Bergen, Allen, or Chute. The candidate's laboratory note-book will be accepted as part of the examination.

20. Physiography.—The amount and character of the work required for the minimum credit may be seen by referring to Mill's Realm of Nature, or Davis's Physical Geography.

For additional credits, the principles of climatology, ability to read physical and contour maps, interpretation of weather maps, and forecasting of weather, etc., will be considered.

21. Physiology.—For one credit are required the anatomy, histology, and physiology of the human body and the essentials of hygiene, taught with the aid of charts and models to the extent given in Martin's Human Body (Briefer Course). For more than one credit, the course must have included practical laboratory work on the part of the student. The number of credits, beyond one,
will be determined in each case according to the quantity and quality of the work.

22. **Zoology.**—Field, laboratory, and text-book work to the amount of a half year in the high school. Needham's Lessons in Zoology, and the zoological part of Huxley and Martin's Practical Biology, and of Parker's Elementary Biology, are examples of satisfactory laboratory guides. Note-books, drawings, etc., showing the student's work, must be presented.

PROGRAM OF EXAMINATIONS, SEPTEMBER 13-18, 1900

All persons who wish to enter the University in September, 1900, except those holding certificates of graduation from accredited schools and scholarship certificates, and those for whom a transfer of all entrance credits from some other college or university has already been approved, must present themselves at the Registrar's office, Library Hall, at 9 o'clock a.m., Thursday, September 13th. At that time applications for admission will be received, and applicants will be given all necessary directions as to examinations.

The program of examinations is as follows:

The examinations in 1901 will begin on Wednesday, September 11th.
ADMISSION BY TRANSFER FROM OTHER COLLEGES AND UNIVERSITIES

A person who has entered another college or university of recognized standing will be admitted to this University upon presenting a certificate of honorable dismissal from the institution from which he comes and an official statement of the subjects upon which he was admitted to such institution, provided it appears that the subjects are those required here for admission by examination, or real equivalents. Candidates, to enter the University in this way, should submit such papers to the Registrar before the time of entrance, so that all doubtful points may be cleared up in advance.

ADMISSION AS SPECIAL STUDENTS

Persons over twenty-one years of age, not candidates for a degree, may be admitted to classes, after satisfying the President and the professor in charge of the department in which such classes are taught, that they possess the requisite information and ability to pursue profitably, as special students, the chosen subjects. Such students are not matriculated; they pay a tuition fee of seven dollars and a half a semester, in addition to the regular incidental fee of twelve dollars.

In the College of Agriculture special students may be received at sixteen years of age subject to the same conditions as other special students, except that they may hold scholarships in agriculture (p. 272).

ADMISSION TO ADVANCED STANDING

After satisfying in some of the ways already enumerated all the entrance requirements for admission to the University, and after matriculating, the applicant for advanced standing may secure such standing either by examination or by transfer of credits from some other college or university.

1. By Examination.—Candidates for advanced standing, not from other colleges or universities, may secure such standing on examination. In the case of freshman students
seeking advanced standing on the basis of their preparatory work, such standing shall be granted after satisfactory examination only, unless the applicants are from fully accredited schools. In that case a transfer of credits may be made as provided below.

2. By Transfer of Credits.—Credits from other colleges or universities may be accepted by the Faculty for advanced standing; but at least one year’s work in residence at the University is required of all candidates for a bachelor’s degree.

In all cases a certificate of honorable dismissal is required, together with a certified record of work done in the institution from which the applicant comes. These should be presented for approval some time before the student enters for work.

Upon approval of the Faculty freshmen may receive credit for advanced work done in fully accredited high schools.

REGISTRATION

At the beginning of each semester each student must present himself for registration within the time set for that purpose, before the formation of classes, and he must be present at the first exercise of each class he is to attend.

EXAMINATIONS

Examinations are held as often as in the judgment of the instructor the necessities of the work require. Examinations are also given at the close of each semester, on the work of the semester, in all subjects except those whose character renders it unnecessary or impracticable.

A record is kept of each student’s standing.

SEMSTERS AND RECESS

The University year is divided into semesters each covering eighteen weeks of instruction. There is a recess of two weeks at the Christmas holidays.

For dates of opening and closing, see Calendar, p. 5.
GRADUATION

In all cases credit for one hundred and thirty "semester hours" (see p. 171) is required for graduation. The candidate for a degree in any course must complete all the subjects prescribed for graduation in that course, and when, in doing this, he does not gain the necessary credit of one hundred and thirty hours, he must make up the deficiency by the election of other courses.

The combinations of studies under which a student may graduate are too numerous to describe here; they are given under the separate colleges and schools.
GOVERNMENT

The government of the University is vested by the Trustees primarily in the President of the University, in the Faculty, in the Council of Administration, and in the Deans.

The President is the executive head of the University.

The Dean of the General Faculty has general oversight of the instructional work of the University, and especial supervision of the graduate school. By order of the Board of Trustees he also fills the office of Vice-President.

The Dean of each college is responsible for the enforcement of all University regulations within his college.

The Council of Administration is composed of the President, the Dean of the General Faculty, the Dean of the Woman's Department and the Deans of the separate colleges. It constitutes an advisory board to the President, and has exclusive jurisdiction over all matters of discipline.

The Council does not exercise general legislative functions, but when any matter arises which has not been provided for by common usage or by rule of the General Faculty, and which cannot be conveniently laid over till the next meeting of the General Faculty, the Council may act upon the same according to its discretion.

The determination of the general internal policy of the University is in charge of the Faculty.

The faculties of the different colleges and schools of the University are composed of the members of the corps of instruction of these colleges and schools, and have jurisdiction over all matters which pertain exclusively to these organizations, subject always to higher University authority.
ORGANIZATION

For the purpose of more efficient administration, the University is divided into several colleges and schools. This division does not imply that the colleges and schools are educationally separate. They are interdependent and together form a unit. In addition to the courses mentioned as given in each college and school, instruction in military science and physical training is provided. The organization is as follows:

I. The College of Literature and Arts.
II. The College of Engineering.
III. The College of Science.
IV. The College of Agriculture.
V. The Graduate School.
VI. The School of Library Science.
VII. The School of Music.
VIII. The College of Law.
IX. The College of Medicine.
X. The School of Pharmacy.

THE COLLEGE OF LITERATURE AND ARTS

The College of Literature and Arts offers—
1. General courses, offering a wide range of electives.
2. Specialized courses, or courses under the group system, including—
   a. The Classical Group.
   b. The English Group.
   c. The German and Romanic Language Group.
   d. The Latin and Modern Language Group.
   e. The Philosophical Group.
   f. The Political Science Group.

THE COLLEGE OF ENGINEERING

The College of Engineering offers courses—
1. In Architecture.
2. In Architectural Engineering.
3. In Civil Engineering.
4. In Electrical Engineering.
5. In Mechanical Engineering.
7. In Railway Engineering.

THE COLLEGE OF SCIENCE

The College of Science offers courses arranged in four groups, as follows—
1. The Chemical and Physical Group.
2. The Mathematical Group.
3. The Natural Science Group.
4. The Philosophical Group.

COLLEGE OF AGRICULTURE

The College of Agriculture offers—
1. Courses leading to Agronomy as a specialty.
2. Courses leading to Animal Husbandry as a specialty.
3. Courses leading to Dairy Husbandry as a specialty.
4. Courses leading to Horticulture as a specialty.
5. Courses leading to Veterinary Science as a specialty.

THE GRADUATE SCHOOL

The Graduate School offers courses in—
1. Agriculture.
2. Engineering.
3. Literature, Philosophy, and the Arts.
4. The Sciences.

An enumeration of the departments of graduate study is given at the beginning of "General Description of Courses," (p. 171), and the separate graduate courses offered are described in connection with the proper subjects in the list of courses which there follows.

THE SCHOOL OF LIBRARY SCIENCE

The School of Library Science, or the State Library School, offers a course of study, extending over four years, in preparation for the practice of the work of a librarian. The course leads to the degree of bachelor of library science.
THE SCHOOL OF MUSIC
The School of Music offers courses in vocal and instrumental music, leading to the degree of bachelor of music.

THE COLLEGE OF LAW
The College of Law offers a course of study leading to the degree of bachelor of laws.

THE COLLEGE OF MEDICINE
The College of Medicine offers a course of study leading to the degree of M.D.

THE SCHOOL OF PHARMACY
The School of Pharmacy offers a course in all branches necessary to a complete scientific and practical knowledge of pharmacy, including pharmacy, chemistry, materia medica, botany, physics, and physiology. The course leads to the degree of graduate in pharmacy or to that of pharmaceutical chemist.
COLLEGE OF LITERATURE AND ARTS

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
DAVID KINLEY, PH.D., DEAN, Economics.
THOMAS J. BURRILL, PH.D., LL.D., Botany.
SAMUEL W. SHATTUCK, C.E., Mathematics.
CHARLES W. ROLFE, M.S., Geology.
ARTHUR W. PALMER, Sc.D. Chemistry.
FRANK F. FREDERICK, Art and Design.
HERBERT J. BARTON, A.M., Latin.
CHARLES M. MOSS, PH.D., Greek.
DANIEL K. DODGE, PH.D., English.
ALBERT P. CARMAN, Sc.D., Physics.
EVARTS B. GREENE, PH.D., History.
KATHARINE L. SHARP, PH.M., B.L.S., Library Science.
GEORGE T. KEMP, M.D., PH.D., Physiology.
GEORGE W. MYERS, PH.D., Astronomy.
EDGAR J. TOWNSEND, PH.M., Mathematics. (On leave, 1899-1900.)
JACOB K. SHELL, M.D., Physical Training.
LEWIS A. REHOADES, PH.D., German.
JAMES B. SCOTT, J.U.D., Public Law.
THOMAS A. CLARK, B.L., Rhetoric.
ARTHUR H. DANIELS, PH.D., Philosophy.
GEORGE D. FAIRFIELD, A.M., Romanic Languages.
CHARLES W. TOOKE, A.M., Public Law and Administration.
NEWTON A. WELLS, M.P., Painting.
vioLET D. JAYNE, A.M., English.
HARRY S. GRINDLEY, SC.D., Chemistry.
EDWIN G. DEXTER, B.Pd., PH.D., Pedagogy.
HERMAN S PIATT, PH.D., Romanic Languages.
AIMS AND SCOPE

The College of Literature and Arts includes those branches usually comprised in a department of philosophy and arts, with the exception of the natural sciences. The aim of the College is a double one: to furnish a liberal education, and to afford opportunity for specialization in literature, philosophy, and the political sciences. It is believed that this double purpose can be accomplished best by a judicious combination of prescribed and elective studies, which, while so directing the work of the student as to secure the desired mental training, will allow him a considerable range of choice in the selection both of his main line of work and of subjects auxiliary thereto.

In conformity with this general plan, it is provided that students may graduate either under a system offering a choice of a considerable number of subjects, or under one in which the principal part of the student’s work is in a single line of study, or a group of related lines. The subjects which may be selected for this special study are listed as major electives on page 67. These two systems are named
respectively the general course system and the specialized course, or group, system.

The only degree given in this College is that of A.B.

THE GENERAL COURSE SYSTEM

In the General Course System it is planned to permit the student to select his studies from as wide a range of subjects as he pleases, restricted only by a certain minimum of prescribed work and by certain requirements as to the time which must be spent upon each subject in order to secure a reasonable degree of concentration. The prescribed subjects are part of the work of the first two years. So far as possible, the work of the freshman year must be made up wholly of prescribed subjects, and the rest of the prescribed work must be done in the sophomore year. Within the limits of the prescribed work, moreover, the student is permitted a choice of lines of study. For example, while a year of science is prescribed for all students, any one of the sciences may be chosen.

After finishing the prescribed subjects, each student must elect a sufficient number of courses to yield him the necessary credit for graduation. At least two electives must be pursued, each for two years, so that the student may secure twenty hours' credit in each. These two subjects are known as his majors. The word is applied in the general course system to any subjects primarily classed in the College of Literature and Arts, in which the student secures twenty hours' credit. The subjects are listed as major electives, on page 67. If the student pursues the study of any one of these subjects for less than two years, it is credited to him as a minor, as is also any subject not there listed, regardless of the time spent on it.

In the choice of his electives other than his majors, the student may take a minimum of work in each of a maximum number of subjects, or he may take a maximum amount of work in the minimum number of subjects necessary to fill up his time according to the rules of the University. The
elective minor courses open to the students of the College include subjects offered in the other colleges and schools of the University. The sciences are not an integral part of the work of the College of Literature and Arts, but they are so important a part of a liberal education that every student of the College is earnestly urged to extend his study of them so far as may be. Certain courses in the College of Engineering and in the College of Agriculture, although of a somewhat technical nature, may also be counted for credit in the College of Literature and Arts. These are more particularly mentioned under "minor courses," on page 68.

REQUIREMENTS FOR GRADUATION UNDER THE GENERAL COURSE SYSTEM

Credit for 150 hours (p. 171), including the prescribed military and physical training, is required for graduation under the general course system. Every student must take the prescribed subjects; in addition, he must select at least two subjects from the list of major electives, and he must then choose work sufficient to yield him the remainder of the required number of hours.

No credit is granted in any subject unless the student pursues it for the minimum time for which any course in the subject is offered. For example, if a student elects a course which yields two hours' credit for one semester,* he must stay in the class during the semester in order to get any credit at all. No credit is granted for less than ten hours' work in the first year of the study of any foreign language. After the first year credit may be obtained for the work of a single semester.

THE SPECIALIZED COURSE, OR GROUP, SYSTEM

A specialized, or group, course is one in which the student is required to pursue a single line of study for three consecutive years, in addition to doing the prescribed work and writing a thesis. At least twenty hours' work in the chosen subject must be done before the beginning of the senior year.

*See for example Civil Engineering 16, p. 202.
No student may be enrolled in a specialized course without the permission of the head of the department in which he wishes to do his principal work. The subject in which the thirty hours’ work is required is called the student’s major, and must be chosen from the list of major electives (p. 67).

As a rule, those students only who take a specialized course will be recommended from this College for fellowships, scholarships, and other university honors.

**REQUIREMENTS FOR GRADUATION UNDER THE SPECIALIZED COURSE, OR GROUP, SYSTEM**

Credit for 130 hours, including the prescribed military and physical training, together with an acceptable thesis, is required for graduation under the group system. Every student must take the prescribed subjects. Not later than the beginning of his junior year he must designate the group in which he wishes to be enrolled. He must at that time choose one subject in the group as his major, the study of which, alone or with the subjects designated as specifically preparatory to it, he must pursue during the remaining two years, and secure in it at least thirty hours’ credit in all. He must then select, with the approval of the head of the department in which his major subject belongs, a sufficient number of other studies to yield him the necessary number of hours.

A student in a specialized course must also present an acceptable thesis. This thesis must be on a topic connected with his major study, and must present the results of investigation made during the last year of the student’s course. The work of investigation must be the required work in the major subject, in whole or in part, during the student’s senior year.

As in the general course system, no credit is given for parts of courses, and at least one full year’s work must be done by those who begin a foreign language, in order to secure any credit therefor. The same work may not be credited both as major and minor.

The groups are as follows:

The *Classical Group*, including Greek and Latin as the
major subjects. One of these languages must be taken for thirty, the other for twenty, hours.

The English Group, including the Scandinavian languages. Students in this group must take two years of French or German before the beginning of the junior year, or must be able to read one of these languages easily. Those who elect the course in language must have at least two years of German.

The German and Romanic Language Group. Either German or French may be taken as a major, but twenty hours' credit in the other must be secured. Besides the required work in English, all students must elect additional English sufficient to make a total of at least ten hours. Students of marked ability, who take French as a major, are advised to take the courses offered in Spanish or Italian.

The Latin and Modern Language Group, including Latin, German, and French. Twenty hours' credit must be obtained in the language chosen for a minor.

The Philosophical Group, including pedagogy, philosophy, psychology, and mathematics as major subjects. In this group the second year of the student’s work is devoted to studies specifically preparatory to the principal subject, which is itself taken up at the beginning of the third year.

Students in this group who make philosophy a major must, in the second year, make ten hours of credit from among these subjects: Anthropology, psychology, economics 17 (sociology), Greek 5.

Those who make psychology their major subject must, in their second year, make ten hours from among these subjects: botany 1, 2; economics 17; philosophy 2, 6, 8; physiology 4; zoology 1.

When pedagogy is the major, the work specifically preparatory is logic (philosophy 1a or 1b), outlines of philosophy (philosophy 2), and elementary and educational psychology.

Those students who make mathematics their major work must take the courses in mathematics numbered 2, 4, 6, 7, 9,
io, 11, 15, 16, 17, and may elect as many more courses as desired. They must also make ten hours in philosophy, (including philosophy 1, a or b), and either twenty hours in German or ten in French.

The Political Science Group, including economics, history, and public law and administration. All students in this group must take the three elementary courses: history 1, economics 1, a and b, and public law and administration 1; and must also secure five hours in physiography, and at least three hours in philosophy, selected from courses 1, 2, 3, and 4. All students in the group must take at least one year's work in either French or German, before the beginning of the junior year, or must furnish satisfactory evidence of their ability to use at least one of the languages.

CLASSIFICATION OF SUBJECTS

PRESCRIBED

Advanced Algebra (Math. 1, 2); 2 or 3 hours.
English 1; 5 hours.
French 1, German 1 and 3, Greek 1, 2, or Latin 1; 10 hours.
Geometry, Solid and Spherical; 3 hours.
History, all of 1 or all of 2 and 6; 6 hours.
Logic (Philosophy 1a or 1b); 3 hours.
Military 1, 2; 5 hours.
Physical Training—
For men, 2½ hours.
For women, 3 hours.
Natural Science; 10 hours.
Rhetoric 1; 6 hours.
Trigonometry (Math. 3, 4); 3 or 2 hours.

ELECTIVE

MAJOR COURSES

Economics 1 to 19; 20 to 46 hours.
English 1 to 15; 20 to 40 hours.
French 1 to 4; 20 to 36 hours.
German 1, 3 to 13; 20 to 50 hours.
Greek 1 to 8; 20 to 30 hours.
History 1 to 10; 20 to 44 hours.
Latin 1 to 9; 20 to 50 hours.
Mathematics 1 to 25; 20 to 59 hours.
Pedagogy 1 to 4; 20 to 27 hours.
Philosophy 2 to 8; 20 to 21 hours.
Public Law and Administration 1 to 9; 20 to 38 hours.
Psychology.
Rhetoric 1 to 5; 20 to 36 hours.

MINOR COURSES

The necessary number of hours additional to those provided for in the prescribed subjects and the chosen major electives may be secured from any of the subjects offered in the College of Literature and Arts, or in the College of Science, the requirements for which the student can meet. But not more than twenty hours in Art and Design may be counted toward the degree, nor more than five hours in physical training, including the amount prescribed. Course 12 in library science may be taken as a minor. Certain courses offered in the College of Engineering may also be chosen; as, for example, history of architecture (Arch. 28); heating and ventilation (Arch. 13); domestic architecture (Arch. 27), etc.

The attention of young women is especially called to the courses grouped under Household Economics, p. 166.

COURSE OF INSTRUCTION

All the prescribed subjects must be finished by the end of the sophomore year. The following statement gives the years and semesters in which they occur:

FIRST YEAR

Fifteen to eighteen hours’ work per week, exclusive of military and physical training, must be chosen each semester from among the following subjects: those in italics must be in the list chosen. It is expected that five hours in natural science will be taken each semester from the options named below; but if one desires to pursue an extended course in
physics instead, he may omit science in the freshman year and take up that subject in the sophomore year.

First Semester—

History: Mediaeval and Modern European History (Hist. 1), or 19th Century (Hist. 2); 3 or 2 hours.

Language and Literature: English 1, 5 hours; French 1, or German 1, or Greek 1, or Latin 1, 5 hours; Rhetoric 1, 3 hours.

Mathematics: Advanced Algebra and Trigonometry (Math. 1, 2 or 3, 4), 5 hours.

Military: Tactics and Drill (Mil. 1, 2); 2 hours.

Natural Science: Astronomy 5, or Biology 1, or Botany 2, or Chemistry 1, or Physiography 1, or Zoology 5 or 6; 5 hours.

Physical Training—

For men—Physical Training 1, 3; 1½ hours.

For women—Physical Training 7, 9; 2 hours.

Second Semester—

History: Mediaeval and Modern European History (Hist. 1), 3 hours continued; or 19th Century History (Hist. 2), continued, and Roman History (Hist. 6), 5 hours.

Language and Literature: French 1, or German 8, or Greek 2, or Latin 1, continued as begun in the first semester; 5 hours. Rhetoric 1, continued; 3 hours.

Mathematics: Solid and Spherical Geometry; 3 hours.

Military: Drill (Mil. 2); 1 hour.

Natural Science: Astronomy 4, or Botany 1, or Chemistry 2 or 2a or 3a or 3b, or Geology 3, or Physics 2, or Physiology 4, or Zoology 1, 6 or 7; 5 hours.

Physical Training—

For men—Physical Training 1, 3; 1½ hours.

For women—Physical Training 7; 1 hour.

SECOND YEAR

Fifteen to eighteen hours' work per week, exclusive of military and physical training, must be chosen each semester. This work must include all of the prescribed subjects which were not taken in freshman year. (See p. 65, and the classification under first year.) It must also include the following:

Logic: (Phil. 1a first semester, or Phil. 1b second semester); 3 hours.

Military: Drill (Mil. 2) both semesters; 2 hours.
The remaining hours may be made up by the election of any subjects the requirements for which the student can meet.

**THIRD AND FOURTH YEARS**

The studies of these are all elective.

**LEGAL STUDY AND COLLEGE WORK**

By a proper selection of his studies it is possible for a prospective law student to take both his degree in arts and his degree in law in six years. A student who intends to do this should announce his purpose not later than the beginning of his sophomore year, and is advised to enroll in the political science group. He should first do all the work prescribed for candidates for the degree of A.B. (see p. 64, 65); he should then take studies sufficient to leave him not more than 15 hours' credit to make in the senior year of his college course. The student during this year should enroll in the College of Law and take the first year's work there. Of this work ten hours, but no more, may be counted in the College of Literature and Arts as part of the fifteen hours remaining to be taken for the arts degree. These ten hours must be in contracts (Law 1) and real property (Law 3).

_Students are not permitted to take this law work for credit toward the arts degree until their senior year; nor are they permitted to take it at all unless they are regularly matriculated candidates for the arts degree._

A fee of five dollars is charged for every law subject taken by students who do not pay the regular law school fees.

**SPECIAL COURSE PREPARATORY TO LAW**

This course is suggested as a suitable one for students who do not intend to take the degree of A.B. before entering the College of Law. Prospective law students who wish to get their arts degree first, should arrange their work as suggested in the statement about "Legal Study and College Work." If a student can spend but two years in preliminary study he should take the following course:
FIRST YEAR

1. Principles of Economics and English Economic History (Econ. 1, a and b); Mediæval and Modern European History (Hist. 1); Historical Introduction to Contemporary Politics (Hist. 2); Political Institutions (Pub. Law and Admin. 1); Jurisprudence (Pub. Law and Admin. 2); Rhetoric and Themes (Rhet. 1).

2. Five hours in economics from these courses: Money and Banking (Econ. 3); Financial History of the United States (Econ. 4); Public Finance (Econ. 5); The Transportation Problem (Econ. 8); Mediæval and Modern European History (Hist. 1); Historical Introduction to Contemporary Politics (Hist. 2); Political Institutions (Pub. Law and Admin. 1); Jurisprudence (Pub. Law and Admin. 2); Rhetoric and Themes (Rhet. 1).

SECOND YEAR

1. Five hours in economics from these courses: Financial History of the United States (Econ. 4); The Tariff Problem (Econ. 7); The Labor Problem (Econ. 12); The Monopoly Problem (Econ. 18); American History (Hist. 3); or English Constitutional History (Hist. 4); Comparative Administrative Law (Pub. Law and Admin. 5); Oral Discussions (Rhet. 5); Public Speaking (Rhet. 7).

2. Five hours in economics from these courses: Money and Banking (Econ. 3); Financial History of the United States (Econ. 4); Taxation (Econ. 6); The Transportation Problem (Econ. 8); American History (Hist. 3); or English Constitutional History (Hist. 4); International Law (Pub. Law and Admin. 4); Comparative Administrative Law (Pub. Law and Admin. 5); Oral Discussions (Rhet. 5).

If a student can spend but one year in preliminary work he should select from the above course such subjects as he is prepared for.

COURSES FOR TEACHERS

Students who wish to prepare themselves for teaching are advised to enroll in the group (pp. 65-67) in which occur the special subjects which they wish to teach. It is possible for a student so to combine the studies of the group he enters with electives in pedagogy and psychology as to give him both the necessary knowledge of his specialties and the
desirable pedagogical preparation. Students who have teaching in view should in all cases consult the Dean of the College before they make up their study lists.

As a rule, students who arrange their courses of study with reference to teaching particular subjects will have the preference in recommendations to positions calling for teachers of those subjects.

DESCRIPTION OF DEPARTMENTS

ART AND DESIGN

It is the aim of the department of art and design of the University of Illinois to offer courses that will assist students in their University studies, cultivate their esthetic taste, and equip them for future art work.

The department has kept pace with the growth of the University, has broadened its courses of study and has increased the number of its instructors so that it now offers many courses in drawing, painting, modeling, and design, making it possible for any University student, without additional expense, to secure valuable instruction in art.

All the courses of the department are also open to special students of art. These students enjoy opportunities beyond the reach of students in the usual art school, since all of the departments of the Preparatory School and of the University are open to them without additional expense.

On account of the close connection of the department of art and design with the other departments of the University, students may specialize in the artistic sides of their chosen courses of study, and students wishing to become teachers of drawing or manual training in the public schools may arrange courses to suit their individual needs.

ECONOMICS

The work in economics for undergraduates is so arranged that the student can take a continuous course for from one to three years. The courses are designed to cover as large a field as possible in the literature of the subject, and to present all disputed matters from different points of view.
Minor courses in sociology are provided for in the department.

**ENGLISH LANGUAGE AND LITERATURE**

The courses are designed to give a continuous view of the twofold subject from the earliest times to our own day. In the junior and senior years double courses are offered, so that students, having had the fundamental work of the sophomore year, may, if desired, confine themselves either to philology or to literature. The aim in the study of literature is to approach the works of an author from the philosophical, emotional, and esthetic, as well as from the merely linguistic and historical points of view.

**FRENCH**

(See Romanic Languages, p. 77.)

**GERMAN**

Four years of instruction are offered in this subject. By alternating the work in the third and fourth years, provision is made that students whose knowledge of the language at entrance enables them to begin with the third year's work, can pursue the subject throughout their course. The work of the first and second years is intended to give the student the best possible reading knowledge. In the second semester of the second year an opportunity is offered those whose special interest in the language is as a tool in scientific or technical studies, to read scientific works, but ability to translate readily and accurately is, in all cases, especially emphasized.

The work of the third and fourth years consists of a critical study of the classic poets and modern writers, and of lectures in German literature.

**GREEK**

The general purposes of the courses laid out in this subject are: first, to teach the Greek language; second, to train students to appreciate its literature; and third, to call
attention to those numerous problems in the history, thought, and institutions of the Greeks which illustrate similar phenomena noticeable among ourselves. To accomplish the first object, due attention is paid to the principles of grammar, particularly by making the syntax appear as the evidence of orderly mental procedure, and by continual practice in extemporaneous translation. The second is effected by a study of the surroundings and spirit of an author, and of those literary devices which give character to his productions. The third end is reached through familiar talks upon suitable topics as they are met.

HISTORY

In the courses offered by this department the effort is made, not merely to give students a general knowledge of historical facts, but also to give them some conception of the aims and methods of historical science, and of the materials with which it deals. To this end exercises in historical investigation, more or less elementary, will form a prominent part of the work in all the higher undergraduate courses, as well as in the seminaries.

ITALIAN

(See Romanic Languages, p. 77.)

LATIN

The courses at present offered in Latin are nine in number and extend over three years. The first year's instruction is, as far as needed, grammatical, prominence being given to Latin writing as the best method of acquiring a mastery of the language.

As soon as this preliminary work is done, the attention is directed to two ends. The first is the acquisition of power to read the language with ease and pleasure. The thought is constantly emphasized that students are not simply reading Latin—they are reading some of the great literary masterpieces of the world, and should enjoy them as such. The second aim is to introduce the student to the daily life
of the Roman; to make his home life vivid, his political life a reality. The contribution of the Roman world to the language, literature, and institutions of our time is so great that an intimate acquaintance with that life is of the highest educational value.

The courses offered include a teachers' class, the work of which is based on the needs of those teaching preparatory Latin, and methods of presentation, difficulties, aims, and results are discussed. The members of the class do the work which they, as teachers, should require of their pupils, and at intervals take charge of the recitation.

**MATHEMATICS**

The object of the instruction in pure mathematics is to promote habits of mental concentration and continuity of thought, to develop the capacity to form and combine abstract conceptions, and to cultivate deductive reasoning. The course is so arranged as to meet the requirements of those who wish to fit themselves for teaching, and of those who study the science for the love of it.

The mathematical courses open to students of the College of Literature and Arts include the entire offering of the University in mathematics.

**MILITARY SCIENCE**

The work of the department of military science is prescribed for all male students of the Colleges of Literature and Arts, Engineering, Science, and Agriculture. A full description of the work offered and of the aims and scope of the department will be found farther on in the catalog. (See p. 277.)

**PEDAGOGY**

It is the aim of the department of pedagogy to meet as fully as possible the needs of the prospective secondary school teacher, and those of the city superintendent. The normal schools of our state are well equipped for supplying
the wants of the elementary schools, and it is intended that
this work shall be supplemented, though not duplicated, here.
General courses in the history of education and the principles
of pedagogy are offered, but graduates of normal schools who
have had similar courses may be given credit for them, and
thus be enabled to devote their whole time to more specific
phases of pedagogical work. The department works in con-
junction with others of the University in directing the stu-
dent’s energies in such a way that the technical preparation to
teach a special group of high school subjects may be comb-
ined with the proper pedagogical training to enable the
teacher to apply his knowledge most advantageously. Spe-
cial problems in research and investigation are offered to
graduate students.

PHILOSOPHY

The work in this department includes history of philoso-
phy, metaphysics, ethics, and logic, and is so arranged that
the student may take a continuous course for either one or
two years.

The courses are planned to meet the needs of those who
make philosophy their specialty, and also of those who desire
an acquaintance with the subject as a means of general cul-
ture. It is the constant aim to emphasize the meaning and
interest of philosophy and the relations of its problems to
the life of man.

PHYSICAL TRAINING

The work of this department is offered to all students in
the University. Consequently the department properly be-
longs in all the colleges. A full description of its aim and
scope is given farther on. (See p. 279.)

PUBLIC LAW AND ADMINISTRATION

The courses in public law and administration are planned
with two purposes in view: (1) to give, in conjunction with
the instruction in economics and history, that informa-
tion and training which are requisite to intelligent citizen-
ship; and (2) to afford opportunities for advanced work to those who may desire more thorough preparation, either for active political life or preliminary to the study of law.

To meet these ends, the work is so arranged that the subject may be pursued continuously for three years. The elementary courses are given every year, while the advanced courses are offered in alternate years.

The courses, as a whole, are intended to cover the theory of the state, its organization, and practical operation.

**Psychology**

Besides the opportunity offered in this department for scientific training and original research, there is also given a basis for general culture. The student is taught to observe psychic phenomena in himself and in his social surroundings, both individual and collective, and is thus given a standpoint from which to approach social and ethical questions intelligently.

Historically, psychology is treated with a view to giving the student a connected idea of the development of the subject. Its experimental development and recent phases are given special attention, with particular comment upon the probable lines of its future development, and the place in human economy which it aims to fill.

**Rhetoric and Oratory**

The object of the courses in this department is to acquaint the student with the principles of rhetoric, to teach him correctness and effectiveness in the writing of English, and to give him some practice in the oral expression of his ideas. The subject matter is presented by means of text-books and lectures, though more emphasis is put upon practice than upon theory.

**Romanic Languages and Literatures**

This department offers four years of instruction in French and one year each in Spanish and Italian. In the elementary courses the main object is to give the student
correct pronunciation, grammatical knowledge, and the ability to read the languages with facility. In the second year attention is especially directed to various phases of nineteenth century literature; effort is made to ground the student thoroughly in the modern idiom, and lectures are given upon the outlines of French literature. The work of the third year is a study of the masterpieces of the seventeenth century. Ability to understand readily spoken French is requisite for admission to this course. The field of the fourth year's work is literature and society in the eighteenth century. A graduate course is offered in Old French; some of the more important texts are studied, and attention is given to the origins of the language.

**Sociology**

See economics in the philosophical group in the College of Science, p. 133, and courses 15, 16, and 18 under economics, in the "General Description of Courses," p. 205. See also, for allied courses, anthropology, p. 178, and psychology, p. 255.

**Spanish**

See Romanic Languages, p. 77.
COLLEGE OF ENGINEERING

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.

N. CLIFFORD RICKER, M.Arch., DEAN, Architecture.

THOMAS J. BURRILL, PH.D., LL.D., Bacteriology.

SAMUEL W. SHATTUCK, C.E., Mathematics.

IRA O. BAKER, C.E., Civil Engineering.

ARTHUR N. TALBOT, C.E., Municipal and Sanitary Engineering; Mechanics.

ARTHUR W. PALMER, Sc.D., Chemistry.

FRANK F. FREDERICK, Art and Design.

SAMUEL W. PARR, M.S., Applied Chemistry.

DANIEL K. DODGE, PH.D., English.

LESTER P. BRECKENRIDGE, PH.B., Mechanical Engineering.

DAVID KINLEY, PH.D., Economics.

ALBERT P. CARMAN, ScD., Physics.

GEORGE W. MYERS, PH.D., Astronomy and Applied Mathematics.

JACOB K. SHELL, M.D., Physical Training.

T. ARKLE CLARK, B.L., Rhetoric.

GEORGE D. FAIRFIELD, A.M., French, Spanish.

WILLIAM S. ALDRICH, M.E., Electrical Engineering.

DILLARD H. CLARK, CAPTAIN U. S. A., Military.

EDGAR J. TOWNSEND, PH.M., Mathematics. (On leave.)

JAMES M. WHITE, B.S., SECRETARY, Architecture.

WILLIAM ESTY, B.S., A.M., Electrical Engineering.

HARRY S. GRINDLEY, SC.D., Chemistry.

HERMAN S. PIATT, PH.D., French.

FRED A. SAGER, B.S., Physics.

CYRUS D. McLANE, B.S., Architecture, Mechanics.

79
AIMS AND SCOPE

The purpose of the College of Engineering is thoroughly to educate engineers and architects. Its aim is therefore twofold—general and technical. A considerable proportion of the course of study is devoted to general and literary work, since a graduate is now expected to arrange his ideas
in clear order and to write and speak effectively. Professional success depends upon this power far more than is commonly supposed.

There is an ever increasing fund of general and scientific knowledge with which every educated man is expected to be conversant, if he desires to retain the esteem of his associates and clients. A large and most valuable portion of this knowledge is still locked up in foreign languages, and these must be acquired by patient study and practice.

It might appear that this general training would be sufficient to demand the entire attention of the student during his whole course, but not less than one-half his time must be given to purely technical training and to the acquirement of a professional capital or stock of information and knowledge of details, together with extensive practice in the attack and solution of problems and difficulties.

METHODS OF INSTRUCTION

Whenever suitable text-books can be found, they are employed, because their use saves much time in acquiring facts and data, and because such books become doubly valuable for later reference when enriched by notes and additions. But to arouse most fully the enthusiasm of the student, discussions and formal lectures are necessary, and they must be fully illustrated by sketches, diagrams, drawings, and photographs of executed work. In all courses of study offered by this College, drawing, in its manifold forms and uses, is made a special feature, both in its applications and its modes of execution.

EQUIPMENT

The equipment of the various departments is described under appropriate heads. In addition to this, the College has a good reference library and some valuable apparatus of a general character. The most important portion consists of a collection of machines and apparatus for abbreviating computations, and especially for use in the calculation of tables. The principal instruments are here mentioned:
A Thomas ten-place arithmometer, the largest size manufactured, imported especially for the University, and giving products of numbers to twenty places. Two Thacher's computing scales for performing multiplication, division, squaring, and extraction of square root. An Amsler's polar planimeter for measuring areas of figures of any form, and employed principally in graphic statics, or in measuring indicator diagrams. A Coradi's rolling planimeter and a Coradi's polar planimeter for very accurate use. An Amsler's integrator for obtaining area, static moment, and moment of inertia of a plane figure, especially of sections of columns, beams, etc. A Coradi's pantograph of best construction for the reduction of drawings and maps. Various computing machines, including Boucher's calculator, Ram's slide rules, duplex slide rule, Webb's adders, the ribbon adder, etc. Grant's computing machines. Cox's graphical computers. A Goldmann's arithmachine.

DESCRIPTION OF DEPARTMENTS

ARCHITECTURE

The department of architecture and architectural engineering occupies nearly the entire upper story of Engineering Hall, with spacious drawing rooms lighted by skylights, convenient class rooms, library, museum, and studies.

EQUIPMENT

A large collection of casts of ornament is placed on the walls of the drawing rooms. Models of ceilings, roof trusses, stairs, joints in woodwork, and many working drawings and blue prints, with a large number of specimens of stone, terracotta, molded bricks, etc., are found in the architectural museum, together with some interesting Norwegian, Indian, and Japanese art works.

A fine collection of 20,000 engravings, photographs, and photoprints, mounted on cards eleven by fourteen inches, is placed in the drawing rooms, classified according to the Dewey decimal system, for use in construction, history of
architecture, and designing, and forms a most valuable working library for draftsmen and designers.

An electric arc lantern is permanently placed in a special lecture room with stepped floor. For use with it, there are 3,000 lantern slides illustrating the history of architecture in all countries, and especially in the United States.

The University has an excellent working library in architecture and building, and the department has also a fine special collection of books, most of which are placed for convenient use in a room adjoining the drawing rooms.

Apparatus is provided for making tests in heating and ventilation, and for making photographs and lantern slides.

The department also possesses a large collection of working drawings, from the offices of noted architects, of residences, offices, United States buildings, and especially of the more important structures of the World's Columbian Exposition.

The course in architecture makes a specialty of architectural drawing, rendering, design, and history.

COURSE OF INSTRUCTION

Required for Degree of B.S. in Architecture

First Year

1. Advanced Algebra and Trigonometry (Math. 2, 4); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng'g 1); Free-hand Drawing or Modeling (Arch. 20 or 21); French 5, or German B or 1 or 4, or English 1; Military 1, 2; Physical Training 1, 3 or 7, 9.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering, Sketching (Drawing, Gen. Eng'g 2); Free-hand Drawing or Water Color (Arch. 20 or 21); French 6, or German 2 or 6; or English 2; Military 2; Physical Training, 1, 3.

Second Year

1. Applied Mechanics (Theo. and App. Mech. 4); Wood Construction (Arch. 2); The Orders of Architecture (Arch. 8); Physics 1, 3; Monthly Problems (Arch. 9); Rhetoric 2; Military 2.

2. Strength of Materials (Theo. and App. Mech. 5); Masonry
and Metal Construction (Arch. 3); Requirements and planning of Buildings (Arch. 15); Physics 1, 3; Monthly Problems (Arch. 9); Rhetoric 2; Military 2.

Third Year

1. History of Architecture (Arch. 6); Details of Styles (Arch. 7); Architectural Seminary (Arch. 11); Sanitary Construction (Arch. 4); Architectural Designing (Arch. 17); Chemistry 1, or Economics 1a; Monthly Problems (Arch. 9).

2. History of Architecture (Arch. 6); Details of Styles (Arch. 7); Architectural Seminary (Arch. 11); Graphic Statics and Roofs (Arch. 5); Architectural Perspective (Arch. 14); Architectural Composition (Arch. 18); Monthly Problems (Arch. 9).

Fourth Year

1. Superintendence, Estimates, and Specifications (Arch. 12); Heating and Ventilation (Arch. 13); Renaissance Design (Arch. 22); Gothic Design (Arch. 23); Romanesque Design* (Arch. 24).

2. Working Drawings (Arch. 10); Residence Design (Arch. 16); Design of Ornament (Arch. 25); Surveying (Civil Eng'g 10); Thesis.

ARCHITECTURAL ENGINEERING

This course of study prepares graduates for professional employment as architects, structural designers and computers, as well as superintendents of construction. It is intended for students who prefer the structural and mathematical side of the profession to its artistic side, and who desire to pursue the full engineering course in mathematics and to acquire a thorough knowledge of the iron and steel construction now employed in buildings. It differs from the architectural course principally in the addition of a second year of mathematics and of a year of civil engineering study in bridge analysis and design, and in devoting considerably less time to architectural drawing and designing.

* A second term in Arch. 22 will be accepted in lieu of Arch. 23 or Arch. 24.
COURSE OF INSTRUCTION

Required for Degree of B.S. in Architectural Engineering

First Year

1. Advanced Algebra and Trigonometry (Math. 2, 4); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng’g 1a, 1b); Shop Practice (Mech. Eng’g 1), or Free-hand Drawing or Modeling (Arch. 20 or 21); French 5, or German B or 1 or 4, or English 1; Military 1, 2; Physical Training 1, 3 or 7.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering, Sketching (Drawing, Gen. Eng’g 2a, 2b, 2c); Shop Practice (Mech. Eng’g 1); or Free-hand Drawing (Arch. 20 or 21); French 5, or German 2 or 6, or English 2; Military 2; Physical Training 1, 3 or 7.

Second Year

1. Differential Calculus (Math. 7); Wood Construction (Arch. 2); The Orders of Architecture (Arch. 8); Physics 1, 3; Rhetoric 2; Military 2.

2. Integral Calculus (Math. 9); Masonry and Metal Construction (Arch. 3); Requirements and Planning of Buildings (Arch. 15); Physics 1, 3; Rhetoric 2; Military 2.

Third Year

1. Analytical Mechanics and Resistance of Materials (Theo. and App. Mech. 1, 2a); History of Architecture (Arch. 6); Architectural Seminary (Arch. 11); Sanitary Construction (Arch. 4); Chemistry 1.

2. Resistance of Materials, Hydraulics (Theo. and App. Mech. 2b, 3); History of Architecture (Arch. 6); Architectural Seminary (Arch. 11); Graphic Statics and Roofs (Arch. 5); Chemistry 16; Electrical Engineering (Elect. Eng’g 1).

Fourth Year

1. Superintendence, Estimates, and Specifications (Arch. 12); Heating and Ventilation (Arch. 13); Architectural Engineering (Arch. 19); Bridge Analysis and Details (Civil Eng’g 12, 13).

2. Working Drawings (Arch. 10); Residence Design (Arch. 16); Bridge Details and Design (Civil Eng’g 13, 14); Surveying (Civil Eng’g 10); Thesis.
CIVIL ENGINEERING

The design in this department is to furnish a course of theoretical instruction, accompanied and illustrated by a large amount of practice, which will enable the student to enter intelligently upon the various and important duties of the civil engineer. While the instruction aims to be practical by giving the student information and practice directly applicable in his future professional work, the prime object is the development of the mental faculties. The power to acquire information and the ability to use it are held to be of far greater value than any amount of so-called practical knowledge.

EQUIPMENT

This department has an extensive equipment of compasses, engineers' transits, solar transits, levels,—ordinary and precise,—plane tables, sextants, chronometers, barometers, etc. For the lecture room, the department is provided with full-size joints of an actual railroad bridge, sections of columns, eye-bars, etc., and a large collection of lithographs, photographs, and blueprints of bridges and buildings.

The cement laboratory occupies rooms in Engineering Hall, and is provided with slate tables, testing machines, molding machines, sieves, etc., and sample barrels of hydraulic cement, varieties of sand, and other necessary materials.

COURSE OF INSTRUCTION

Required for Degree of B.S. in Civil Engineering

First Year

1. Advanced Algebra and Trigonometry (Math. 1, 3); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng’g 1a, 1b); Shop Practice (Mech. Eng’g 1); French 5, or German B or 1 or 4, or English 1; Military 1, 2; Physical Training 1, 3.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering, Sketching (Drawing, Gen. Eng’g 2a, 2b, 2c); Shop Practice (Mech. Eng’g 1); French 5, or German 2 or 6, or English 2; Military 2; Physical Training 1, 3.
Second Year

1. Differential Calculus (Math. 7); Land Surveying and Topographical Drawing (Civil Eng’g 1, 2); Physics 1, 3; Rhetoric 2; Military 2.

2. Integral Calculus (Math. 9); Topographical Surveying, and Transit Surveying and Leveling (Civil Eng’g 2, 3); Physics 1, 3; Rhetoric 2; Military 2.

Third Year

1. Analytical Mechanics, and Resistance of Materials (Theo. and App. Mech. 1, 2a); Railroad Engineering (Civil Eng’g 4); Chemistry 1; Steam Engines (Mech. Eng’g 16).

2. Resistance of Materials and Hydraulics (Theo. and App. Mech. 2b, 3); Graphical Statics and Roofs (Arch. 5); Road Engineering (Mun. and San. Eng’g 1); Descriptive Astronomy (Astron. 4); Steam Boilers (Mech. Eng’g 17).

Fourth Year

1. Bridge Analysis, and Bridge Details (Civil Eng’g 12, 13); Masonry Construction (Civil Eng’g 5); Water Supply Engineering (Mun. and San. Eng’g 2); Practical Astronomy (Astron. 6); Thesis.

2. Bridge Details, and Bridge Design (Civil Eng’g 13, 14); Sewerage (Mun. and San. Eng’g 3); Railroad Structures (Civil Eng’g 17); Tunneling (Civil Eng’g 15); or Geodesy (Civil Eng’g 6); Economics 2 or 8; Engineering Contracts and Specifications (Civil Eng’g 16); Thesis.

ELECTRICAL ENGINEERING

INSTRUCTION

This is a course in theoretical and applied electricity. The first two years of work are substantially the same as in the other engineering courses. The last two years of work include theoretical and applied mechanics, steam engineering and electrical engineering. In each of these branches the student is thoroughly familiarized with principles and their applications in designing, experimental and constructive work.

EQUIPMENT

The lecture rooms, drafting rooms and laboratories are furnished in suitable manner and equipped with the latest
and best apparatus. In the dynamo laboratory are various sizes and types of direct and alternating current dynamos, motors and rotary converters; transformers for all classes of polyphase testing; direct and alternating current switchboards, of eight marble panels each, with every appliance for expeditious handling of electric currents. Stock, tools, and instruments of best quality are provided for each line of work. The standardizing and photometry rooms, the research and thesis rooms are equipped as may be required for special and advanced work. The workshop of this department is fitted for the several branches of electrical construction. Power is supplied from the storage battery installation of this department and from the University electric light and power plant, adjoining, in the same building, in which the direct and alternating current dynamos, driven by steam engines, also afford many facilities for experimental work.

**COURSE OF INSTRUCTION**

*Required for the Degree of B.S. in Electrical Engineering*

**First Year**

1. Advanced Algebra and Trigonometry (Math. 2, 4); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng’g 1a, 1b); French 5, or German B or 1 or 4, or English 1; Shop Practice (Mech. Eng’g 1); Military 1, 2; Physical Training 1, 3.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering, Sketching (Drawing, Gen. Eng’g 2a, 2b, 2c); French 5, or German 2 or 6, or English 2; Shop Practice (Mech. Eng’g 1); Military 2; Physical Training 1, 3.

**Second Year**

1. Differential Calculus (Math. 7); Physics 1, 3; Rhetoric 2; Elements of Machine Design (Mech. Eng’g 4); Shop Practice (Mech. Eng’g 2); Military 2.

2. Integral Calculus (Math. 9); Physics 1, 3; Rhetoric 2; Elements of Machine Design (Mech. Eng’g 4); Shop Practice (Mech. Eng’g 2); Military 2.
Third Year

1. Analytical Mechanics and Resistance of Materials (Theo. and Appl'd Mech. 1, 2a); Chemistry 1; Electrical and Magnetic Measurements (Physics 4); Electricity and Magnetism (Elect. Eng’g 3); Dynamo-Electric Machinery (Elect. Eng’g 2); Steam Engines (Mech. Eng’g 16).

Beginning with the first semester, 1899-00, the following groups of elective studies were opened to all students of Electrical Engineering who have satisfactorily completed the prescribed work of the preceding two years and a half, and for which additional work the same degree will be given.

GROUP I.—ELECTRICAL ENGINEERING

Regular Electrical Course

Third Year

2. Resistance of Materials, Hydraulics (Theo. and Appl'd Mech. 2b, 3); Steam Boilers (Mech. Eng’g 17); Dynamo-Electric Machinery (Elect. Eng’g 2); Electrical and Magnetic Measurements (Physics 4); Mechanical Engineering Laboratory (Mech. Eng’g 13); Telegraphy and Telephony (Elect. Eng’g 4); Electrical Engineering Laboratory (Elect. Eng’g 22); Electrical Design (Elect. Eng’g 31).

Fourth Year

1. Alternating Current Machinery (Elect. Eng’g 6); Alternating Currents and Alternating Current Transformer (Elect. Eng’g 5); Electrical Distribution (Elect. Eng’g 7); Electrical Design (Elect. Eng’g 32); Seminary (Elect. Eng’g 13); Electric Power Transmission (Elect. Eng’g 8); Electric Lighting (Elect. Eng’g 9); Electric Traction (Elect. Eng’g 10); Electrical Engineering Laboratory (Elect. Eng’g 23); Photometry (Elect. Eng’g 26); Elective (three semester hours); Thesis.

2. Electric Light and Power Plants (Elect. Eng’g 11); Electrical Design (Elect. Eng’g 32, 33); Seminary (Elect. Eng’g 13); Estimates, Specifications, and Superintendence (Mech. Eng’g 10); Economics 2; Advanced Electrical Measurements (Physics 9); Electro-Metallurgy (Elect. Eng’g 12); Electrical Engineering Laboratory (Elect. Eng’g 23, 24); Thesis.
GROUP II.—ELECTRICAL ENGINEERING

Electro-Physical Course

Third Year

2. Resistance of Materials, Hydraulics (Theo. and Appl'd Mech. 2b, 3); Steam Boilers (Mech. Eng'g 17); Dynamo-Electric Machinery (Elect. Eng'g 2); Electrical and Magnetic Measurements (Physics 4); Telegraphy and Telephony (Elect. Eng'g 4); Electrical Engineering Laboratory (Elect. Eng'g 22); Differential Equations (Math. 16).

Fourth Year

1. Alternating Current Machinery (Elect. Eng'g 6); Alternating Currents and Alternating Current Transformer (Elect. Eng'g 5); Electrical Distribution (Elect. Eng'g 7); Electrical Design (Elect. Eng'g 32); Seminary (Elect. Eng'g 13); Electrical Engineering Laboratory (Elect. Eng'g 23); Theory of Equations (Math. 10); Least Squares (Math. 14); Introduction to Theoretical Physics (Physics 6); Thesis.

2. Electric Light and Power Plants (Elect. Eng'g 11); Electrical Design (Elect. Eng'g 32); Seminary (Elect. Eng'g 13); Electrical Engineering Laboratory (Elect. Eng'g 23); Calculus of Variations (Math. 20); Introduction to Theoretical Physics (Physics 6); Investigations of Special Problems (Physics 7); Thesis.

GROUP III.—ELECTRICAL ENGINEERING

Electro-Chemical Course

Third Year

2. Resistance of Materials, Hydraulics (Theo. and Appl'd Mech. 2b, 3); Steam Boilers (Mech. Eng'g 17); Dynamo-Electric Machinery (Elect. Eng'g 2); Electrical and Magnetic Measurements (Physics 4); Qualitative Analysis (Chem. 3a).

Fourth Year

1. Alternating Current Machinery (Elect. Eng'g 6); Alternating Currents and Alternating Current Transformer (Elect. Eng'g 5); Electrical Distribution (Elect. Eng'g 7); Electrical Design (Elect. Eng'g 32); Seminary (Elect. Eng'g 13); Quantitative
Analysis (Chem. 5a); Introduction to Theoretical Physics (Physics 6); Thesis.

2. Electric Light and Power Plants (Elect. Eng'g 11); Electrical Design (Elect. Eng'g 32); Seminary (Elect. Eng'g 13); Electrical Engineering Laboratory (Elect. Eng'g 21); Electro-Metallurgy (Elect. Eng'g 12); Electro-Chemical Analysis (Chem. 15c, 15d); Investigation of Special Problems (Physics 7); Thesis.

MECHANICAL ENGINEERING

It is the object of this course to give the student a thorough training in the theoretical principles underlying the science of machines and mechanics, and at the same time to make him practically familiar with some of the numerous applications of these principles.

EQUIPMENT

The equipment of this department is arranged for work of three kinds—class and drawing room work, laboratory work, and shop practice.

The drawing rooms are equipped with modern desks, boards, filing cabinets, card indexes, reference books, catalogues, odontographs, gear charts, tables, etc. In the cabinet rooms are kinematic models and sectioned steam specialties, many of which were donated by the manufacturers.

The steam engineering laboratory is in the Mechanical and Electrical Engineering Laboratory. It contains nine steam engines available for testing purposes. The facilities for boiler testing are excellent. There are several types of boilers equipped with different kinds of automatic stokers. There are also various kinds of steam and power pumps and numerous steam specialties arranged for tests.

The laboratory contains three gas engines, an air compressor, a hot air engine, a large volume fan, and a complete outfit of instruments used by the mechanical engineer for testing purposes.

The pumping station and power plants of the two cities furnish additional apparatus for experimental work.

The shops of the College are in charge of this depart-
ment; they consist of a wood shop, foundry, forge shop, and machine shop.

The shops are large, well lighted and attractive; they are all equipped with modern tools and furnish abundant facilities for giving the student the necessary practice in this line of work.

One hundred and fifty students can be accommodated with the present facilities.

COURSE OF INSTRUCTION

Required for the Degree of B.S. in Mechanical Engineering

First Year

1. Advanced Algebra and Trigonometry (Math. 2, 4); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng’g 1a, 1b); French 5, or German B or 1 or 4, or English 1; Shop Practice (Mech. Eng’g 1); Military 1, 2; Physical Training, 1, 3.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering, Sketching (Drawing, Gen. Eng’g 2a, 2b, 2c); French 5, or German 2 or 6, or English 2; Shop Practice (Mech. Eng’g 1); Military 2; Physical Training 1, 3.

Second Year

1. Differential Calculus (Math. 7); Physics 1, 3; Rhetoric 2; Elements of Machine Design (Mech. Eng’g 4); Shop Practice (Mech. Eng’g 2); Military 2.

2. Integral Calculus (Math. 9); Physics 1, 3; Rhetoric 2; Elements of Machine Design (Mech. Eng’g 4); Shop Practice (Mech. Eng’g 2); Military 2.

Third Year

1. Analytical Mechanics and Resistance of Materials (Theo. and Appl’d Mech. 1, 2a); Chemistry 1; Power Measurements (Mech. Eng’g 3); Mechanism (Mech. Eng’g 5); Steam Engines (Mech. Eng’g 16).

2. Resistance of Materials, and Hydraulics (Theo. and Appl’d Mech. 2b, 3); Chemistry 16; Power Measurements (Mech. Eng’g 3); Steam Boilers (Mech. Eng’g 17); Electrical Engineering (Elect. Eng’g 1); Surveying (Civil Eng’g 10).
RAILWAY ENGINEERING

Fourth Year

1. Thermodynamics (Mech. Eng’g 7); Heat Engines (Mech. Eng’g 6); High-Speed Steam Engines and Valve Gears (Mech. Eng’g 14); Advanced Designing (Mech. Eng’g 9); Advanced Mechanical Laboratory (Mech. Eng’g 12); Seminary (Mech. Eng’g 19); Thesis.

2. Mechanics of Machinery (Mech. Eng’g 8); Graphical Statics of Mechanisms (Mech. Eng’g 18); Estimates (Mech. Eng’g 10); Advanced Designing (Mech. Eng’g 9); Advanced Mechanical Laboratory (Mech. Eng’g 12); Economics 2 or 8; Seminary (Mech. Eng’g 19); Thesis.

RAILWAY ENGINEERING

The railroad interests of the State of Illinois, as well as of the United States, have become so important as to demand a separate recognition in the courses of those educational institutions which offer instruction in engineering.

Wishing to meet the demand for specialization along this important line the University has established an undergradu- ate course leading to the degree of B.S. in Railway Engi- neering, and also provides for graduate instruction and investigation in this department leading to a second degree.

Three leading railroads of the state have promised their coöperation in the work of this department. The depart- ment of civil engineering already furnishes special instruc- tion relating to construction and maintenance of way. This new course will be devoted to the problems of motive power and machinery, including construction, design, and operation of locomotives and rolling stock. It will include also tests of fuel, water supply, materials, and supplies.

EQUIPMENT

The shops and laboratories of the departments of mechanical and electrical engineering, applied mechanics, and chemistry furnish abundant laboratory facilities along these special lines.

The department is rapidly acquiring a considerable amount of class room and laboratory material, such as photo-
graphs, blue prints, and samples of manufactured specialties of value to the students of this work.

This department now owns, with the P. & E. Div. of the C. C. C. & St. Louis Ry., a fully equipped dynamometer car, No. 609. It also owns, with the Illinois Central R. R., a fully equipped railway test car.

These cars have been designed and built for locomotive and railway tests, and they are used for no other purpose. They have been built and equipped with special reference to the following service:

1. Locomotive road tests for economy.
2. Locomotive capacity tests and measurements of train resistance.
3. Automatic track inspection for line and grade.
4. Air brake service inspection.
5. Stationary plant tests at railway shops and water stations.

The department owns a continuous steam engine indicator, apparatus for determining the effect of scale deposits on the transfer of heat through the tubes, as well as considerable apparatus designed and built for various tests of locomotives in actual service.

The new railway shops of the P. & E. Div. of the C., C., C. & St. L. Ry. at Urbana furnish exceptional opportunities for inspection of construction and repair work, and the assured aid that this department will receive from the management of these shops cannot but be of considerable value to the student.

**COURSE OF INSTRUCTION**

*Required for the Degree of B.S. in Railway Engineering*

First, Second and Third Years

Same as the course of instruction in mechanical engineering.

Fourth Year

1. Thermodynamics (Mech. Eng'g 7); Locomotive Engines (Ry. Eng'g 1); Locomotive Engine Design (Ry. Eng'g 2); Shop
Systems (Ry. Eng'g 3); Locomotive Road Tests (Ry. Eng'g 4); Seminary (Mech. Eng'g 19); Thesis.

2. Mechanics of Machinery (Mech. Eng'g 8); Compressed Air in Railway Service (Ry. Eng'g 5); Railway Estimates (Ry. Eng'g 6); Advanced Designing (Ry. Eng'g 7); Dynamometer Car Tests (Ry. Eng'g 8); Economics 2 or 8; Seminary (Mech. Eng'g 19); Thesis.

MUNICIPAL AND SANITARY ENGINEERING

This course is designed for students desiring to make a specialty of city engineering work. It prepares for the varied duties of engineer of the department of public works of cities and includes instruction in modern methods of sanitation of cities.

INSTRUCTION

Instruction is given by lectures, by text-book and semi-nary work, and by field, laboratory, and drafting work. The methods of training are intended to develop power to take up and solve new problems connected with municipal public works, as well as to design and to superintend the ordinary constructions. Surveying, structural materials, and structural design are taught as in the civil engineering course. Chemistry, botany, and bacteriology, so far as necessary to a comprehension of the questions involved in water supply and sewage disposal, are given.

COURSE OF INSTRUCTION

Required for the Degree of B.S. in Municipal and Sanitary Engineering

First Year

1. Advanced Algebra and Trigonometry (Math. 2, 4); Elements of Drafting, Descriptive Geometry (Drawing, Gen. Eng'g 1a, 1b); Shop Practice (Mech. Eng'g 1); French 5, or German B or 1 or 4, or English 1; Military 1, 2; Physical Training 1, 3.

2. Analytical Geometry (Math. 6); Descriptive Geometry, Lettering and Sketching (Drawing, Gen. Eng'g 2a, 2b, 2c); Shop Practice (Mech. Eng'g 1); French 5, or German B or 2 or 6, or English 2; Military 2; Physical Training 1, 3.
Second Year

1. Differential Calculus (Math. 7); Land Surveying and Topographical Drawing (Civil Eng’g 1, 2); Physics 1, 3); Rhetoric 2; Military 2.

2. Integral Calculus (Math. 9); Topographical Surveying, and Transit Surveying and Leveling (Civil Eng’g 2, 3); Physics 1, 3; Rhetoric 2; Military 2.

Third Year

1. Analytical Mechanics, and Resistance of Materials (Theo. and Appl’d Mechanics 1, 2a); Bacteriology (Mun. and San. Eng’g 5a); Chemistry 1; Railroad Engineering (Civil Eng’g 4a); Steam Engines (Mech. Eng’g 16).

2. Resistance of Materials, and Hydraulics (Theo. and Appl’d Mech. 2b, 3); Road Engineering (Mun. and San. Eng’g 1); Graphic Statics and Roofs (Arch. 5); Chemistry 3a; Steam Boilers (Mech. Eng’g 17); Electrical Engineering 1.

Fourth Year

1. Bridges (Civil Eng’g 12, 13); Chemistry 20; Masonry Construction (Civil Eng’g 5); Water Supply Engineering (Mun. and San. Eng’g 2); Thesis.

2. Bridge Design (Civil Eng’g 13, 14a); Engineering Contracts and Specifications (Civil Eng’g 16); Mechanical Engineering Laboratory (Mech. Eng’g 13); Sewerage (Mun. and San. Eng’g 3); Water Purification, Sewage Disposal, and General Sanitation (Mun. and San. Eng’g 6); Thesis.

PHYSICS

The courses in this department are designed to furnish the student who intends to follow the profession of engineering, science teaching, or research in physical science, with a knowledge of the phenomena and laws of physics.

EQUIPMENT

The rooms devoted to physics are in Engineering Hall. They include a large lecture room and cabinet, a large general laboratory and cabinet, several small laboratories, a constant-temperature room, a battery room, a workshop, and several private studies, laboratories, and offices.
The *lecture room* is in the form of an amphitheater, and is furnished with opera chairs provided with tablet arms. Piers at the lecture desk and in the center of the room make demonstrations with the more delicate apparatus possible. A permanent screen and rolling blinds operated by a motor facilitate illustration by lantern. The cabinet rooms adjoining the lecture room are supplied with apparatus suitable for illustration and demonstration, and are provided with conveniences for preparing apparatus for lectures.

The general laboratory is a room sixty feet square and is well lighted and ventilated. It is supplied with tables, shelves, and sinks, arranged for general experimental work. The cabinet room adjoining this laboratory contains the apparatus designed for elementary experimental work.

The *small laboratories*, six in number, are on the first floor, and are abundantly provided with masonry piers, wall shelves, sinks, dark curtains, etc. They contain a line of high-grade apparatus for advanced experimental work and research. The electrical measurement apparatus is especially complete, and there is an excellent line of apparatus from the best makers for the fundamental measurements in mechanics, heat, and light.

The *constant-temperature* room is on the first floor. It is isolated from the surrounding space by double masonry walls and double doors. It is arranged for such experiments as require a low, uniform temperature.

The department has a mechanician and well equipped workshop. This gives facilities for making apparatus from original designs for the general work of the department, and also for special investigations and research.

In addition to the preceding, there are a number of private studies and laboratories for the use of advanced students and instructors.
THEORETICAL AND APPLIED MECHANICS

The courses in theoretical and applied mechanics are designed to meet the needs of students of the College of Engineering.

EQUIPMENT

The laboratory of applied mechanics is located in the Wood Shops and Testing Laboratory. It comprises the materials laboratory and the hydraulic laboratory.

The materials laboratory has an Olsen testing machine of 200,000 pounds' capacity, arranged to test beams twenty feet long; a Riehle testing machine of 100,000 pounds' capacity; torsion testing machine of 230,000 pound-inch capacity; apparatus for testing beams; Keep's dead-load and impact machines for cast iron; a Riehle wire-testing machine; extensometers and deflectometers, a stone-grinding machine, rattlers for abrasion tests of stone and brick, with other apparatus for making all necessary measurements and observations, etc. The laboratory is fitted up as a working laboratory, where students may acquire such practice in experimental work as engineers are called upon to perform, as well as for the purpose of illustrating principles, and also for use in original investigation.

The hydraulic laboratory contains a steel standpipe connected with city water supply and having several openings, a steam pump, centrifugal pump, tanks, pits, scales, pressure gauges, hook gauges, meters, including a Venturi meter, water motor and other apparatus for experiments with orifices, tubes, weirs, pipes, hose, and nozzles. Experiments are made in connection with the regular class instruction.
COLLEGE OF SCIENCE

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
STEPHEN A. FORBES, PH.D., DEAN, ZOOLOGY.
THOMAS J. BURRILL, PH.D., LL.D., BOTANY AND HORTICULTURE.
SAMUEL W. SHATTUCK, C.E., MATHEMATICS.
CHARLES W. ROLFE, M.S., GEOLOGY.
ARTHUR W. PALMER, SC.D., CHEMISTRY.
FRANK F. FREDERICK, ART AND DESIGN.
SAMUEL W. PARR, M.S., APPLIED CHEMISTRY.
DAVID KINLEY, PH.D., ECONOMICS.
ALBERT P. CARMAN, SC.D., PHYSICS.
EVARTS B. GREENE, PH.D., HISTORY.
GEORGE T. KEMP, M.D., PH.D., HUMAN PHYSIOLOGY.
GEORGE W. MYERS, PH.D., ASTRONOMY AND MATHEMATICS.
JACOB K. SHELL, M.D., PHYSICAL TRAINING.
EDWIN G. DEXTER, B.PD., PH.D., PEDAGOGY.
EDGAR J. TOWNSEND, PH.M., MATHEMATICS. (ON LEAVE.)
T. A. CLARK, B.L., RHETORIC.
ARTHUR H. DANIELS, PH.D., PHILOSOPHY.
CHARLES W. TOOKE, A.M., PUBLIC LAW AND ADMINISTRATION.
DILLARD H. CLARK, U.S.A., MILITARY SCIENCE AND TACTICS.
VIOLET D. JAYNE, A.M., ENGLISH.
HARRY S. GRINDLEY, SC.D., CHEMISTRY.
HERMAN S. PIATT, PH.D., FRENCH.
FRED A. SAGER, B.S., PHYSICS.
FRANK SMITH, A.M., ZOOLOGY.
CHARLES A. KOFOID, PH.D., ZOOLOGY.
OSCAR QUICK, A.M., PHYSICS.
GEORGE H. MEYER, A.M., GERMAN.
AIMS AND SCOPE

The College of Science is based upon the idea that the methods of science and the branches of study to which those methods are applicable present a subject-matter and a discipline ample for the purposes of a liberal education, and that an education so derived differs materially in character and value from one whose sources are mainly literary. This College is distinguished in general from the technical col-
AIMS AND SCOPE

leges of the University by the fact that its choice of subjects is not limited by practical ends, and from the College of Literature and Arts by the predominance, in its courses and requirements, of the strictly scientific subjects. It is articulated with the latter, however, by the liberal elections from the literary courses permitted to students who have satisfied its demands as to scientific work, and by the special courses in science open to election by students from the companion college.

It affords an opportunity for the study of the natural, physical, mathematical, and mental sciences, and of economic, sociological, and philosophical subjects, either as specialties or as the substance of a general education. The candidate for graduation may take a year each in any four of the principal subjects of this College, with a considerable amount of language, literature, and general study; he may concentrate his major work on any one of the several subjects in which major courses are offered; or he may adopt any program of concentration of his major work intermediate between these extremes. The subjects presented in this College are accordingly arranged in four groups,—chemical and physical, mathematical, natural science, and philosophical,—each characterized by the predominant importance and development of the subjects indicated by its name. The studies of each group are again divided into required and elective subjects. All the required subjects are necessary to graduation in the group of studies specified; those of the elective lists are open to election, restricted only by certain general requirements, varying in the different groups, regarding the amount and distribution of the work to be done on them.

It is the purpose of this system of classification and requirement to permit large liberty of choice with respect both to main lines of study and to associated or secondary subjects, and at the same time so to guide the student's elections that his course of study shall always contain a central core or axis of closely articulated major work. Preference
is further given by this means to those minor subjects most important because of their relations to the major work elected.

The only degree given in this College is that of bachelor of science. University credit to the amount of one hundred and thirty hours (p. 171) is required for graduation. Ten of these may be earned by investigation work, the results of which are to be presented in a final thesis. Credit will be given for fractions of courses of instruction in exceptional cases only, by vote of the college faculty.

The attention of women students is especially called to the courses outlined under "household economics," p. 166. These courses count for credit for students in either the chemical or the natural science group.

**EQUIPMENT**

*Laboratories.*—The College of Science occupies three of the University buildings—the Chemical Laboratory, Natural History Hall, and the Astronomical Observatory—together with several rooms in University Hall assigned to the mathematical department and to some of the departments of the philosophical group. The physics laboratories and lecture room are in Engineering Hall, and the natural history museum is in University Hall.

The laboratory and library facilities of this College have been acquired with primary reference to the needs of the undergraduate student, and are scarcely surpassed, for their purpose, in grade and completeness, among American universities. The graduate student likewise finds here an ample equipment, material, and opportunity for independent investigation in several departments of study, notably in those covered by the operations of the State Laboratory of Natural History and of the State Entomologist's office.
THE CHEMICAL AND PHYSICAL GROUP

AIMS

The purposes of the chemical and physical group are:

1. To provide a training in the principles of chemistry and physics as part of a liberal education.

2. To furnish such instruction and training in these sciences as is requisite for the successful prosecution of studies in other sciences, i.e., biology, physiology, geology, agriculture, sanitary engineering, electrical engineering, domestic economy, etc.

3. To afford opportunity for the acquisition of the technical knowledge and skill needed in the applications of chemistry in the industrial world by the analytical chemist and expert, the manager of chemical and metallurgical industries, or the scientific and manufacturing pharmacist.

4. To meet the demands of those who are preparing themselves as teachers of chemistry and physics.

5. To lay the foundation for a career as investigator in chemistry or in physics.

Suggestions as to choice of courses.—The courses in chemistry and in physics, which are outlined on pages 107 and 110 include lists of electives which afford opportunities for extensive range in selection of options, so that it is possible to arrange numerous combination courses directed to various specific ends.

One intending to teach chemistry and physics should take all the prescribed work of the chemical course, selecting numbers 7 and 12 among his chemical electives and taking also physics 5 or 6 and mathematics 4; he can then fill out the rest of his restricted and open electives by choice of studies from the natural science group or make choice of subjects in languages and literature, etc.; or, if he wish to devote himself more fully to physics, he should take the chemical-physical course as outlined on page 110.

A course preparatory to the study of medicine may be
arranged by taking the prescribed work of the chemical course, amounting to 84 hours' credit, selecting among the chemical electives toxicology, urinalysis, and sanitary analysis, and for the other, electives taking art and design, bacteriology (botany 5), biology 1, physiology 4, psychology 2, zoology 2 and 3. The completion of this course will enable the student to obtain credits amounting to one year's work upon the four years' medical course at the College of Medicine of the University of Illinois, and will prepare him for specialization in medical and physiological chemistry.

Students of chemistry who intend to become commercial analysts should include among their chemical electives 5c, 8, 10, 6b, 15a, b, c, 18a, 24, 25, take bacteriology (botany 5 or 6), mineralogy 1a, and fill out the rest of their electives by selection of subjects from the natural science group.

EQUIPMENT FOR CHEMISTRY

Laboratories.—The Chemical Laboratory is 75 by 120 feet and three stories high, including basement. The basement contains the water survey laboratory and rooms for storage and dispensing, and for work in assaying and metallurgical chemistry. The first floor has a lecture room and laboratory for general chemistry and qualitative analysis, each of which accommodates 150 students; a large private laboratory, and a store room. The second floor has a laboratory for quantitative analysis and organic chemistry, a balance and reading room, and a large private laboratory.

Several recitation rooms used by this department and rooms for special work in physical chemistry are in University Hall.

Apparatus.—The laboratories are furnished with all of the supplies required for the various lines of work in pure and applied chemistry.

The apparatus for general use, all of which is new and of the most improved pattern and construction, includes thirty-two high grade analytical Sartorius and Troemner balances, an abundant supply of platinum ware, including combustion
tubes and a large retort for making pure hydrofluoric acid, Kahlbaum's mercurial air pumps, Schmidt and Haensch saccharimeters of three different styles, complete sets of Hofmann's and Lepsius's apparatus for lecture demonstrations, Orsat's and Hempel's apparatus for gas analysis, microscopes, spectrosopes, apparatus for electrolytic analysis, etc.; for work in physical chemistry there are thermostats, Abbe's and Pulfrich's refractometers, Krüss's universal spectral apparatus with all attachments, two calorimetric bombs, one of which is lined with platinum, Beckmann's apparatus, Dumas', Hofmann's, and Meyer's vapor density apparatus, apparatus for determination of electrical conductivities. The laboratory is provided with its own dynamo, a large storage battery, and an excellent projection lantern.

A very important feature of the equipment consists of the chemical library, which, in addition to all the modern, standard chemical texts, dictionaries, and encyclopedias, includes complete sets of nearly all the more important chemical journals, especially the German and the English. The current numbers of many others are regularly received.

EQUIPMENT FOR PHYSICS

For the equipment in physics see p. 96.

CHEMICAL COURSES

CLASSIFICATION OF SUBJECTS

Prescribed

1. *Chemical.*—General Elementary Chemistry (Chem. 1) ; 5 hours.* Descriptive Inorganic Chemistry (Chem. 2) ; 3 hours.
Inorganic Preparations (Chem. 2a) ; 3 hours.
Physical Chemistry (Chem. 7) ; 3 hours.
Organic Chemistry (Chem. 9, 9a, 14) ; 7½ hours.
Qualitative Analysis (Chem. 3a) ; 5 hours.
Quantitative Analysis (Chem. 5a) ; 5 hours.
Seminary (Chem. 19) ; 4 hours.

* For explanation of "hours" see p. 171,
2. **General.**—Advanced Algebra and Trigonometry (Math. 1, 3, or 2, 4); 5 hours.
German B or 1, 3, 4, 6; 20 hours.
Military Science, 1, 2; 5 hours.
Physical Training—
   Men, 1, 3; 2½ hours.
   Women, 7, 9; 3 hours.
Physics 1, 3; 9 hours.
Rhetoric 2; 6 hours.

  Elective

**List A**

**First Semester**—
   Assaying (Chem. 15b); 2 hours.
   Metallurgy (Chem. 6b); 3 hours.
   Metallurgical Chemistry (Chem. 15a); 2 hours.
   Sanitary Analysis (Chem. 10); 3 to 5 hours.

**Second Semester**—
   Chemical Technology (Chem. 6a); 3 hours.
   Electrolytic Analysis (Chem. 15c); 3 hours.
   Food Analysis (Chem. 5c); 2 to 10 hours.
   Household Chemistry (Chem. 23); 5 hours.
   Industrial Chemistry (Chem. 17); 3 hours.
   Iron and Steel Analysis (Chem. 8); 3 hours.
   Mineral Analysis (Chem. 5b); 3 to 10 hours.
   Theoretical Chemistry (Chem. 12); 3 hours.

**Either Semester**—
   Agricultural Chemistry (Chem. 13); 5 to 10 hours.
   Proximate Organic Analysis (Chem. 21); 3 to 10 hours.
   Physical Chemistry (Chem. 7); 3 to 10 hours.
   Special Advanced Courses (Chem. 18a, b, c); 1 to 10 hours.
   Thesis Investigation (Chem. 11); 5 to 15 hours.
   Toxicology (Chem. 24); 2 to 5 hours.
   Urinalysis (Chem. 25); 2 hours.

**List B**

   Astronomy 4, 5; 3 to 6 hours.
   Biology 1, 2; 5 or 10 hours.
   Botany 1, 2, 3, 5, 6, 8; 2 to 29 hours.
   Geology 1, 2, 3; 5 or 10 hours.
   Mineralogy 1, 2; 5 or 10 hours.
   Paleontology 1; 5 or 10 hours.
 filho 5; 3 to 10 hours.
Physiography 1; 5 hours.
Physiology 1, 2, 4, 5, 6; 1 to 20 hours.
Zoology 1, 2, 3; 5 to 15 hours.

REQUIREMENTS FOR GRADUATION.

In order to graduate in chemistry, the candidate must complete all the required courses (84 hours), and must have at least 13 hours additional for subjects chosen from the list A of chemistry electives. For the remaining 33 hours he must choose 15 hours of electives from list B and for the other 18 hours must choose subjects from any University offerings, subject to the approval of the head of the department of chemistry. He must make in all 130 hours' credit, and present an acceptable thesis.

Special exceptions as to the required number of chemical options may be made for those who desire to prepare themselves as teachers of chemistry rather than as technical chemists, and for those who in preparing for the study of medicine wish to take major work in chemistry.

COURSE OF INSTRUCTION

For the Degree of B.S. in Chemistry

First Year

1. General Elementary Chemistry (Chem. 1); German B or 1 or 4; Mathematics 1, 3 or 2, 4; Military 1, 2; Physical Training 1, 3 or 7, 9.

2. Descriptive Inorganic Chemistry (Chem. 2); German B or 3 or 6; Inorganic Preparations (Chem. 2a); Qualitative Analysis (Chem. 3a); Military 2; Physical Training 1, 3 or 7.

Second Year

1. German 4; Physics 1, 3; Quantitative Analysis (Chem. 5a); Rhetoric 2; Military 2.

2. German 6; Organic Chemistry (Chem. 9 and 9a); Physics 1, 3; Rhetoric 2; Military 2.
Third Year

1. Organic Chemistry, special chapters (Chem. 14); Rhetoric 2; Seminary (Chem. 19); Electives.
2. Physical Chemistry (Chem. 7); Rhetoric 2; Seminary (Chem. 19); Electives.

Fourth Year

1. Seminary (Chem. 19); Electives.
2. Seminary (Chem. 19); Electives.

APPLIED CHEMISTRY AND ENGINEERING

To meet the needs of those who wish to fit themselves for such work as devolves upon the managers of establish-
ments in which the operations depend upon chemical pro-
cesses, a four years' course in chemistry with related engi-
neering subjects has been arranged.

COURSE OF INSTRUCTION

Required for the Degree of B.S. in Chemistry and Engineering

First Year

1. Drawing (Gen. Eng'g 1a, 1b); General Chemistry (Chem. 1); German B or 1 or 4; Mathematics 1, 3 or 2, 4; Military 1, 2; Physical Training 1, 3 or 7, 9.
2. Analytical Geometry (Math. 6); Descriptive Inorganic Chemistry (Chem. 2); German B or 3 or 6; Inorganic Preparations (Chem. 2a); Military 2; Physical Training 1, 3 or 7.

Second Year

1. Differential Calculus (Math. 7); Physics 1, 3; Qualitative Analysis (Chem. 3a); Rhetoric 2; Shop Practice (Mech. Eng'g 1); Military 2.
2. Chemistry 5a and 6a; Integral Calculus (Math. 9); Physics 1, 3; Shop Practice (Mech. Eng'g 1); Military 2.

Third Year

1. Analytical Mechanics (Theo. and Appl'd Mech. 1 or 4); Metallurgical Chemistry and Assaying (Chem. 15a and 15b); Metallurgy (Chem. 6b); Seminary (Chem. 19); Shop Practice (Mech. Eng'g 2); Steam Engines (Mech. Eng'g 16).
2. Electrical Engineering 1; Organic Chemistry (Chem. 9); Resistance of Materials (Theo. and Appl'd Mech. 2 or 5); Seminary (Chem. 19); Steam Boilers (Mech. Eng'g 17); Shop Practice (Mech. Eng'g 2).

Fourth Year

1. Chemistry, special advanced subjects (selected from Chemistry 8, 10, 15c, 17, 18); Thermodynamics (Mech. Eng'g 7); Thesis and Investigation (Chem. 11).

2. Chemistry, special subjects (selected from Chem. 15d, 18 (a) to (d); Thesis and Investigation (Chem. 11).

PHYSICAL COURSES

CLASSIFICATION OF SUBJECTS

Prescribed

Chemistry 1, 2; 8 hours (p. 171).
French 1, 2, 5; or German B or 1, 3, 6; 20 hours.
Mathematics 2 (Advanced Algebra); 3 hours.
Mathematics 4 (Trigonometry); 2 hours.
Mathematics 6 (Analytical Geometry); 5 hours.
Mathematics 7 (Differential Calculus); 5 hours.
Mathematics 9 (Integral Calculus); 5 hours.
Military 1, 2; 5 hours.
Physical Training—
Men, 1, 3; 2½ hours.
Women, 7, 9; 3 hours.
Physics 1, 3; 9 hours.
Rhetoric 2; 6 hours.

Elective

List A (Physical)

Physics 5 and 6; 12 or 16 hours.
Physics 7; 6 or 10 hours.
Physics 8; 6 hours.
Mathematics 10 (Theory of Equations); 3 hours.
Mathematics 16 (Differential Equations); 3 hours.
Astronomy 4, 5; 5 to 10 hours.

List B (Chemical-Physical)

Physics 5 and 6; 12 or 16 hours.
Physics 7; 6 or 10 hours.
Chemistry 3a; 5 hours.
Chemistry 9, 9a; 5 hours.
Chemistry 5a; 5 hours.
Chemistry 5b; 3 or 5 hours.
Chemistry 12; 3 hours.
Chemistry 7; 5 to 15 hours.

REQUIREMENTS FOR GRADUATION

The foregoing courses have been arranged for those who wish to prepare themselves for special work in physics and allied sciences. In addition to the subjects of the prescribed list, two general lines of work are offered under elective lists A and B, one of which must be taken with the list of prescribed subjects. The advanced theoretical work of the first of these lines is largely general mechanical physics; that of the second more especially chemical. The laboratory work follows the same lines. The additional studies necessary to complete the number of hours required for graduation may be elected from the various University courses, with the approval of the head of the department of physics.

COURSE OF INSTRUCTION

Required for the Degree of B.S. in Physics

First Year

1. Advanced Algebra and Trigonometry (Math. 2, 4); German B or 1 or 4; Chemistry 1; Rhetoric 2; Military 1, 2; Physical Training 1, 3 or 7, 9.
2. Analytical Geometry (Math. 6); German B or 3 or 6; Chemistry 2, 4; Chemistry 3a, or Rhetoric 2; Military 2; Physical Training, 1, 3 or 7.

Second Year

1. Physics 1, 3; Differential Calculus (Math. 7); Rhetoric 2; German 4, or Chemistry 5a; Military 2.
2. Physics 1, 3; Integral Calculus (Math. 9); Rhetoric 2; German 6, or Chemistry 5b; Chemistry 12; Military 2.

Third Year

Physics 5, 6; Mathematics 10, 16; Astronomy 4, or Chemistry 7; Electives.
Fourth Year

Physics 7, or Physics 7, 8; Electives.

It will generally be necessary to follow the above, but other arrangements consistent with sequences of courses may be made in special cases.

DESCRIPTION OF DEPARTMENTS

CHEMISTRY

The chemical offerings include courses of instruction in general elementary, inorganic, organic, physical, and theoretical chemistry, and several lines of qualitative and quantitative analysis. (See Chemistry, in Description of Courses, p. 192.)

The first year is devoted to the consideration of general descriptive inorganic chemistry and qualitative analysis, the first half of the second year is occupied with courses in quantitative analysis, both gravimetric and volumetric, and the second half year is given to general organic chemistry. The work of these two years and that of the first half of the third year, which is devoted to more advanced organic chemistry, is prescribed for all students of the chemical courses, and is intended to impart a knowledge of the facts of chemistry, to develop skill and accuracy in manipulation, and to constitute a scientific grounding in the fundamental principles and laws of chemistry.

Aside from this prescribed work there are offered numerous electives in chemistry, which, by judicious selection, afford opportunity for specialization along any of the lines of analytical, pharmaceutical, technological, or pure chemistry.

In order that an acquaintance with chemical literature may be had; and to keep pace with the advances in chemistry, students of the third and fourth years are required to take part in the chemical seminary, in which the work consists chiefly of reviews and discussions of assigned articles in current numbers of the various journals.
One or two semesters' work in the fourth year must be devoted to the investigation of some chemical problem. This practice furnishes an opportunity to specialize along some chosen line and serves as an introduction to the methods of chemical research.

To students who are preparing to become teachers of physical science opportunity is offered for the acquirement of some experience in supervising laboratory practice in elementary chemistry. The work includes criticism and discussion of methods and application of pedagogical principles and is conducted with the coöperation of the department of pedagogy.

APPLIED CHEMISTRY

In this department there are offered ten separate courses in technological subjects. These require as preliminary work the seven general and analytical courses. They may be further supplemented by special advanced work along some chosen line. Frequent visits are made to metallurgical and other works employing chemical processes.

PHYSICS

The department of physics offers a lecture course in general descriptive physics with class room experiments, extending through the year, and accompanied by an introductory laboratory course in physical measurements. This is followed by two courses, one experimental and the other theoretical. In the experimental course the student is trained in the most exact methods of making the fundamental physical measurements and taught how to discuss his results. The theoretical course running parallel to this discusses, with the aid of elementary calculus, the theory of some of the main subjects of physics. In the senior year the student is supposed to take up some special problem for investigation and to center his laboratory work about that. An advanced mathematical course is also offered for those who wish to follow the most advanced theories and results of the science.
THE MATHEMATICAL GROUP

AIMS

The mathematical group aims to lay the mathematical foundation for special work in any one of three lines, as well as to offer an opportunity for advanced work. It is hoped that the courses offered will meet the requirements of those who need mathematics as a tool as well as of those who wish to make it a specialty.

Parallel to the pure mathematics two lines of associated work in applied mathematics are offered, namely, in physics and astronomy. Either of these may be taken by the student wishing to graduate from this group. The one leads through the physics of the sophomore year to the mathematical theory of electricity and magnetism, heat, light, and sound; the other through surveying to celestial mechanics and general and mathematical astronomy. In addition to these, a course in astronomy and physics is offered, including the mathematics through the junior year, but leading to theoretical astronomy and advanced physics in the senior year.

CLASSIFICATION OF SUBJECTS

PRESCRIBED

General Engineering Drawing 1a, 1b; 5 hours (p. 171).
Mathematics 6, 7, 9, 10, 11, 14, 16, 17, 20, 25; 31 hours.
Military Science 1, 2; 5 hours.
Physical Training—
  Men, 1, 3; 2½ hours.
  Women, 7, 9; 3 hours.
Rhetoric 2; 6 hours.

ELECTIVE

List A (Mathematics and Astronomy)
Mathematics 13, 23 or 12, 18, 24; 6 or 8 hours.
Mathematics 21, 22, or Astronomy 7, 9; 6 hours.
Mathematics 15, or Astronomy 10; 2 hours.
Mathematics 26; 2 hours.
Astronomy 4, 5, 6; 10 hours.
Physics 1, 3; 9 hours.
Civil Engineering 10; 3 hours.
French 1, 2, 5; or German B or 1, 3, 4, 6; 20 hours.

List B (Mathematics and Physics)
Mathematics 13, 23, or Mathematics 12, 18, 24; 8 or 6 hours.
Mathematics 15; 2 hours.
Mathematics 26; 2 hours.
Physics 1, 3, 5, 6; 20 hours.
French 1, 2, 5; or German B or 1, 3, 4, 6; 20 hours.

List C (Astronomy and Physics)
Astronomy 7, 9, or Mathematics 20, 21, 22; 6 hours.
Astronomy 4, 5, 6; 6 hours.
Astronomy 10; 4 hours.
Mathematics 26; 2 hours.
Physics 1, 3, 5, 6; 15 hours.
Civil Engineering 10; 3 hours.
German B or 1, 3, 4, 6; 20 hours.

List D
Anthropology 1; 3 hours.
Biology 1; 5 hours.
Botany 1, 2; 5 or 10 hours.
Chemistry 1, 3a or 3b, 4; 5 or 10 hours.
Economics 1 or 2 to 8, 11 to 17; 2 to 34 hours.
English 1, 2; 10 hours.
French 1, 5, 2; or German B or 1, 3, 4, 6; 20 hours.
Geology 1, 3; 5 to 15 hours.
History 1, 2; 2 to 10 hours.
Latin 1; 10 hours.
Library Science 12; 1 hour.
Mineralogy 1, 2; 5 or 10 hours.
Pedagogy 1 to 8; 3 to 20 hours.
Philosophy 1 to 8; 2 to 24 hours.
Physiology 4 or 1; 5 or 10 hours.
Psychology 1 to 5; 3 to 24 hours.
Public Law and Administration 1 to 7; 2 to 29 hours.
Theoretical and Applied Mechanics 1; 5 hours.
Zoology 1, 2, 7; 5 to 15 hours.

Requirements for Graduation
To graduate as a bachelor of science in the mathematical group, it is necessary for the student to complete the
list of prescribed subjects, together with those of any one of lists A, B, or C of electives, and to present an acceptable thesis. The necessary number of 130 hours may then be made up by election from lists A, B, C, and D.

COURSES OF INSTRUCTION BY YEARS AND SEMESTERS

The studies of the mathematical group may best be taken according to the following outlines of courses in mathematics and physics, in mathematics and astronomy, and in astronomy and physics, respectively.

COURSE OF INSTRUCTION

For the Degree of B.S. in Mathematics and Physics

First Year

1. Plane and Spherical Trigonometry (Math. 3); Advanced Algebra (Math. 1); Engineering Drawing 1a, 1b; French 1 or 5, or German B or 1 or 4; Military 1, 2; Physical Training 1, 3 or 7, 9; Rhetoric 2.

2. Analytical Geometry (Math. 6); French 1 or 5, or German B or 3 or 6; Military 2; Physical Training 1, 3 or 7; Rhetoric 2; Electives.

Second Year

1. Differential Calculus (Math. 7); Physics 1, 3; French 2 or German 4; Military 2.

2. Integral Calculus (Math. 9); French 2 or German 6; Military 2; Physics 1, 3.

Third Year

1. Theory of Equations (Math. 10); Theory of Determinants (Math. 11); Least Squares (Math. 14); Calculus of Variations (Math. 20); Physics 5; Electives.

2. Geometry of Space (Math. 17); Differential Equations (Math. 16); Partial Differential Equations (Math. 25); Physics 5; Electives.

Fourth Year

1. Modern Geometry (Math. 23) or Invariants (Math. 12), or Theory of Functions (Math. 13); Theory of Potential and Spherical Harmonics (Math. 21, 22); Physics 6; Mathematical Seminar and Thesis (Math. 15); Electives.
2. Higher Plane Curves (Math. 18) or Algebraic Surfaces (Math. 24) or Theory of Functions (Math. 13); Physics 6; Mathematical Seminary and Thesis (Math. 15); Electives.

COURSE OF INSTRUCTION

For the Degree of B.S. in Mathematics and Astronomy

The freshman and sophomore years are the same as in the preceding scheme except that surveying (C. E. 10) is required the first year and that astronomy 4 takes the place of physics 1, 3, of the second semester, second year.

Third Year

1. Theory of Equations (Math. 10); Theory of Determinants (Math. 11); Least Squares (Math. 14); Calculus of Variations (Ast. 11); Astronomy 5; Electives.

2. Differential Equations (Math. 16); Partial Differential Equations (Math. 25); Astronomy 6; Geometry of Space (Math. 17); Electives.

Fourth Year*

1. Theory of Functions (Math. 13); Astronomy 7; Astronomy 10 or Math. 15; Electives.

2. Theory of Functions (Math. 13); Astronomy 9; Astronomy 10 or Math. 15; Electives.

COURSE OF INSTRUCTION

For the Degree of B.S. in Astronomy and Physics

Freshman and sophomore years same as before excepting that astronomy 4 is required in the sophomore year.

Third Year

1. Astronomy 5; Least Squares (Math. 14); Theory of Equations (Math. 10); Theory of Determinants (Math. 11); Calculus of Variations (Math. 20).

2. Astronomy 6; Differential Equations (Math. 16); Partial Differential Equations (Math. 25); Geometry of Space (Math. 17); Electives.

Fourth Year*

1. Astronomy 7; Physics 5, 6; Electives.

2. Astronomy 9; Physics 5, 6; Electives.

* Astronomy 7 and 9 will be given in 1900-1901.
The instruction given in astronomy is planned to meet the needs of four distinct classes of students, viz.: (a) those who do not wish to take the time necessary to become thoroughly familiar with the facts, principles, and methods of the science, but who desire a general acquaintance with its present state and some idea of how this state has been reached; (b) engineers whose work necessitates a practical knowledge of some parts of it; (c) those students of the College of Science who wish to specialize in the geological and biological sciences, and who require a more intimate acquaintance with astronomy than can be got in one term's work; (d) those students who wish to make astronomy their specialty.

In the first courses of instruction the work of the laboratory is subordinated to that of the recitation room, but as soon as the general notions of the science become fixed in his mind, the student is required to take data and solve practical problems in the Observatory. After the student has been given sufficient practice to enable him to comprehend and appreciate the more advanced subjects of theoretical astronomy, an opportunity is provided him to familiarize himself with these subjects by the lectures and work of the senior year.

For students of class (a), course 4, presupposing mathematics through trigonometry only, is offered; for the second, courses 4 and 6, requiring the same preliminary mathematics and a term's experience in practical work with instruments, is given; for the third, courses 4, 5, and 6, extending through four terms and requiring the same mathematical preparation as course 4; and for the fourth class, all astronomical courses from 4 to 13, inclusive, are offered. Courses 7 and 9 are to be given in alternate years with 12 and 13. The courses in astronomy 7, 9, and 10, as also 12 and 13, count either as graduate or as undergradu-
ate work, but neither set can count for both. The subjects treated in the astronomical seminary will be related to those considered in courses astronomy 7 and 9, and 12 and 13 respectively.

**EQUIPMENT**

The equipment of the astronomical department consists of a students' astronomical observatory, containing the following instruments:

An equatorial telescope of 12 inches aperture, the optical parts of which are by Brashear. The instrument was built and mounted by Warner & Swasey. It is provided with graduated circles, driving clock, filar micrometer, a complete set of positive and negative eyepieces, and a dial for setting in right ascension. The construction of the telescope is such that spectroscopic, or photographic, apparatus may be attached without further work on the mechanician's part; a new 4-inch equatorial by Saegmüller with graduated circles, driving clock, and eyepieces, and an old 4-inch equatorial by Newton & Co., to be used in photometric eye estimates; a combined transit and zenith telescope by Warner & Swasey, with the usual micrometer and a number of smaller instruments, such as chronometers, a Riefler clock, a polarizing photometer, an altazimuth, two chronographs, an Eastman personal equation machine, two sextants with mercurial horizons, two small astronomical transits, one of 21 inches focal length and 1½ inches aperture, by Saegmüller, and one of 24 inches focal length and 2 inches aperture, by Newton & Co.; a Green's barometer and thermometer, a mier mark, and half a dozen masonry piers for portable instruments—for the use of students in practical astronomy. A master clock for the electrical control of secondary clocks in the various buildings on the campus is mounted in the clock room of the Observatory.

**MATHEMATICS**

The courses offered in pure mathematics are so arranged as to meet the needs (a) of those who desire such mathe-
mathematical knowledge as is necessary to carry on investigation in some line of applied mathematics, and (b) of those who wish to make mathematics a specialty. The instruction is given, for the most part, by the aid of text-books, but several of the advanced courses are given by lectures with collateral reading. To cultivate a spirit of independent investigation, all senior and graduate students who make mathematics their major, are required to take in connection with their thesis a year's work (two-hour study) in the mathematical seminary, where the results of their investigation are presented and discussed. To the seniors and graduate students two lines of work in pure mathematics are offered, and each is given in alternate years.

Courses 10 to 25 count either as graduate or undergraduate work, but in no case as both.

EQUIPMENT

The department is supplied with eighty-five of Brill's mathematical models. The collection includes an excellent set of plaster models illustrating the properties of surfaces of the second order, a set of string models for ruled surfaces, a set of paper models illustrating the real circular sections of certain conicoids, a complete set of Brill's models for the theory of functions, and a collection of surfaces of third order.

THE NATURAL SCIENCE GROUP

AIMS

The courses of the natural science group are especially intended:

1. To give a thorough liberal education with a basis in the objective sciences.
2. To prepare for the pursuit of specialties in zoology, entomology, physiology, botany, or geology as a scientific career.
3. To lay in chemical and physiological work and study a liberal foundation for a course in medicine.
4. To prepare for the teaching of the natural or physical sciences in high schools and colleges.

Special advantages are offered graduate students for whose work the museums, laboratories, and libraries, and the field and experimental equipment of the University and of the associated State Laboratory of Natural History, furnish an extraordinarily full provision. The University Biological Station, at Havana, is regarded as one of the University laboratories, and work done there by students may receive credit like work in any of the other laboratories.

CLASSIFICATION OF SUBJECTS

PRESCRIBED

Art and Design 1, 2; 3 hours (p. 171).
Chemistry 1, 3a or 3b and 4; 10 hours.
German B or 1, 3, 4, 6; 20 hours.
Mathematics 1 to 4; 5 hours.
Military Science 1, 2; 5 hours.
Physical Training—
   Men, 1, 3; 2½ hours.
   Women, 7, 9; 3 hours.
Rhetoric 2; 6 hours.

ELECTIVE*

List A (Major Courses)

Astronomy 4 to 6; 3 to 10 hours.
Biology 2; 5 hours.
Botany 1 to 5, 7, 9, 10; 10 to 44 hours.
Chemistry 2a, 5a, 5b, 5c, 7, 9, 9a or 9b, 12; 10 hours.
Geology 1, 2, 4; 5 to 20 hours.
Mineralogy 1, 2; 5 or 10 hours.
Paleontology 1; 5 or 10 hours.
Physics 1, 3; 9 hours.
Physiography 1; 5 hours.
Physiology 1, 2, 3, 5; 20 to 40 hours.
Zoology 1, 2, 3, 4, 6, 8; 5 to 45 hours.

*No number of hours in any subject will be accepted as major work other than the number specified against that subject in list A. Credit will not be given for both major and minor work in the same subject.
List B (Minor Courses)

Biology* 1; 5 hours.
Geology 3; 5 hours.
Physics 2; 5 hours.
Physiology 4; 5 hours.

The major and minor courses in lists A and B in this group are respectively the maximum offerings and the minimum requirements in the various subjects of these lists.

Requirements for Graduation

In the natural science group a student may graduate from either a specialized or a general course.

A specialized course is one containing at least two years of major work in a single subject preceding the senior year, followed by an additional year of major work in that subject, and the writing of an acceptable thesis. No student may be enrolled in a specialized course without the permission of the head of the department in which he wishes to do his principal work. Only those students who pursue a specialized course will, as a rule, be selected for fellowships, scholarships, and other similar University honors. A general course is one in which less than three years' work in any one line precedes graduation, and in which no thesis is required.

Students who specialize in geology or mineralogy may count all work done in these branches and their credits in chemistry in the list of credits required before the beginning of the senior year.

No student may graduate in natural science until he has completed all the required courses, has done at least thirty hours' work on one major elective, or forty hours' work on more than one such major (list A), and has taken at least minor courses in all the other electives in which such courses are offered (list B). The necessary number of one hundred and thirty hours for University studies may be made up by

* Not required if biology, or both zoology and botany, have been accepted for entrance.
additional elections from any courses offered in the College of Science or in the College of Literature and Arts the precedent requirements for which the student can meet.

A graduate from a four years' medical course at a school recognized by the University as of high rank may, if a matriculated student, receive for his professional medical studies credits in this group equal to one year's resident study at the University, being thus enabled to obtain his bachelor's degree in science after a three years' University course.

A student taking a three years' course of prescribed science work (see page 120), followed by three years of professional work at the University Medical College, may obtain for this joint six years' course the degrees of bachelor of science and doctor of medicine.

COURSES OF INSTRUCTION

The following list of prescribed studies and major electives shows the semesters in which the principal studies of the natural science group must be taken. The prescribed studies, which are in italics, must be taken also in the year indicated. Students intending to graduate from a specialized course should begin the study of their special subjects at the earliest time practicable.

FIRST YEAR

1. *Art and Design* 1; Advanced Algebra and Trigonometry (Math. 1, 3 or 2, 4); Biology 1; *Chemistry* 1; *Military* 1, 2; *Physical Training* 1, 3 or 7, 9.

2. Analytical Geometry (Math. 6); *Art and Design* 2; *Botany* 1, 4, 5; *Chemistry* 2, 3a, or 3b and 4; *Military* 2; *Physical Training* 1, 3 or 7; *Zoölogy* 1, 7; Physics 2.

SECOND YEAR

1. *Botany* 2, 3; *German* B or 1 or 4; *Military* 2; *Mineralogy* 1; Physics 1, 3; *Zoölogy* 2, 5, 6; Biology 1.

2. *Botany* 1, 3, 4, 5; *Geology* 1; *German* B or 3 or 6; *Military* 2; Physics 1, 3; *Zoölogy* 1, 3 (Embryology). 4, 6 (Entomology). 7; Geology 3.
THIRD YEAR

1. Botany 2, 3, 7, 8, 10; German 4; Physiology 1; Rhetoric 2; Zoölogy 2, 4, 5, 6 (Entomology).
2. Botany 3, 4, 5, 10; German 6; Mineralogy 2; Paleontology 1; Physiology 1; Rhetoric 2; Zoölogy 3 (Embryology), 4, 6 (Entomology), 7; Biology 2.

FOURTH YEAR

1. Physiology 2; French 5; Economics 1 or Philosophy 2, 4, or 6; Physiography 1; Geology 4.
2. Thesis (Bot. 9; Geol. 4; Physiol. 3; Zoöl. 8); Biology 2; Physiology 2; Mineralogy 2; Paleontology 1.

FULL COURSE PRELIMINARY TO MEDICINE

To students who wish to select studies leading to a degree in natural science as a liberal preparation for a course in medicine, the following course or its substantial equivalent is recommended. Graduates from this course will be required to take only the professional subjects at the University Medical College before taking the medical degree.

FIRST YEAR

1. Art and Design 1; Elementary Chemistry (Chem. 1); Mathematics 1, 3 or 2, 4; Biology 1; Military 1, 2; Physical Training 1, 3 or 7, 9.
2. Descriptive Inorganic Chemistry (Chem. 2); Qualitative Analysis (Chem. 3a); Geology 3; Bacteriology (Botany 5); Military 2; Physical Training 1, 3 or 7.

SECOND YEAR

1. Vertebrate Zoölogy and Comparative Anatomy (Zoölogy 2); Quantitative Analysis (Chem. 5a); German B or 1 or 4 or Latin*; Rhetoric 2.
2. Physics 1, 3; Organic Chemistry (Chem. 9, 9c); German B or 3 or 6 or Latin; Rhetoric 2.

THIRD YEAR

1. Physiology 1; German 4; Psychology 4.
2. Physiology 1; German 6; Zoölogy 3.

* Those who offer Latin for entrance must take German in this course; those who offer German for entrance should take its equivalent of Latin before going on with German in the University.
FOURTH YEAR

1. Physiology 2; French 5; Economics 1 or Philosophy 2, 4, 6.
2. Physiology 2; French 5; Economics 2 or Biology 2.

Prospective students in medicine not wishing to graduate here before taking their medical course will be assisted to make up special study lists.

COMBINED COURSE IN NATURAL SCIENCE AND MEDICINE

Students desiring so to relate their science work at the University and their professional course at the Medical College as to take both the science and the medical degrees at the end of six years, may accomplish this purpose by taking the following three years' course in the College of Science, with the professional studies of the medical course thereafter:

FIRST YEAR

1. Art and Design 1; Elementary Chemistry (Chem. 1); Mathematics 3 or 1 and 3 (Trigonometry); Biology 1; Military 1, 2; Physical Training 1, 3 or 7, 9.
2. Descriptive Inorganic Chemistry (Chem. 2); Qualitative Analysis (Chem. 3a); Physics 2; Bacteriology (Botany 5); Military 2; Physical Training 1, 3 or 7.

SECOND YEAR

1. Zoölogy 2; Quantitative Analysis (Chem. 5a); German B or 1 or 4 or Latin*; Rhetoric 2.
2. Zoölogy 3; Organic Chemistry (Chem. 9, 9c); German B or 3 or 6 or Latin; Rhetoric 2.

THIRD YEAR

1. Physiology 1; German 4; Psychology 4.
2. Physiology 1; German 6; Biology 2 or Economics 2.

SPECIAL SUGGESTED COURSES

As aids to election a number of outline courses have been arranged, covering all the requirements for graduation, and

* Those who offer Latin for entrance must take German in this course; those who offer German for entrance should take its equivalent of Latin before going on with German in the University.
making such a selection of studies within these limits as is best adapted to certain special ends. These courses are to be taken as suggestions only, made for the convenience of students. Students having definite objects in view which require a careful selection of studies are advised to consult with the Dean of the College before arranging their study lists. Outlines of specialized courses in each department may be had from the heads of departments, and complete tabulated outlines of the following described courses may be obtained from the Dean of the College.

Courses for Teachers—Four tabulated courses have been prepared for the benefit of prospective science teachers. These include a general science teacher's course, and courses for special teachers of biology, of physics and chemistry, and of geology and physiography. These courses are intended especially to prepare for the work of the science teacher in secondary schools, and with a proper course of graduate study following will also fit for instruction work in college science.

Women’s Course in Science—This is a four years’ course, arranged primarily for women students who wish a scientific education containing those subjects offered by the University which have a special bearing upon the management of the home. In addition to general courses in chemistry, botany, biology, physiology, and art and design, it contains a year’s special work in household chemistry; special semester courses in art, architecture, horticulture, physiology, and economics; a year each in history and English literature, and the courses in mathematics, German, physics, and geology necessary to graduation in the natural science group.

Economic Entomology.—A complete four years’ course has been arranged from the offerings of the natural science group for the benefit of those who wish to avail themselves to the fullest extent of the advantages offered at the University for the study of entomology, with special reference to its economic applications. It contains the substance of a liberal education in natural science and in supplementary subjects, with three years of major work in entomology, two of which
would ordinarily class as graduate work. Graduates from it will be unusually well prepared for service as experiment station entomologists or as entomological instructors in agricultural colleges and state universities.

DESCRIPTIONS OF DEPARTMENTS

BIOLOGY

Under this head two courses are offered: One of elementary work in general biology, made precedent to courses in botany and zoölogy; the other an advanced course, open only to students who have had a considerable amount of major work in zoölogy or botany or both, and intended to summarize, generalize, and extend the work of these courses on theoretical lines. Both elementary and advanced biology are taught conjointly by the departments of zoölogy and botany, the former being essentially a laboratory, and the latter a seminary course.

BOTANY

Ten courses of instruction are offered in this subject, each extending through one semester or through the year. The first two courses, each of one semester, are intended to serve a double purpose of an introduction to the work which follows for students making botany a specialty, and to afford other students an opportunity to gain the general facts of the science and to acquaint themselves with the methods of instruction. Each course as enumerated counts as major work. To a very large extent natural objects are studied rather than books, but constant endeavor is made to introduce students to pertinent existing literature. In the laboratory much use is made of the compound microscope, and special attention is given to its manipulation for best results, and to the preparation of objects. Course 8 is devoted to economic botany.

EQUIPMENT

The botanical laboratories are: One of large size with full equipment of microscopes, microtomes, aquaria, models.
charts, etc., for general work; one specially arranged and fitted up for bacteriological instruction and investigation, supplied with sterilizers, thermostats, microscopes, a full line of glassware, metal vessels, and chemicals; one adjoining the latter and used in connection with it for vegetable physiology, and having attached a glazed structure, two stories in height, well adapted to facilitate experiments upon living plants and for the growth of specimens required in the laboratories. There are also provisions for private laboratory work by instructors. The department is furnished with a lecture room; a room for the herbarium and facilities for work in connection therewith; work rooms for the preparation of specimens and material; storage rooms for apparatus, utensils, reagents, and materials; dark room for photography; rooms for offices—all in convenient association and provided with the necessary materials and apparatus for ordinary class work and for advanced research.

Special attention has been given to parasitic fungi; and the collections of specimens and of the literature upon the subject are ample for various lines of original investigation.

GEOLOGY, MINERALOGY, AND PHYSIOGRAPHY

In this department four courses are offered in geology, two in mineralogy, one in paleontology, and one in physiography.

For students who wish more than a general acquaintance with these subjects, courses aggregating forty-five hours of class room and laboratory instruction have been arranged in geology, mineralogy, and paleontology, viz., mineralogy 1, 5 hours; geology 1 and 2, 10 hours; mineralogy 2, 5 hours; physiography 1, 5 hours; paleontology 1, 10 hours; geology 4, 10 hours. (See pages 215, 241, 247, 253.)

To those who desire merely an outline of the most prominent facts and theories of geology, with some idea of the methods by which the geologist arrives at his conclusions, a course of five hours (geology 3) is offered.
EQUIPMENT

The department occupies three students' laboratories, an instructors' laboratory, a lecture room, two collection rooms, a store room, a dark room for photography, and a private office.

Apparatus.—The laboratories contain individual desks for fifty-six students. Each desk is furnished with reagent bottles, Bunsen burners, and all the other apparatus now considered necessary to a complete outfit for blowpipe work in a first-class laboratory. They are also provided with a spectroscope, specific gravity and analytical balances, chemical hoods, a muffle furnace, contact and reflecting goniometers; lithological microscopes; crystal models (575); thin sections of minerals and rocks (745); an apparatus for cutting and grinding thin sections of rocks, with a Jenney motor; apparatus for micro-chemical analysis; a self-registering barometer; an aneroid barometer and a telescopic hand level for topographic work.

For the recitation room there is a set of Kiepert's physical maps; Ramsay's orographic map of the British Isles; Haart's Alps; Chauvanne's Asia; Sydow-Habenicht's Hand Atlas; geological and soil maps of Illinois; a series of geological maps of the United States, representing land development during the successive periods; a set of charts illustrating orography, erosion, deposition of metals, etc., a set of physiographic models; a series of relief maps; 600 topographic sheets and a large contour map of the United States from the U. S. G. S.; a complete lantern outfit, with microscopic and solar attachment; seven hundred lantern slides; an equipment for photography and the manufacture of lantern slides.

Materials.—The collection of fossils comes principally from the paleozoic, but includes a representative series from the higher groups. It contains 45,000 specimens (seven hundred and forty-two of the types described in the reports of the Illinois geological survey are included) and 200 thin sections of corals and bryozoa.

The collection of minerals contains 10,900 specimens, and
that of rocks 5,500 specimens, among which is a large number of polished granites, marbles, and other ornamental building stones.

There is also a collection of Illinois soils containing 104 specimens; and a large collection of Illinois clays with their manufactured products.

PHYSIOLOGY

The special objects of the courses in physiology are as follows: (1) To give to prospective students of medicine a detailed practical knowledge of the normal histological structure and vital processes of the body, and a working familiarity with the instruments of precision used in the investigation of disease. (2) To give to students of all branches of biology a training in deducing logically necessary conclusions from data obtained by their own observations. (3) To furnish such a knowledge of physiology as will serve as a basis for future studies in hygiene.

The laboratory method of instruction is chiefly followed, supplemented, when desirable, by lectures, demonstrations, references to standard literature, and recitations. The laboratory work predominates in the major and advanced courses; the lectures, demonstrations, and recitations in the minor course.

EQUIPMENT

The department of physiology occupies four rooms in Natural History Hall; a general laboratory, a lecture room and a private laboratory on the top floor and an animal room in the basement. The general laboratory, thirty-five by fifty-six feet, is fitted at one end with desks of the most approved pattern for chemical and similar work, and at the other end with heavy tables, especially designed for use with the microscope and other apparatus requiring a stable support.

The department is equipped with a full set of apparatus for lecture demonstration and for laboratory work. Much of this apparatus has been recently imported from Europe
and is of the latest and best pattern. Much of it is adapted to the most delicate work of demonstration or research, and is not to be found in the average physiological laboratory. Among such apparatus may be mentioned a Zeiss microspectroscope for work with minute quantities of material—as blood stains in medico-legal investigations; a haemacytometer of Gowers and of Thoma-Zeiss; Fleischl’s haemometer, DuBois Reymond induction coil, latest pattern; DuBois Reymond myographion with tuning fork and Desprez signal for measuring intervals of less than one-thousandth second; ergograph; Zimmermans-Ludwig’s drum kymograph, latest pattern; Fick kymograph; sphymograph (Marey); Fleischl’s spectro-polarimeter; Knop azotometer; a Kjeldahl apparatus and a complete set of Hempel’s apparatus for gas analysis (technical).

The histological equipment includes a Bausch & Lomb microscope with nosepiece and sub-stage illumination for use of each student, and all the accessory apparatus and reagents for class work or research in histology. There is also a cabinet of histological specimens to which the students have access for study or reference, but the subject is taught with all the details of technique, and the student is required to prepare and examine his own material, and the specimens thus prepared remain his own property, and are of considerable value.

ZOOLOGY

Zoology is taught in eight undergraduate courses, three of which are entomological, and in two graduate courses, one of which is entomological. Entrance upon the work in this department is conditioned upon general elementary biology (biology 1), upon elementary entomology (zooology 5), or upon high-school zoology or biology. The courses are so organized as to lead through zoology 1 and 2 to advanced zoological work; through course 1 alone (invertebrate zoology), or through course 5 (elementary entomology) to general entomology; through course 2 alone (vertebrate zoology and comparative anatomy) to embryology and
physiology and the University preparation for medical study. One semester's work in practical entomology, intended primarily for the College of Agriculture, is offered to all University students without preliminary conditions.

EQUIPMENT

The equipment of the zoölogical department is contained in four students' laboratories, an instructor's laboratory, a lecture room, a private office, a store room, and a dark room for photography. It includes twenty aquaria, forty-eight compound microscopes of the best makes, microtomes of five patterns, and the usual equipment of incubators, paraffin baths, etc. Advanced and graduate students have the free use of the library and equipment of the State Laboratory of Natural History, which occupies rooms in Natural History Hall. They are also admitted to the privileges of the University Biological Station, at Havana, Illinois, and will be given credit for regular work done there. They are thus afforded ample opportunity for prolonged original work in several departments of zoölogical science, especially in those relating to the zoölogy of Illinois. The Bulletin of the State Laboratory is open to graduates for the publication of their papers.

Entomological students have similar access to the collections and resources of the State Entomologist's office, including a well-equipped insectary for experimental investigation.

THE PHILOSOPHICAL GROUP

AIMS

The philosophical group includes those sciences which deal both with man as an individual, in the mental and moral spheres, especially as these are connected with his physical being, and also with man in society. The branches of knowledge included in the group occupy a place among the divisions of biological science, and it is intended to carry the spirit of biology, in the commonly accepted sense, into the investigation of these subjects. The general purpose
of the group is the study of the character and development of the individual and of society, of the relations of man to external nature, of the influence of natural selection on social development, and, finally, of the possible effect of artificial selection on that development, through both subjective and objective influences.

Under this caption the subjects of psychology, pedagogy, economics, public law and administration, and philosophy are offered in the College of Science as electives to all chemical and natural science students, and to all students who desire to specialize in the philosophical subjects, with studies in the physical and natural sciences as a preparation for them. All the studies of this group are junior and senior subjects.

CLASSIFICATION OF SUBJECTS

PRESCRIBED

The same as in either the natural science or the chemical and physical group, pp. 103, 119.

ELECTIVE

List A (Major Courses)
Economics 1 or 2 to 8, 11 to 19; 2 to 44 hours (p. 171).
Pedagogy 1 to 8; 3 to 20 hours.
Philosophy 1 to 8; 3 to 24 hours.
Psychology 1 to 5; 3 to 24 hours.
Public Law and Administration 1 to 9; 6 to 31 hours.

List B (Minor Courses)
Economics 1; 5 hours.
Philosophy 2; 3 hours.
Psychology 1; 5 hours.
Public Law and Administration 1; 6 hours.

REQUIREMENTS FOR GRADUATION

In this group, as in the natural science group, a student may pursue either a specialized or a general course (p. 121).

To graduate from the College of Science in the studies of this group, in a general course, the student must either complete the subjects of the prescribed list in the chemical
group (p. 103), or must carry those of the corresponding list in the natural science group (p. 119) and earn twenty hours additional credit for major natural science studies, ten of which must be biological. He must further do forty hours' major work, or their equivalent, on subjects in the philosophical group; must take minor courses in all the philosophical subjects (except pedagogy) in which he has not completed a major course.

To graduate from this group in a specialized course the student must meet the general requirements for specialized courses, relating to thesis and amount of work required in the major subject.

Those who specialize in psychology may count all hours gained in that department, and any ten hours earned previous to the senior year in anthropology, botany, 1, 2; physiology 4; philosophy 1, 2, 6, 8; zoology 1; economics 17.

DESCRIPTION OF DEPARTMENTS

ECONOMICS

The instruction in this subject is based on the work of the first two years in science. The relation of the study to the biological sciences, commonly so called, is emphasized and kept steadily in view. In the courses in sociology the aim is to trace the evolution of society from primitive forms to its present complex structure, to examine the nature of its environment and its adaptation thereto, its present normal character and operations, and the forces, subjective and objective, which are at work tending to change its structure.

PEDAGOGY

See same in the College of Literature and Arts, p. 75.

PHILOSOPHY

The work in this department includes history of philosophy, metaphysics, ethics, and logic. The object of the courses is threefold:

1. To meet the wants of those who desire to specialize.
2. To give those who desire a more general knowledge
of these subjects some familiarity with the sphere of philosophical speculation and with the philosophical method as applied to the principles and presuppositions of the various sciences.

3. To show the relation of philosophy to practical life and the value of its study as a means of general culture.

PUBLIC LAW AND ADMINISTRATION

See same in the College of Literature and Arts, p. 76.

PSYCHOLOGY

The object of this department is twofold. The aim is, first, to acquaint the student experimentally with psychic phenomena and to make him familiar with recent literature and standard authorities; and, second, to make contributions to the science itself.

The student is from the first required to deal with the subject as an experimenter, and thus given a practical knowledge of the phenomena which he is to handle. The laboratory is well equipped with materials and apparatus for the continuation of this work through a large number of classical experiments upon sensation, which the student is required to conduct himself and of which a careful record is kept. The higher mental functions are then studied in a similar way, and the experimenter held responsible for the purity of the experimental conditions and the method of procedure. The history of psychology is also taken up. A full line of periodical literature is made accessible by the University, and this serves as the basis of reports in the seminary. In order to give a comprehensive survey of psychic activities, the genesis of mind with its accompanying development of neural structure is traced from the lower forms of life to its culmination in adult man.

For the accomplishment of the second aim of the department, that of original research, the laboratory is well equipped with suitable apparatus and every incentive is given toward a high grade of work. Investigations not immediately connected with the laboratory are also encouraged.
COLLEGE OF AGRICULTURE

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
EUGENE DAVENPORT, M.AGR., DEAN, Animal Husbandry.
THOMAS J. BURRILL, PH.D., LL.D., Botany and Horticulture.
STEPHEN A. FORBES, PH.D., Zoology.
CHARLES W. ROLFE, M.S., Geology.
DONALD MCINTOSH, V.S., Veterinary Science.
ARTHUR W. PALMER, SC.D., Chemistry.
SAMUEL W. PARR, M.S., Applied Chemistry.
DAVID KINLEY, PH.D., Economics.
ALBERT P. CARMAN, SC.D., Physics.
EVARTS B. GREENE, PH.D., History.
GEORGE T. KEMP, PH.D., M.D., Physiology.
JACOB K. SHELL, M.D., Physical Training.
PERRY G. HOLDEN, M.S., Agronomy.
HARRY S. GRINDLEY, SC.D., SECRETARY, Chemistry.
HERMAN S PIATT, PH.D., French.
FRANK SMITH, A.M., Zoology.
OSCAR QUICK, A.M., Physics.
JOSEPH C. BLAIR, Horticulture.
WILBER J. FRASER, B.S., Dairying.
WILLIAM J. KENNEDY, B.AGR., Animal Husbandry.
JOHN W. LLOYD, B.S.A., Horticulture.
GEORGE M. HOLFERTY, M.S., Botany.
HUGH E. WARD, M.S., Soil Physics.
OSCAR ERF, B.S., Dairying.
GEORGE D. HUBBARD, M.S., Geology.
ARCHIBALD D. SHAMEL, B.S., Farm Crops.
Fred R. Crane, B.S., Farm Mechanics.
Albert R. Curtiss, Woodworking.
Henry Jones, Blacksmith.

AIMS AND SCOPE

The College of Agriculture offers students an education which fits them for the business of farming and at the same time furnishes them a means of culture. This education is, therefore, partly technical and partly cultural. Its end is the training of students not only to be good farmers, but good citizens and successful men. In other words, it seeks to provide an education suitable to the needs of rural people in a democracy.

The technical portion of the course offered in the College of Agriculture constitutes about one-half of the whole work. In studying these technical subjects the aim is not so much to teach rules of practice as to make plain the principles of agricultural science. Of the remaining portion of the course, twenty hours are prescribed in the sciences. Since the technical subjects are also of a scientific character, the course as a whole is essentially scientific, rather than literary; yet the College is mindful of the educational importance of history, literature, language, and the political sciences, and reasonable attention is, therefore, given to these subjects.

METHODS OF INSTRUCTION

Of the twelve instructors in technical subjects, eleven devote their entire time to agriculture. Instruction is by laboratory work supplemented by text-books, lectures, and reference readings which are almost constantly assigned from standard volumes and periodicals. The student is brought into close practical contact with his subject. He takes levels, lays tile, tests the draft of tools, traces root systems of corn and other crops, tests germination of seeds, does budding, grafting, trimming, and spraying, and works out problems in landscape gardening. He tests milk, operates separators, makes and judges butter and cheese. He studies cuts of
meat and samples of wool, judges a great variety of animals, and has practice in diagnosing and treating their diseases.

EQUIPMENT

The College keeps on deposit from the largest manufacturers thousands of dollars worth of plows, cultivators, planters, cutters, shellers, grinders, mowers, binders, engines, etc. It has extensive collections of agricultural plants and seeds and their products. A laboratory is well equipped with apparatus for the study of soil physics and bacteriology. The grounds of the University and the fields and orchards of the Experiment Station are always available for illustration in class work. An illustrative series of colored casts of fruit and enlarged models of fruits and flowers, collections of seeds and woods, cabinets of beneficial and noxious insects with specimens of their work, photographs, maps, charts, drawings, lantern slides,—all afford valuable material for study and illustration.

Specimens of Morgan horses; Shorthorn, Jersey, and Holstein-Friesian cattle; Shropshire, Merino, and Dorset sheep, and Berkshire swine afford material for judging, which, however, is vastly increased by loans from prominent herds. In the dairy department is a complete outfit for a milk-testing laboratory and for cream separation and butter and cheese making. The department of veterinary science owns a collection illustrating materia medica, a collection of pathological specimens illustrating special abnormal bony development, and a papier maché model of a horse, capable of dissection, and showing every important detail of structure. In addition are levels, lanterns, microscopes, and cameras, an extensive list of agricultural journals, a complete file of experiment station bulletins from all the states, and an excellent assortment of standard reference books, including nearly all the pedigree registers published.
DESCRIPTION OF DEPARTMENTS

DEPARTMENT OF AGRONOMY (p. 172).

The Department of Agronomy, with four teachers, gives instruction in those subjects that relate especially to the field and its affairs, as drainage, farm machinery, field crops, the physics and bacteriology of the soil, manures, rotation and fertility, the history of agriculture, farm management and comparative agriculture. The object is to acquaint the student with the facts and principles connected with the improvement of soils, the preservation of fertility, the nature of the various crops, and the conditions governing their successful and economic production and with the development of agriculture. This object is attained by the application of the laboratory methods of study to these subjects and by free use of standard literature.

ANIMAL HUSBANDRY (p. 176).

In this department two instructors give courses covering the types of domestic animals, the separate study of sheep, swine, beef, and dairy cattle and their products, heavy and light horses with their care and training, the management of farm herds, and the principles and practices of feeding and of breeding. The object is to familiarize the student with animals, first as to their fitness for specific purposes; second, as to their care and management; third, as to their improvement by breeding, and fourth, as to the commercial production of animal products. This familiarity is gained by an exhaustive study of the uses of domestic animals; the history and character of their breeds, together with extensive practice in stock judging, supplemented by a careful study of the methods of successful stockmen and of the known principles of feeding and of organic evolution.

DAIRY HUSBANDRY (p. 203.)

Two instructors give extended courses in the study of milk and in dairy bacteriology, in the separation of cream and
the making of butter and cheese, in factory management, city milk supply and the management of dairy farms.

The object is to familiarize the student with milk and its products, together with their economic production and their proper care and delivery to the customer in an acceptable form and free from contamination. This is accomplished by a preliminary and exhaustive study of milk, as to its normal character and composition, and the accidents to which it is subject, followed by practice in the various processes in the successful manufacture of dairy products.

HORTICULTURE (p. 221).

Three instructors conduct courses in orchard management, small fruit culture and vegetable gardening; in nut culture, floriculture, landscape gardening, and forestry; in fruit propagation, greenhouse management, and the evolution of cultivated plants; and in commercial horticulture and nursery management. The purpose is to acquaint the student with the principles and practices of fruit raising and vegetable gardening, both for home and market, and with successful methods of combating insect and fungous enemies. The sense of the beautiful is cultivated and given expression in floriculture and landscape gardening to the end that more of nature's beauty shall pervade the home and its surroundings. The student studies plant life, how to propagate, cultivate, and improve the forms that have been found useful or ornamental in the way of vegetables, fruits, flowers, and trees. As in other departments, he follows the methods of the laboratory in that he learns to do by doing, supplementing everything by numerous references to standard literature.

VETERINARY SCIENCE (p. 260).

Courses are offered in veterinary anatomy and physiology, materia medica, theory and practice of veterinary medicine and surgery, and veterinary sanitary science. The object is to acquaint the student with the structure and activities of the animal in health, the characteristic symptoms of disease and the materials and methods of successful treatment. He
therefore makes careful study of the structure of domestic animals, of the nature of their derangements and the characteristic action of remedial agents, and the weekly clinic gives opportunity for practical experience in the diagnosis and treatment of the more ordinary diseases.

CLASSIFICATION OF SUBJECTS

PRESCRIBED

Agronomy I, 1a, 3, 5; 15 hours.
Animal Husbandry I, 2, 9; 10 hours.
Botany or Zoology, 10 hours.
Chemistry I, 3b, 4; 10 hours.
Dairy Husbandry I; 5 hours.
Economics 2; 2 hours.
English 1; 5 hours.
Horticulture I, 10; 8 hours.
Military I, 2; 5 hours.
Physical Training—
   Men, 1, 3; 2½ hours.
   Women, 7, 9; 3 hours.
Rhetoric 2; 6 hours.
Veterinary Science 5; 2½ hours.

ELECTIVE

List A

Agronomy 1b, 2, 2a, 3a, 4, 6, 7, 8, 9, 10; 2½ to 45½ hours.
Animal Husbandry 3, 4, 5, 6, 7, 8, 10; 2½ to 27½ hours.
Dairy Husbandry 2, 3, 4, 5, 6, 7, 8, 9; 2½ to 27½ hours.
Horticulture 2 to 9 and 11 to 19; 2 to 72 hours.
Veterinary Science 1, 2, 3, 4; 5 to 25 hours.

REQUIREMENTS FOR GRADUATION

Students will be graduated with the degree of bachelor of science in agriculture upon completing the following work:
1. The studies of the prescribed list.
2. Studies aggregating twenty semester hours, chosen from the elective list A.
3. Studies aggregating twenty-nine semester hours, chosen from any subjects offered in the University (p. 171),
which the student is prepared to take, and which are not included in the prescribed list, or list A.

4. An acceptable thesis upon an approved course of investigation, for which from five to ten semester hours will be allowed, according to the nature of the subject. Credit for this will be included in the amount to be earned by elective work.

COURSE OF INSTRUCTION

Required for the Degree of B.S. in Agriculture

First Year

1. Chemistry 1; Dairy Husbandry 1 or Horticulture 1; English 1; Military 1, 2; Physical Training 1, 3 or 7, 9; Rhetoric 2.
2. Agronomy 1, 1a or Animal Husbandry 1, 2; Agronomy 3; Chemistry 3b, 4; Military 2; Physical Training 1 and 3 or 7; Rhetoric 2; Elective.

Second Year

1. Botany or Zoology; Dairy Husbandry 1 or Horticulture 1; Military 2; Electives.
2. Botany or Zoology; Agronomy 1a or Animal Husbandry 1, 2; Military 2; Electives.

For the third and fourth years the work is largely elective, and no suggestions are offered, except that Agronomy 5 and Animal Husbandry 9 should be taken during the third year. Should the student elect five or more hours in Veterinary Science, the prescribed minor in that subject will not be exacted.
GRADUATE SCHOOL

ORGANIZATION

The Council of Administration of the University is in charge of the Graduate School, and the executive officer, to whom communications should be addressed, is the Dean of the Graduate School.

ADMISSION AND REGISTRATION

Graduates of the University of Illinois, and of other colleges and universities of approved standing, may be admitted to membership in the Graduate School upon presentation of their credentials. Other persons suitably qualified may gain admission by special vote of the Council of Administration upon such conditions as may be imposed in each case. Candidates for admission may secure application blanks from the Dean or the Registrar of the University, and these, properly filled out, should be filed, together with such documentary matter as may be presented showing qualifications for membership in the school, with the former officer. This should be done not later than the time set for registration in September. Admission may be granted at other times, but the time limit required for degrees counts from the date of the certificate of membership.

With the exceptions named below, all members of the Graduate School are required to be in regular attendance at the University, and to do all the work for which they are registered in the departments to which such work belongs. In case of absence on leave, or when absence is necessary to carry on investigations included in approved courses of study, the requirement of continuous residence may be modified by the Council of Administration.

Graduates of this University may be admitted as non-resident members of the Graduate School; and all members
of the School who have completed the residence period required for advanced degrees may register as non-residents while completing the work required for such degrees.

Members of the Graduate School register with the Dean during the registration period of each semester. This in the case of non-residents may be done by letter stating the work to be undertaken during the ensuing half-year.

STUDIES AND EXAMINATIONS

As far as can be indicated by a statement of time, full work for a graduate student consists in the use of forty-five hours a week in the lecture rooms, laboratories, etc., and in private study. Assignments of work are made upon this basis; but great variations naturally result from the subject-matter in hand, and from the abilities of individuals. Each student must select one principal line of study, called his major subject, and upon this major subject at least one-half of his work must be done; and any greater proportion of his time, up to the whole of it, may be thus devoted if proper approval is had. When work upon the selected major subject is not arranged to require all of the student's attention, he must choose one or two minor subjects, as may be necessary to complete a full course of study. Usually, at least one minor subject should be taken. Not more than two may be taken at the same time.

The major study must be approved as graduate work for this University. The minor subjects may, under approval, be chosen from the offerings to graduates, or, except in the College of Engineering, from undergraduate courses exclusive of those usually open to freshmen. But all candidates for advanced degrees must direct their selection toward some well-defined end, determined for the most part by the character and purpose of the major study.

In architectural and engineering subjects, at least the major line of study and not less than two-thirds of the entire work must be taken from lists marked "primary,"* and any

* See the courses for graduates in architecture and other engineering courses, in the "General Description of Courses," pp. 184, 202, 212, 238, 248.
remaining amount to complete a full course may be taken from those designated "secondary," under the same head with the primary list.

All courses of study leading to degrees in the Graduate School are subject to approval, first, by the head of the department of the University in which the major subject for each student belongs; second, by the Dean of the College including such department; and, third, by the Dean of the General Faculty. The signatures of the heads of departments in which chosen minor subjects belong must also be obtained before the list reaches the Dean of the General Faculty. The lists of studies, as finally approved, are deposited with the Registrar of the University. No changes may subsequently be made except under the same line of approvals, but extension of time may be arranged with the professors concerned and with the Dean of the General Faculty.

Examinations are required in all subjects, and reports upon these are made to the Registrar of the University. Graduate students in undergraduate classes are examined with these classes.

The head of the department in which the student does his major work is charged with the direction and supervision of such major work, and, in a general way, with the supervision of the student's entire course of study. He fixes the time and method of all examinations not otherwise provided for, sees that they are properly conducted, and reports results to the Registrar. It is his duty also to keep the Dean of the General Faculty informed concerning all matters affecting the interests of the student, and of the School in connection therewith.

DEGREES AND FELLOWSHIPS

A full statement regarding the degrees conferred by the University may be found on later pages of this catalogue, and in the same connection an account of fellowships. (See pp. 264 and 268.)
STATE LIBRARY SCHOOL

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
KATHARINE L. SHARP, PH.M., B.L.S., DIRECTOR, Library Economy.
MAUDE W. STRAIGHT, A.B., Reference.
MARGARET MANN, Library Economy.
GRACE O. EDWARDS, B.S., B.L.S., Cataloging.
CECILIA B. McCONNEL, Library Economy.
EMMA R. JUTTON, B.L.S., Library Economy.

AIMS AND SCOPE

The Library School, which had been conducted at Armour Institute of Technology, Chicago, since September, 1893, was transferred to the University of Illinois in September, 1897.

The scope of the work of the School has been broadened since the time of the transfer. There is now offered a four years' course of study, leading to the degree of bachelor of library science. Two years of the course are devoted to general university studies, and this is the smallest preparation which will be accepted for entrance upon the technical work. Students are encouraged to complete a four years' college course before applying for admission. This high standard is necessary because conditions in library work are rapidly changing. It is not enough to have a knowledge of books, nor is it enough to have a knowledge of methods. One or two years of training will not take the place of years of experience, but they will make the student more adaptable and general library service more intelligent.

Instruction is given in each department of library
administration. Stress is laid upon simplicity and economy, although elaborate methods are taught to enable students to work in large libraries where bibliographic exactness is required. The higher side of library work is emphasized throughout the course, and students are taught their responsibility to the schools, to the clubs, to the factories, to university extension, and to the people as organized bodies and as individuals.

It is the purpose of the University to graduate librarians who are not only trained, but educated; librarians who are not only equipped in technical details, but filled with an appreciation of their high calling to furnish "the best reading to the greatest number at the least cost."

The School offers a course of twelve lessons, open to all students of the University, on the use of the library and the ordinary reference books.

METHODS OF INSTRUCTION

There are so few text-books on library economy that instruction is given almost altogether by lecture and laboratory methods. References to books and periodicals are given for collateral reading, and individual research is encouraged from the start. Lectures are illustrated by the collections of forms and fittings and each student is expected to do a certain amount of practical work in the University library each day. Before completing the course, each student must have had actual experience in every department of the library. Class room work is tested by problems, and examinations take the form of problems wherever practicable.

LOCAL LIBRARY CO-OPERATION

The Library of the University of Illinois, the Champaign public library, and the Urbana public library have systematic plans for cooperation through the Library School, in the interests of the clubs and the schools. The club work is in successful operation. Each woman's club in the two towns
has been asked to send its program for the year to the Library School. Here a reference list is made out on each subject, specifying in which of the three libraries the material is to be found. A copy of each list is posted in each library and a copy is sent to the lady having to present the subject.

The Urbana public library has given all its field work to the Library School. The students keep up a birthday bulletin, and advertise timely subjects and holiday observances, by means of attractive posters. The seniors prepared a slip charging system for the library, which formerly used a ledger. The seniors also prepare purchase lists of new books for the library.

The Champaign public library has opened an attractive children's room and on each Saturday afternoon some member of the Library School talks to the children in this room.

EQUIPMENT

The most valuable equipment is the working library of the University.

The Library School has the complete collection of manuscript notes and problems which have been prepared since the school opened in 1893. As text-books are so few, this collection is invaluable. A collection of library reports and catalogs and of mounted samples, showing methods of administration in all departments, is carefully classified and is continually increasing. A collection of card catalogs of various forms has been made, including the book forms from Leyden, Holland; Cassel, Germany; and Florence, Italy; the Rudolph indexer and the modern forms approved by the American Library Association. Other forms are represented by photographs.

The School has a collection of printed blanks and forms illustrating methods of administration in different types of libraries, many labor-saving devices, and samples of fittings for all departments. The School received much material from the World's Columbian Exposition in 1893, and is con-
stantly receiving additions from librarians and manufacturers throughout the country.

A collection of cataloging rules and of classification systems is making for comparative study. A number of devices and patents, such as temporary binders, pamphlet cases, newspaper files, etc., have been contributed by inventors and manufacturers.

REQUIREMENTS FOR GRADUATION

Credit for 65 hours (p. 171), including the prescribed military and physical training, in addition to two years' prescribed technical library work, is required for graduation. The technical work is of junior and senior grade, and must be taken at the University, but the work of the first two years covers general university studies and may be taken at any college from which credits are accepted.

COURSE OF INSTRUCTION

Required for the degree of B.L.S.

The work of the first two years may consist of any of the courses offered in the University, the requirements for which students can meet.

THIRD YEAR

1. Elementary Library Economy (Lib. 1); Elementary Reference (Lib. 2); Selection of Books (Lib. 3); Elementary Apprentice work (Lib. 4).

2. Elementary Library Economy (Lib. 1); Elementary Reference (Lib. 2); Selection of Books (Lib. 3); Elementary Apprentice Work (Lib. 4).

FOURTH YEAR

1. Selection of Books (Lib. 3); Advanced Library Economy (Lib. 5); Bibliography (Lib. 6); History of Libraries (Lib. 7); Advanced Reference (Lib. 8); Advanced Apprentice Work (Lib. 10).

2. Selection of Books (Lib. 3); Advanced Library Economy (Lib. 5); Bibliography (Lib. 6); Advanced Reference (Lib. 8); Book-making (Lib. 9); Advanced Apprentice Work (Lib. 10); Thesis (Lib. 11).
SCHOOL OF MUSIC

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
WALTER HOWE JONES, DIRECTOR, PIANO.
RALPH WYLIE, VIOLIN.
JESSIE YOUNGE FOX, PIANO.
EMMA QUINBY FULLER, VOICE.

AIMS AND SCOPE

The School of Music offers courses leading to the degree of bachelor of music.

The courses are widely varied. Although regular courses are laid out, students may spend an indefinite amount of time in the study of an instrument or of the voice.

The course in the history of music, as well as the work in the University Orchestra and the University Choral Society, may be taken by regular students in other departments.

A course of artists' concerts is given each season under the management of the University Choral Society. In these concerts, to which an admission fee is charged, only artists of the best reputation appear.

The instructors in the School of Music give recitals and lectures on musical subjects during the year.

REQUIREMENTS FOR GRADUATION

Credit for 130 semester hours, including military and physical training credit, together with an acceptable thesis, is required for graduation with the degree of bachelor of
music. The thesis required for graduation must be on a topic related to music.

Students who are not working for a degree in music may receive a certificate of work done by complying with the following conditions:

Students of the piano, organ, or violin must complete the entire course specified for these instruments; must also complete the work offered in harmony, covering thirteen hours, and must take one year's work (ten hours) in either German or French.

Students of the voice must complete the entire course offered in vocal work, the thirteen hours' work in harmony and two years' work on the piano, besides taking one year (ten hours) of German or French, and one year (ten hours) of Italian.

Special and preparatory music students are required, in addition to their practical work in music, to pursue other lines of study sufficient to fill in their spare time.

Students enrolled in the department of music only pay no semester fees, but must pay the music fees. (See p. 283.)

CLASSIFICATION OF SUBJECTS

PRESCRIBED

Music 1; 2 hours (see p. 171).
Music 2a; 13 hours.
Music 2b; 3 hours.
Music 2c; 3 hours.
Music 2d; 3 hours.
Music 3b, 4b, 5b or 6b; 56 hours.
French or German; 10 hours.
Italian 1; 10 hours.
Mathematics 4; 2 hours.
Military 1, 2; 5 hours.
Physical Training—
  Men, 1, 3; 2½ hours.
  Women, 7, 9; 3 hours.
Physics 2; 5 hours.
Rhetoric 1; 6 hours.
The remaining hours of credit may be obtained in electives offered in the College of Literature and Arts, choice of subjects being left to individual students.

MUSICAL ORGANIZATIONS

The University Glee Club is an organization for men. Membership is decided by competition and is limited to sixteen in number. The club meets twice a week for rehearsal.

The Ladies' Glee Club is an organization for the young ladies of the University, and is in charge of the head of the vocal department.

The Mandolin and Guitar Club is open to young men who play these instruments. Membership is decided by competition, and the club is associated with the Glee Club in its concerts.

The Military Band is conducted by the director of the School of Music. It furnishes music for important University occasions and appears at battalion drill of the military department, besides giving several concerts during the year. Membership is limited to thirty in number and is decided by examination.

The University Orchestra meets for a two hours' rehearsal once a week, and is open to all students who play any orchestral instrument ordinarily well.

The University Choral Society is conducted by the head of the vocal department of the School of Music, and meets once a week for rehearsal of choral works. Membership is free to students. Singers not connected with the University are admitted on the payment of a small fee.
COLLEGE OF LAW

FACULTY

ANDREW S. DRAPER, LL.D., PRESIDENT.
JAMES B. SCOTT, A.M., J.U.D., DEAN, Constitutional and International Law, Equity, and Real Property.
CHARLES C. PICKETT, A.B., Contracts, Sales, and Carriers.
THOMAS W. HUGHES, LL.M., Evidence, Bills and Notes, Corporations.
CHARLES W. TOOKE, A.M., Domestic Relations, Damages, and Wills.

LECTURERS

HON. OLIVER A. HARKER, Judge of the Appellate Court of the State of Illinois, Lecturer on Criminal Law.
HON. BENJAMIN R. BURROUGHS, Judge of the Appellate Court of the State of Illinois, Lecturer on the Law of Real Property.
HON. FRANCIS M. WRIGHT, Judge of the Appellate Court of the State of Illinois, Lecturer on the Law of Easements.
HON. CALVIN C. STALEY, County Judge of Champaign County, Lecturer on Probate Law and Administration of Estates.
HON. ORRIN N. CARTER, County Judge of Cook County, Lecturer on Election Laws and Revenue Law of the State of Illinois.

Special courses of lectures will also be given by other gentlemen.
REQUIREMENTS FOR ADMISSION

1. All applicants for admission to the College of Law must be at least 18 years of age and of unquestioned character.

2. Graduates of colleges and of scientific schools of approved standing are admitted upon diploma or certificate without examination.

3. Graduates from any approved high school in the state are admitted in the same way.

In the absence of proper certificates the usual examination as for admission to the freshman class of the University, (p. 40) will be required.

ADVANCED STANDING

The following persons will be admitted to advanced standing:

1. Persons who produce from another law school, in good standing, certificates of having satisfactorily pursued courses in law, included in the following schedule, and received credit therein, provided that the time spent on such courses is equivalent to the time spent on the same courses in this school. Otherwise, an examination on such courses, given by the instructors in this College, must be satisfactorily passed.

2. Persons who have studied law privately or in an attorney’s office, and pass examinations prescribed by the faculty of the College.

3. Members of the bar of this state, who will be admitted to the third year class without examination as candidates for the degree of LL.B.

SPECIAL STUDENTS

Students who do not desire to be candidates for a degree may take one or more courses as special students upon approval of the faculty of the College under regulations to be prescribed for the University (p. 54). Such students will receive credit for work satisfactorily done, and may become
candidates for graduation at any time by meeting the requirements of the College.

METHODS OF INSTRUCTION

The methods of instruction used in this College are based upon the study of cases. Text-books are used to some extent, and lectures are occasionally resorted to, but the study of the case is regarded as the chief means to the attainment of legal knowledge and proficiency.

LIBRARY AND MOOT COURT

The library consists of the leading text-books on all subjects: Supreme and Appellate Court Reports of Illinois; United States Supreme Court Reports; New York, Ohio, Massachusetts, Iowa, Wisconsin, Michigan, and Indiana Reports; American Decisions, American Reports, and American State Reports; the current volumes of the West Company Reporter System, and the leading legal periodicals. Additions of reports and text-books will be made during the coming year.

The Moot Court is held once a week for the purpose of familiarizing the student with legal procedure. It is presided over by Judge Harker, the other officers being elected by the law students from their own body. All second and third year students are required to be present and to perform such duties as may be assigned them.

LEGAL STUDY AND UNIVERSITY WORK

The Council of Administration will, upon application, in proper cases, apply credits earned in the College of Law upon other University courses.

Students matriculating in the College of Law may take any of the following courses in the College of Literature and Arts, subject to the approval of the Dean of the College of Law and of the Dean of the College of Literature and Arts: public law and administration; economics and social science, and history. By special arrangement other work in the College of Literature and Arts may also be taken.
 REQUIREMENTS FOR GRADUATION

COURSE OF INSTRUCTION

Required for the Degree of LL.B.

FIRST YEAR

1. Contracts (Law 1); Torts (Law 2); Real Property (Law 3); Common Law Pleading (Law 4); Criminal Law (Law 5); Personal Property (Law 6).

2. Contracts (Law 1); Torts (Law 2); Real Property (Law 3); Common Law Pleading (Law 4); Domestic Relations (Law 7).

SECOND YEAR

1. Evidence (Law 8); Sales (Law 9); Real Property (Law 10); Agency (Law 11); Equity (Law 12); Damages (Law 13).

2. Evidence (Law 8); Real Property (Law 10); Equity (Law 12); Bailments and Carriers (Law 14); Bills and Notes (Law 15).

THIRD YEAR

1. Trusts (Law 16); Corporations (Law 17); Wills and Administration (Law 18); Partnership (Law 19); Constitutional Law (Law 22); International Law (Law 23); Practical Conveyancing (Law 25); Moot Court (Law 26).

2. Corporations (Law 17); Equity Pleading (Law 20); Suretyship and Mortgage (Law 21); Constitutional Law (Law 22); International Law (Law 23); Municipal Corporations (Law 24); Practical Conveyancing (Law 25); Moot Court (Law 26).

REQUIREMENTS FOR GRADUATION

The requirements for graduation with the degree of bachelor of laws are seventy-eight semester hours of work. A “semester hour,” as here used, means one hour per week of class room work for one-half of a year. The degree will be conferred upon the completion of the course set forth above.

ADMISSION TO THE BAR

Under the rules of the Supreme Court of Illinois, candidates for admission to the bar of this state must have had a high school education or its equivalent, must have completed a three years’ course of study in a law school or law office, and must then pass an examination to be given by the State Board of Bar Examiners.
THE COLLEGE OF MEDICINE

(For Faculty of the College of Medicine, see p. 17.)

HISTORY

The College of Medicine, the College of Physicians and Surgeons, is located on the corner of Harrison and Honore Streets, Chicago, in the heart of the medical quarter of the city. It was founded in the year 1882 by a number of representative physicians and surgeons. In 1892 the College had a thorough reorganization, and erected a commodious laboratory building—the first building exclusively for laboratory purposes erected by any medical school in the West. Since that time it has grown with steadiness and rapidity. The attendance in 1895-96 was 235; in 1896-97, 308; in 1897-98, 408; in 1898-99, 514, 35 of the students being women, and in 1899-1900 is 579, 43 being women. It became the Medical Department of the University in April, 1897.

Chicago is already the center of medical study in the United States. Since the winter of 1897-98 it has contained a larger number of medical students than any other city in the western hemisphere. These students are distributed among fourteen medical colleges, of which the College of Physicians and Surgeons is the second, as to the size of its classes, and is not outranked by any in respect to its facilities, or the scope and thoroughness of its curriculum, or in regard to the place it occupies in the esteem of the medical profession.

SESSIONS

After the first of October, 1900, the work of the College will be continuous. The collegiate year will be divided into three terms of four months each, beginning as nearly as pos-
sible the first of October, the first of February, and the first of June. Each term will be of sixteen weeks duration and will offer the same amount of work. Attendance upon two terms, that is eight months, of instruction, will constitute a year's work.

**REQUIREMENTS FOR ADMISSION, SESSION OF 1900-1901**

First, a certificate of good moral character from two reputable physicians.

Second, a diploma of an accredited high school or academy of the University of Illinois, or of a similarly accredited school of another university, whose entrance requirements are equivalent to the entrance requirements of the University of Illinois.

Or, third, entrance examination covering the following subjects:

1. **ALGEBRA.**—Fundamental operations, factoring, fractions, simple equations, involution, evolution, radicals, quadratic equations and equations reducible to the quadratic form, surds, theory of exponents, and the analysis and solution of problems involving these. The subject as given in Wells's Higher Algebra through quadratic equations, or the same work in Wentworth's Algebra or an equivalent.

2. **COMPOSITION AND RHETORIC.**—Correct spelling, capitalization, punctuation, paragraphing, idiom, and definition; the elements of Rhetoric. The candidate will be required to write two paragraphs of about one hundred and fifty words each to test his ability to use the English language. The subject as presented in Genung's Outlines of Rhetoric, Scott and Denney's English Composition, or an equivalent.

3. **ENGLISH LITERATURE.**—(a) Each candidate is expected to have read certain assigned literary masterpieces, and will be subjected to such an examination as will determine whether or not he has done so. The books assigned for the next year are as follows:

Dryden's Palamon and Arcite; Pope's Iliad, Books I., VI., XXII., and XXIV.; The Sir Roger de Coverley Papers in the Spectator; Goldsmith's The Vicar of Wakefield; De Quincey's Flight of a Tartar Tribe; Cooper's Last of the Mohicans; Lowell's Vision of Sir Launfal; Scott's Ivanhoe; Shakspere's Macbeth; Milton's
Paradise Lost, Books I. and II.; Burke's Speech on Conciliation with America; Macaulay's Essays on Milton and Addison; Tennyson's The Princess.

(b) In addition to the above, the candidate will be required to present a brief outline of American Literature. Hawthorne and Lemmon's Outline of American Literature, or an equivalent.

4. LATIN.—Such knowledge of inflections and syntax as is given in any good preparatory Latin book, together with the ability to read simple fables and stories; also four books of Caesar's Gallic War, or its equivalent in Latin of equal difficulty. The ability to write simple Latin based on the text.

5. GEOMETRY.—Plane Geometry, as given in Wells's or Wentworth's Geometry, or an equivalent.

6. HISTORY.—At least one year in one of the following subjects: (a) The History of England and of the United States; (b) General History; (c) The History of Greece and Rome.

7. PHYSICS.—The elements of physical science as presented in such text-books as Appleton's School Physics, or Avery's Elements of Natural Philosophy, or Carhart and Chute's Elements of Physics, or Gage's Elements of Physics.

The entrance examinations are conducted in writing by a committee outside of the Faculty of the College of Medicine appointed by the President of the University, and are held at the medical college at 10 a.m. on the week day next preceding the opening of each term.

ADVANCED STANDING*

Students who have received the degree of bachelor of arts or bachelor of science, and those who have completed a "medical preparatory course," equivalent to that given by the University of Illinois, and graduates of reputable schools of pharmacy, veterinary science, or dental surgery, whose course extends over two years, may enter the sophomore class and complete their studies upon three years of attendance, provided they fulfill all other requirements for admission and graduation. Students thus advanced may not complain of any conflict of hours, nor absent themselves from any part of the lower conflicting course; but they may make

* For Combined Undergraduate and Medical course of six years, leading to the degree of B.S. and M.D., see p. 123.
up deficiencies in the work of the winter session during the spring course in such branches as are represented in that course.

**COURSE OF STUDY**

The curriculum required for graduation extends over four years. During the first two years the work is confined to the sciences fundamental to practical medicine. During the freshman year this consists of work in histology, biology, embryology, chemistry, human anatomy, physiology, and materia medica. During the sophomore year the study of physiology, chemistry, and human anatomy is continued, and in addition the student takes up pathology, bacteriology, and therapeutics. With the junior year the study of the practical branches of medicine is begun. The entire subjects of practice of medicine, surgery, and obstetrics are covered in recitation courses. The student also begins clinical and bedside work and receives instruction in medical and surgical specialties. More advanced work along the same lines is continued in the senior year. Practice of medicine, surgery, and obstetrics are gone over again, this time in lecture courses and with greater minuteness of detail and profuseness of illustration. The various special departments of medicine and surgery are presented with like thoroughness, and a large part of the student's time is given to clinical study.

**METHOD OF INSTRUCTION**

During the first two years the time of the students is about equally divided between laboratory and didactic work. The plan of instruction in the College contemplates the freest use of laboratory teaching. Wherever possible practical laboratory work is made to supplement didactic teaching. Students are taught not only by prepared specimens, but they are required to prepare their own specimens from the original material, and are thus made familiar with technical methods, so that they become able independently to carry a technical investigation through all of its stages. During the junior and senior years the time is about equally divided

*For Combined Undergraduate and Medical course of six years, leading to the degree of B.S. and M.D., see p. 123.*
between clinical and didactic work, with, perhaps, a pre-
ponderance of clinical instruction in the senior year. This
clinical instruction is carried on, as far as possible, with the
student at the patient's side. Attendance upon clinics is
required in the same way as upon lectures, and the students
are graded upon, and given credit for, their work in the clini-
cal courses just as they are for the work in the didactic and
laboratory courses. The students of the junior and senior
years are divided into classes for dispensary work, and these
classes have instruction in rotation in the various depart-
ments of practical medicine.

EQUIPMENT

The college building is a six-story structure on the cor-
ner of two wide streets, with an open space around it on all
sides. It is provided with all modern conveniences. It con-
tains three well-lighted and well-ventilated amphitheaters,
the smallest of which seats two hundred students. In these
amphitheaters the usual lectures are given. Adjacent to the
college building on the west is the laboratory building. The
laboratories contained therein are among the largest and most
complete possessed by any medical college in the United
States. They occupy four floors, three of them 25 x 100 feet
each, and one 25 x 56 feet. Each will accommodate one hun-
dred and twenty students at a time. They are provided with
desks and lockers for students' use, and are well adapted to
the work for which they are severally intended. Adjoining
the laboratories are preparation rooms for the use of demon-
strators and professors. There is a bone room, to which stu-
dents have free access for the study of osteology. In the
department of pathology the collections furnish ample mate-
rial for the macroscopical as well as the microscopical study
of diseased tissues. The store rooms are connected with all
the laboratories by means of an elevator. The College has
for the use of students 150 modern microscopes of late conti-
nental and American patterns, a sufficient number of which
are equipped with oil emersion lenses. There are also an
ample number of microtomes for students' use, besides micro-
tomes of special construction for particular kinds of work, electric projection apparatus of latest design, and all other apparatus in any way necessary for students' work or for the illustration of lectures.

FREE DISPENSARY

The dispensary occupies part of the first and second floors of the main building. Connected with the reception room are fourteen clinic rooms for the accommodation of the various specialties in medicine and surgery. During the past five years there have been treated in these rooms an average of twenty thousand patients each year.

HOSPITAL FACILITIES

Members of the faculty and other friends of the College purchased, a few years ago, the adjoining building of the Post-Graduate Medical School and converted it into a hospital of 125 beds. It is a large, handsome structure, 50x100 feet, five stories high, of modern construction, and completely furnished. It is connected with the college amphitheater by a corridor and its clinical resources are thus made easily available for the instruction of students. An entire floor of this hospital is reserved as a ward for patients who are maintained by the College for the instruction exclusively of its students. It is designed to increase these hospital resources as necessity indicates. Directly opposite the College is Cook County Hospital, the only free hospital in Chicago. It contains almost a thousand patients, and supplies a quantity and variety of clinical material which no private institution can command. In the amphitheater of the hospital much of the clinical instruction of the College is given. In addition to the foregoing resources members of the faculty are connected with various other hospitals of the city and freely draw upon them for the benefit of students.

REQUIREMENTS FOR GRADUATION

First, a certificate of good moral character by two reputable physicians.
Second, satisfactory deportment during attendance at college.

Third, satisfactory evidence that the candidate is twenty-one years of age.

Fourth, proof that the candidate has attended at least four full courses of instruction in four separate years, the last of which shall have been in this institution.

Fifth, certificate that the candidate has pursued the study of practical anatomy during two years and to the extent of having dissected at least the lateral half of the human body.

Sixth, certificate that the candidate has attended two full courses of dispensary and hospital clinics.

Seventh, payment of all the college fees in full.

LIBRARY

The College has for several years had a reference library of several hundred volumes. This library owes its foundation to the gift to the College of the collection of books of the late Prof. A. Reeves Jackson. It has been added to largely from time to time by contributions from members of the faculty and other friends of the College. Its usefulness has recently been greatly augmented by gifts from the Dean of the Faculty, in consideration of which, and of provision made for its permanent maintenance and growth, it has been named by the faculty the Quine Library. It already contains practically every book of reference required by medical students, and the important medical periodicals. In point of size and completeness it is the second medical library in Chicago, the Newberry Library being the first, and in attendance of readers it is the first. It is in charge of a trained librarian, and is open daily from nine to five for the use of students.

More detailed information concerning the College may be obtained by application to the Registrar of the University, Urbana, Ill., or to the Secretary of the College of Medicine, Dr. William Allen Pusey, 103 State Street, Chicago.
THE SCHOOL OF PHARMACY

(For Faculty of School of Pharmacy, see p. 22.)

HISTORY

The Chicago College of Pharmacy is a corporation which was founded by prominent pharmacists of Chicago and vicinity in 1859 for the purpose of advancing the practice of pharmacy. One of the first steps taken was the establishment of a school of pharmacy. At that time there was no school of the kind west of the Alleghany Mountains. Members and friends contributed money, books, apparatus, and supplies; teachers were secured and a course of lectures was instituted in November, 1859.

The first class, of but two students, was graduated in 1861. The war caused a suspension of the teaching, and the school was not reopened until 1870. The great fire, in 1871, destroyed the equipment, but pharmacists throughout Europe and America extended help to the institution, furnishing an excellent library and outfit of apparatus, which became the nucleus of the present complete equipment. In 1872 the instruction was resumed for the second time and has since continued without interruption.

"The Pharmacist," a monthly journal published by the College, from 1866 until 1886, did much to advance the interests of pharmacy in the West.

In 1880 the members and graduates of the College took an active part in the formation of the Illinois Pharmaceutical Association, which, in the following year, secured the passage of the pharmacy law.

The twenty-fifth anniversary of the founding of the College was signalized by the completion and occupation of a
building in which ample space for many years’ growth was provided. The better accommodations gave an impulse to better work. Up to this time instruction had been given mainly by means of lectures, laboratory work being entirely optional. Laboratory courses in pharmacy, chemistry, and vegetable histology were now made obligatory. A laboratory devoted entirely to prescription compounding was established in 1892. The excellence of the equipment in this department won for the College a medal and diploma at the World’s Columbian Exposition.

The College was formally united with the University May 1, 1896, and is now conducted as the technical “School of Pharmacy of the University of Illinois.” In the management of the School the Trustees and officers of the University have the assistance of an advisory board of pharmacists elected by the registered pharmacists of the state through the Illinois Pharmaceutical Association.

The School is situated near the business center of Chicago. In addition to the larger amphitheater, known as “Attfield Hall,” which has a seating capacity of three hundred and fifty, the building occupied has a smaller hall especially fitted for lectures and demonstrations in chemistry, and capable of seating one hundred and fifty persons. The chemical and pharmaceutical laboratories, as well as the microscopic laboratory and the dispensing laboratory, are commodious and well appointed.

The courses of instruction, covering two terms of seven months each, extending from October to April, inclusive, afford opportunities for a thorough technical training, such as is necessary for the successful practice of pharmacy. The subjects taught are pharmacy, chemistry, botany, and materia medica.

The system of teaching includes lectures, demonstrations, recitations, written and oral examinations, as well as individual instruction in actual work in operative and dispensing pharmacy, analytical chemistry, use of the compound microscope, etc. Much time is devoted to laboratory practice.
REQUIREMENTS FOR ADMISSION

Applicants for admission must be at least sixteen years of age and must furnish evidence of their ability to prosecute the work of the course successfully.

The preliminary education should be equivalent to that required for entrance to a good high school.

Students who have pursued courses of study in other colleges of pharmacy will be given credit for such portions of their work as are equivalent to the work required by this School.

REQUIREMENTS FOR GRADUATION

The candidate for the degree of graduate in pharmacy must be twenty-one years of age, must have had four years' practical experience in pharmacy, including the period of attendance at School, and must have attended two full courses of instruction, the first of which may have been in some other reputable college or school of pharmacy. He must have attended regularly the laboratory and lecture courses of this School, must pass the examinations, and must not have been absent more than five times during the term from either laboratory exercises or lectures in any department.

The candidate for the degree of graduate in pharmacy, who presents himself for final examination before he has attained the age or practical experience required, will, if successful, receive a certificate of having finished the course and will be awarded his diploma when the requirements of age and experience are complied with.

Persons competent to fulfill the general requirements of admission to the University may be granted credit upon the University courses for equivalent work satisfactorily completed at the School of Pharmacy.

Further information is given in the special announcement of this school. Address W. B. Day, Actuary, School of Pharmacy, 465-7 State Street, Chicago, Ill.
HOUSEHOLD ECONOMICS

The University offers a group of courses selected from various departments to form a complete scientific basis for planning, decorating, and managing a home.

The courses are as follows:

ARCHITECTURE

A special course is offered to students in household economics in house-planning and house decoration. See Architecture 27.

BACTERIOLOGY (BOTANY 5)

This course extends through the second semester, ten hours a week. Eight to ten weeks are devoted to a general introduction to the science and the methods of laboratory work, the nature and characteristics of bacteria, their kinds and special effects, the preparation of nutrient media, securing and continuing pure cultures, microscopical preparations, etc. After this each student may select a subject or line of subjects for special study and investigation. These may be of direct interest and importance to the housekeeper, and include, besides general sanitary matters, such topics as fermentation and putrefactive changes in foods and food substances; beneficial and injurious organisms and their effect in bread-making, in milk products, etc.; bacteriological examination of water and of air; the preservation of organic substances; cleansing and fumigating clothing, rooms, apparatus, etc.; and the distribution and elimination of disease germs.

Required: Chemistry i and Biology i.

CHEMISTRY

Two years of chemistry are offered for students of household economics.
Subjects of the first year are: General elementary chemistry. (Chem. 1.) Qualitative analysis. (Chem. 3b.) Elements of organic chemistry. (Chem. 4.)

For the second year several different courses are available. These should be grouped substantially as follows:

Either (1): Quantitative analysis (Chem. 5a), and chemistry of foodstuffs (Chem. 5c). This includes analysis and testing of milk, butter, cereals, meats, etc.

Or, (2): Agricultural chemistry (Chem. 13).

Or, (3): Household chemistry (Chem. 23). This course includes analyses of baking powders, vinegars, syrups, sugars, soaps, etc., etc.

Sanitary analysis of water, air, etc. (Chem. 10) and proximate organic analysis (Chem. 21) afford opportunities for investigation of food supplies in both the raw and prepared state.

ECONOMICS

A series of six or eight lectures will be given, if desired, on certain questions of social economics which have a direct bearing on household economy. These lectures will discuss such topics as the domestic servant problem in its relation to the general labor question; household budgets, and the light they throw on the economics of consumption; the wages of women workers, etc.

PHYSIOLOGY

Work in this course consists of microscopical and chemical study of food and digestion.

Required: Chemistry 1 and Biology 1.
SUMMER TERM

In the summer of 1899 the University held a Summer Term opening on the Monday following commencement and continuing nine weeks. The attendance was 97 men and 51 women, a total of 148. Of these 106 had not attended the University before. Of the 42 old students, 10 were graduates of the University. Fifty counties of Illinois, and seven other states, were represented.

The subjects offered and the students taking the same were as follows: Botany, 51; Chemistry, 15; Physics, 43; Zoölogy, 51; English-American Literature, 24; Rhetoric, 31; Shakspere, 25; Latin, beginners, 29, Cæsar 14, Cicero 6, Virgil 6; Pedagogy, 72; Mathematics, 55.

SUMMER TERM, 1900

The Summer Term of 1900 will open Monday, June 18th, continue six weeks, and close Friday, July 27th. No examinations or other conditions will be placed upon admission. All who can do the work are welcome to get what they can from it. Those who can meet the requirements may matriculate in the University if they desire, and in that event may have credits to apply upon regular University courses when certified, upon examination or otherwise, by the professors in charge. Time may be doubled or even tripled upon any work in which the student is especially interested, by arranging with the professor in charge, and work so multiplied will be equitably credited to matriculants in the University records. The fees will be $10 for the term; if a matriculant in the University, $6. Laboratory fees will be charged to cover the cost of material used.
SUMMER TERM

COURSES OF WORK

Biology (zoology and botany), in charge of Deans Bur- 
rill and Forbes, Professor Smith, Mr. Holferty, and Mr. 
McClellan.

Chemistry, in charge of Assistant Professor Grindley.

Physics, in charge of Assistant Professor Sager and Mr. 
Carpenter.

Pedagogy and psychology, in charge of Professor Dexter 
and Assistant Professor Brooks.

English language and literature, in charge of Professor 
Clark and Miss Carson.

Latin, in charge of Professor Barton.

Mathematics and astronomy, in charge of Professor 
Myers and Mr. Brenke.

Lectures will be presented by the State Superintendent of 
Public Instruction, and by the Presidents of three of the 
state normal schools, and by the President and many pro-
fessors of the University.

The libraries, laboratories, Astronomical Observatory, and 
gymnasiums of the University will be open to students at the 
summer term.

For information circular address the Registrar.

SATURDAY CLASSES FOR TEACHERS

In the fall of 1899 classes were formed to meet on Satur-
day mornings for such teachers as chose to enroll themselves 
for work. A class was formed for the study of subjects for 
which there were five, or more, applicants. The subjects 
which were called for during the present year are algebra, 
art and design, English literature, German, and Latin. Each 
person is charged a fee of $5, and no one is permitted to take 
more than one subject except on the payment of an extra 
fee. In no case may a student carry more than two subjects. 
It is hoped that the demand for this work will increase.
GENERAL DESCRIPTION OF COURSES

Following the description of each course of instruction will be found the necessary requirements, if any, for admission to that particular course. Careful attention must be given to these requirements and to the sequence of studies thus indicated. For instance, under Architecture 4, for students of the College of Engineering, page 179, there are required "Physics 1 and 3," and "Architecture 2 and 3." Turning now to these subjects, it is found that physics 1 and 3 are the major course of one year, architecture 2 is wood construction, and architecture 3 is metal construction. All these subjects must be satisfactorily passed before admission may be had to the class in architecture 4.

In case a course not required for graduation is selected by less than five students, the right to withdraw the same for the semester is reserved.

Graduate courses of instruction are described under the various subjects, as a rule after the undergraduate courses. They are numbered upward from 100. Other courses may often be arranged by the professors in charge to meet the special requirements of students. The subjects in which graduate courses are announced for 1900-1901 are as follows:

Agriculture, architecture, botany, chemistry, civil engineering, Danish language, economics, electrical engineering, French, geology, Greek, history, mechanical engineering, municipal and sanitary engineering, pedagogy, philosophy, psychology, theoretical and applied mechanics, zoology.

Credit is reckoned in semester "hours," or simply "hours." An "hour" is either one class period a week for one semester, each class period presupposing two hours' preparation by the student, or the equivalent in laboratory, shop, or drawing room.
The semester, the days, and the class period or periods during which each course is given, and the number of "hours" per semester for which the course counts, are shown after each course, as follows: The semester is indicated by the Roman numerals I, II; the days, by the initial letters of the days of the week; the class period or periods (of which there are nine each day, numbered consecutively from one to nine), by Arabic figures; and the "hours" or amount of credit, by Arabic figures in parentheses. For example, after the description of Anthropology I (p. 178) occur the abbreviations I.; M., W., F.; 1; (3). These are to be read first semester, Monday, Wednesday, and Friday, first period, three "hours."

AGRONOMY

I. Drainage, Fences, and Farm Buildings.—Location of drains, their construction, efficiency, cost, and durability, including leveling, digging, laying, filling, and subsequent care; also of sewers for disposal of the waste water of buildings and the sewage from kitchen and toilet. The different kinds of fences, their cost, construction, efficiency, and durability, including experience in setting anchor posts. The arrangement, design, and cost of farm buildings. I., first half; II., second half; daily; 3, 4; (2½). Mr. Crane.

ia. Farm Machinery.—The tools and machinery of the farm—hoes, spades, plows, harrows, cultivators, rollers, planters, cutters, grinders, mowers, rakes, binders, wagons, windmills, pumps, and engines—their design, construction, draft, efficiency, durability, and care. The laboratory work consists in setting up and testing machinery, in grinding, thread cutting, and the elements of machine repairing. I., second half; II., first half; daily; 3, 4; (2½). Mr. Crane.

ib. Special Work.—Students may arrange for special work in any of the foregoing lines covering drainage or farm machinery, either in the second semester or the summer.

2. Farm Crops.—Conditions of germination and growth and the circumstances modifying these conditions. Peculiarities of the different agricultural plants in respect to structure, habits, and requirements for successful growth. Their varieties and susceptibility to improvement; selection and breeding of corn and other
farm crops, and the varieties best adapted to Illinois conditions; weeds and weed seeds, their identification and methods of destruction; fungal diseases such as smut of wheat and oats; blight and rot of potatoes and methods of prevention; insects injurious to farm crops and how to combat them.

The above will be supplemented by laboratory and field work consisting of a study of vitality of seeds and their preservation; shrinkage of grain; root development of corn, clover, etc.; amount of seed of different crops to plant; methods of seeding clover, timothy and other forage crops; judging of corn, etc. I. and II.; daily; 1, 2; (5). Mr. Shamel.

2a. Special Crops.—Their history and distribution over the earth, with the particular study of those that flourish in the higher latitudes as to methods of culture, systems of production, consumption, and residues. In connection with this study is practical field experience in such work as testing varieties of potatoes, amount of seed, and methods of planting; varieties of corn, thickness and depth of planting; injury to roots by cultivation, effect of removing tassels, and the selection and breeding of corn and other crops; the amount of moisture required for different crops and different methods of producing oats and wheat, together with methods of seeding, and such other practices as apply directly to Illinois methods in this connection. Students have excellent opportunities to study the work of the Experiment Station. II. or summer; daily; arrange time; (5). Mr. Shamel.

Required: Agronomy 2.

3. Soil Physics and Management.—This course is designed to prepare the student better to understand the effects of the different methods of treatment of soils and the influence of these methods upon moisture, texture, aeration, fertility, and production. It comprises a study of the origin of soils, of the various methods of soil formation, of the wasting of soils by washing, and of their classification and composition; also soil moisture and means for conserving it, soil texture as affecting capillarity, osmosis, and diffusion, and as affected by plowing, harrowing, cultivating, rolling, and cropping; fall or spring plowing and drainage as affecting moisture, temperatures, and root development.

The work of the class room is supplemented by laboratory work, comprising the determination of such questions as specific gravity, relative gravity, water holding capacity and capillary power of various soils, also the study of the physical effects of different systems.
of rotation and of continuous cropping with various crops, and the mechanical analysis of soils. *I.* and *II.*; daily; 3 and 4; (5). Mr. Ward.

3a. **Special Problems in Soils.**—This work is intended for students wishing to specialize further along the lines of soil study, or for those wishing to do special work during the summer vacation, and will include the determination by electrical methods of the temperature, moisture, and soluble salt content of various soils under actual field conditions; effect of different depths of plowing, cultivation, and rolling on soil conditions; of the nature of the so-called "alkali," "barren" or "dead dog," and other peculiar soils of Illinois; of the effect of different kinds of fertilizers, and of the effects of different methods of preparing seed beds. *II.* or summer; daily; arrange time; (5). Mr. Ward.

4. **Soil Bacteriology.**—A study of the morphology and activities of the bacteria which are connected with the elaboration of plant food in the soil or which induce changes of vital importance to agriculture, with regard to the effects of cropping and tillage upon these organisms, and with special reference to the study of those forms which are concerned with the formation of nitrates and nitrites in the soil and with the accumulation of nitrogen by luguminous crops. *II.*; daily; 6, 7, and 8; (5). Mr. Ward.

*Required:* Regular admission; Botany 5; Chemistry 3b and 4.

5. **Fertilizers, Rotations, and Fertility.**—The influence of fertility, natural or supplied, upon the yield of various crops; the effect of different crops upon the soil and upon succeeding crops; different rotations and the ultimate effect of different systems of farming upon the productive capacity of soils.

The above will be supplemented by a laboratory study of manures, their composition and value; of soils cropped continuously with different crops and with a series of crops; of the fertility of soils from different sections of Illinois and at different depths. *II.*; daily; 4; (5). Professor Holden.

*Required:* Regular admission.

6. **Farm Management.**—Extensive and intensive methods of farming; handling of large and small farms; economic bestowal of labor and the profitable use of machinery; methods and systems of plowing, the advantages and disadvantages of each; different methods of raising and harvesting crops and the comparative efficiency and cost of each; the place of special crops; of live stock, fencing, and the rotation of crops in the economy of the farm; disposal of the crops
by marketing and by home consumption. Systems of farming now in use by the best farmers in the state will receive special attention. This work is designed to fit men to superintend or manage successfully farms either for themselves or for others. II.; daily; 5; (5). Professor Holden.

Required: Regular admission; two years of University work or its equivalent; Agronomy 5.

7. History of Agriculture.—Its development and practice with particular regard to the agriculture of those nations which have contributed most to agricultural progress, including a sketch of the earliest agricultural practices as illustrated by the agriculture of the Egyptians, Jews, Chinese, and other ancient peoples; followed by a study of the development of Roman agriculture and its influences upon the practices in other nations; a consideration of the beginnings and systems of British agriculture with regard to their influence upon social conditions; and, finally, a comparison of the characteristic features of American agriculture with those of the existing systems of other countries. I., first half; daily; 2; (2½). Mr. Ward.

8. Comparative Agriculture.—Influence of locality, climate, soil, race, customs, laws, religion, etc., upon the agriculture of a country, and incidentally upon its people. One crop only, and its effect, as rice; Indian corn in American agriculture and affairs. Varying conditions under which the same crop may be produced, as wheat. Statistical agriculture. Influence of machinery and of land titles, whether resting in the government, in landlord, or in occupant. Relation of agriculture to other industries and to the body politic. Lectures. II.; F.; 2; (I). Professor Davenport.

Required: Regular admission; two years of University work.

9. Agricultural Experimentation.—A systematic study of the work of experiment stations and experimenters in this and other countries, together with a critical study of correct principles and methods of experimentation, designed for such students as desire to fit themselves for work in original investigation in experiment stations or elsewhere. II.; daily; 4; (5). Professor Holden.

Required: Regular admission; two years' work in Agriculture.

10. Investigation and Thesis.—This course varies in the subject matter of study according to the department in which theses are written. The work is under the direction of the head of the department in which the work is done. I. and II.; arrange time; (5 to 10 in all).
ANIMAL HUSBANDRY

1. **ANIMAL TYPES.**—A critical study of the types of animals best suited to the production of meat, milk, and wool, and to the requirements of labor and ordinary driving, together with the characteristics of the principal breeds and their recognition at sight. Each student will make a careful study of the history and characteristics of a single breed and will be given practice in tracing lines of breeding in pedigree records.

Practice in judging three days per week, supplemented by lectures and reference readings, designed for students not specializing in animal husbandry. *II., second half; daily; 4 and 5; (2½). Mr. Kennedy.*

2. **LIVE STOCK MANAGEMENT.**—The housing, feed, and management of flocks and herds, and the care and surroundings of work horses and ordinary drivers. *II., first half; daily; 3; (2½). Mr. Kennedy.*

3. **SHEEP, MUTTON, AND WOOL.**—Exhaustive study of mutton cuts and of grades of wool and their uses in the manufactures, together with the history, development, and character of the several breeds, the location of the principal flocks, the methods of the most successful flock masters, and the economic production of mutton and wool for the markets of the world. Lectures and assigned readings, with practice in judging, three days per week. *I., first half; daily; 4 and 5; (2½). Mr. Kennedy.*

4. **BEEF, CATTLE, AND SWINE.**—The cuts of meat, their comparative quality and cost, with the economic production of beef and pork and the by-products of the slaughter-house; followed by the history, development and characteristics of the beef breeds and of swine, together with the location of the great breeding herds and the methods of the most successful stockmen. Attention is given to the non-specialized and dairy breeds as beef producers. Practice in judging three days per week, supplemented by lectures and assigned readings. *I., first half; daily; 6 and 7; (2½). Mr. Kennedy.*

5. **DAIRY CATTLE AND OTHER BREEDS.**—The same critical study of dairy cattle and dairy breeds as is outlined for beef, followed by a study of non-specialized breeds. Practice in judging, three days per week, supplemented by lectures and assigned readings. *I., second half; daily; 6 and 7; (2½). Mr. Kennedy.*

6. **DRAFT AND COACH HORSES.**—The horse market and its demands, followed by a critical study of draft and coach horses, and
of methods of producing the market horse in heavy and medium classes. Lectures, reference readings, and practice in judging, including examination for soundness. **II., first half; daily; 6 and 7; (2½).** Mr. **Kennedy.**

7. **Light Horses.**—Hackneys, Morgans, thoroughbreds, trotters, saddlers, and ponies, their characteristics and history, and the classes of light horses demanded by market conditions, together with the training of drivers and saddlers. Lectures, reference readings, and judging, including examination for soundness. **II., second half; daily; 6 and 7; (2½).** Professor **Davenport** and Mr. **Kennedy.**

8. **Stock Feeding.**—The functional activities of the animal body and the end products of their metabolism. Foods are considered, first, chemically as affording materials for the construction of the body tissues or of animal products, as meat, milk, wool, etc.; second, dynamically as supplying the potential energy for the body processes and for external labor; third, as to the fertilizing value of their residues. There is involved a study from the breeder’s standpoint of the perfect development of the animal after birth, and also of the phenomena of animal nutrition from the economic standpoint, in which animal activity is considered as an agent for transformation of energy, and the manufacture of animal products as a source of profit. **II.; daily; 4; (5).** Professor **Davenport.**

**Required:** Regular admission; two years of Science; including Chemistry 1, 3, and 4.

9. **Breeding.**—The principles and phenomena of evolution as applicable to the improvement of animals and plants; variation, its nature, extent, importance, and causes; correlated variation, the effects of use and disuse, and the influence of environment; the nature and operations of heredity, particularly as to inheritance of acquired characters; instinct and intelligence; panmixia, and disappearance of characters; latent characters and reversion; inbreeding and outbreeding, hybridism, crossing, and grading—all as bearing upon the efficiency of selection and care. The aim is to bring every known principle of reproduction to the assistance of the breeders' art. **II.; daily; 3; (5).** Professor **Davenport.**

**Required:** Regular admission; two years of University work, including one year of Botany or Zoology.

10. **Investigation and Thesis.**—Upon lines to be arranged with instructor for one or both semesters, according to nature of the subject. **(5) to (10).** Professor **Davenport** and Mr. **Kennedy.**
ANTHROPOLOGY

1. General Anthropology.—This course begins with a study of the physical and psychical elements of ethnography. Theories as to the origin of man are discussed, and the various races of mankind are distinguished and described. Special attention is given to the historical and comparative study of customs, ceremonies, rights, beliefs, and folklore of primitive peoples, with reference to the common characteristics and fundamental instincts of mankind, and to the origin and growth of existing customs and social institutions. I., M., W., F.; 1; (3). Professor Daniels.

Required: A major or minor course in economics, geology, psychology, or zoology.

ARCHITECTURE

2. Wood Construction.—Formulæ and data for computing dimensions and strength of columns, beams, girders, etc., of wood or metal, are given and applied in the solution of examples. Wood and its uses in construction and decoration, seasoning, shrinkage, defects, and modes of protection from decay. Construction and design of wooden floors, walls, ceilings, and roofs, and joinery, doors, windows, bays, inside finish, cornices, wainscoting, stairs, etc. Kidder's Building Construction and Superintendence; Part II.; Jones's Logarithmic Tables. I.; M., W.; 6, 7, and 8; (3). Assistant Professor McLane.

Required: General Engineering Drawing 1, 2.

3. Masonry and Metal Construction.—Foundations of stone, brick, concrete, and piles; materials employed in stone masonry, their uses, defects, qualities, and modes of preparation. Kinds of masonry and external finish. Tools for stone cutting and their use. Preparation of working drawings, with application to the arch, vault, and dome. Brick masonry, its materials, and bonds. Manufacture and refining of cast iron, wrought iron, and steel, with processes of pattern-making, molding, casting, refining, rolling, etc., and standard dimensions or sections. Special properties and value of metal in a structure, designing a line of columns in mercantile building, and of beams, girders, and footings, together with the study of joints and connections. Kidder's Building Construction and Superintendence, Part I. II.; Tu., F.; 6, 7, and 8; (3). Assistant Professor McLane.

Required: General Engineering Drawing 1, 2.
4. **Sanitary Construction.**—Recitations and lectures, designs for special problems. Study of plumbing, trap ventilation, removal of wastes, construction of water closets, drains, and systems of water supply; sewage disposal. Water supply and fixtures in dwellings. Gerhard's Sanitary Engineering; Lectures on Sewage Disposal. I.; Tu., Th., F.; 6; (3). Assistant Professor McLane.

**Required:** Physics 1, 3; Arch. 2, 3.

5. **Graphic Statics and Roofs.**—Elements of graphic statics and applications in designing trussed roofs. Forces, equilibrium, reactions, moments, bending moments, and shears on beams, center of gravity, moment of inertia and kern of cross sections. Construction of wooden and of metallic roofs, mode of computing loads on roof trusses, obtaining end reactions, drawing strain diagrams, and determining sectional dimensions of members, with the designing of joint connections. Ricker's Trussed Roofs; Ricker's Elementary Graphic Statics. II.; M., W., F.; Section A, 1, Section B, 2; also 3 hours' drawing a week; (3). Assistant Professor McLane.

**Required:** Math. 2, 4, 6; Theoretical and Applied Mechanics 1 and 2 or 4 and 5.

6. **History of Architecture.**—Continues through the year and is taken with architecture 7 and 11. Commencing with Egyptian and ending with modern styles, a careful study is made of the more important styles, examining historical conditions, local and inherited influences, structural materials and system, special ornaments, purposes and designs of the buildings, with the most important typical examples of each style. Especial attention given to ideas useful or suggestive in American work, and to tracing gradual evolution of architectural forms. One recitation and two illustrated lectures a week. References made to Fergusson, Lubke, Durm, Reber, Gailhabaud, etc. Hamlin's History of Architecture; Van Dyke's History of Painting; Marquand's History of Sculpture. I.; M., Tu., W.; 4; (3). II.; M., Tu., W.; 3; (3). Professor Ricker.

**Required:** Architecture 4.

7. **Details of Styles.**—Exercises in drawing at large scale the most important details of the Grecian, Roman, Early Christian, Byzantine, Mohammedan, Romanesque, Gothic, and Renaissance styles. Taken with Architecture 6. Notes and Sketches. I.; Th., except last in the month; 1, 2, 3, and 4; (1). II.; W.; 6, 7, and 8; (1). Assistant Professor McLane.

**Required:** Architecture 2, 3, 8.

8. **The Orders of Architecture.**—A study of the Five Orders
of Architecture, and architectural Shades and Shadows. A careful
study of the proportions and details of the Orders is first made with
lectures, recitations, blackboard sketches from memory, and problems
requiring the use of the Orders. *Ware's Five Orders; Lectures on
Shades and Shadows.* I.; Tu., 4, 6, 7, and 8; Th., 6, 7, and 8; (3).
Assistant Professor Temple.

*Required:* Gen. Eng'g Drawing 1, 2; Architecture 20 or 21.

9. **MONTHLY PROBLEMS.**—Preliminary instruction in render-
ing.—An entire day in each month during the second and third years
is devoted to a problem in design, requiring the use of the Orders.
Program is made known at beginning of the exercise, and sketches
must be completed and rendered during the same day. Credit is
given for this study only after the completion of each year. *I. and II.,
the last Th. in each month, all day; (½ for each semester).* Assistant
Professor Temple.

*Required:* General Engineering Drawing 1, 2.

10. **WORKING DRAWINGS.**—Conventional methods for represent-
ing the different parts of buildings in general and in detail, conven-
tional colors and sectioning; systems of lettering and figuring draw-
ings; working drawings; tracing; drawing for copying. *II.; Tu.;
6, 7, and 8; (1).* Associate Professor White.

*Required:* Architecture 2 and 3.

11. **ARCHITECTURAL SEMINARY.**—Reports and discussions of
original investigations of assigned topics in History of Architecture;
reviews of books, abstracts of current technical journals, and other
publications. Taken with Arch. 6 and 7. *I.; F.; 4. II.; F.; 3; (1).* Professor Ricker.

12. **SUPERINTENDENCE, ESTIMATES, AND SPECIFICATIONS.**—This
study comprises several specialties not otherwise provided for, so
far as they can be taught in a professional school. The subjects
treated include the duties of a superintendent, his relations to archi-
tect, owner, and contractor, the method of supervising work, systems
of keeping building accounts, the usual methods of measurement
of materials and work, arrangement of computations in proper and
convenient order, and approximate prices of material and labor,
which vary in different localities. The methods of estimating by
squaring, cubing, units, and quantities are each employed and illus-
trated by problems. A study is made of the general and special
clauses of specifications and of their arrangement, as well as of
methods of classifying material to facilitate writing specifications.
Practice is obtained by writing several sets. *Clarke's Building*
Superintendence; Lectures on Building Law; Hodgson's Estimating; Bower's Specifications. I.; Tu., W., 5; Th., 4 and 5; (3). Associate Professor White.

Required: Architecture 4.

13. Heating and Ventilation.—Scientific theory and practice of warming and ventilating buildings is the object of this study. Commencing with fuels and production of heat, then passing to flow of gases through ajutages and pipes, applying these data to calculation of dimensions of air ducts and chimneys. Different systems of heating by furnaces, hot water, steam, etc., are next examined, with details of each. Sources of impurity in the air and requirements of good ventilation are then considered, with the different methods of ventilation by aspiration, by fans, etc., ending with the study of fans of different types. Numerous problems are given, and heating plants designed. Carpenter's Heating and Ventilating Buildings; Ricker's Notes on Heating and Ventilation. I.; M., P., 4 and 5; Tu., W., 4; (4). Associate Professor White.

Required: Architecture 4, 15; Physics 1, 3.

14. Architectural Perspective.—Theory of perspective is taught with labor-saving methods of abbreviating work, and designing in perspective is made a special aim, being very useful to a draftsman in preparing sketches for clients. Problems in angular, parallel, vertical, and curvilinear perspective, as well as in perspective shades and shadows, are solved, requiring original work as far as possible, so as thoroughly to prepare the student for any kind of work in perspective, instead of restricting him to the study and use of a single system. Ware's Modern Perspective. II.; Tu., 6, 7, and 8; Th., 3, 6, 7, and 8; (3). Assistant Professor Temple and Professor Wells.

Required: General Engineering Drawing 1, 2; Architecture 2, 3, 8, 20 or 21.

15. Requirements and Planning of Buildings.—Lectures are fully illustrated by plans sketched on the blackboard, which must be embodied in students' notes. Numerous problems in planning are given. II.; M., W.; 3 and 4; Th., except last in month; 1, 2, 3, 4, and 5; (3). Associate Professor White.

Required: General Engineering Drawing 1, 2; Architecture 2.

16. Residence Design.—Practice in design, and study of the requirements for dwellings. The work is limited to residences, since this class of buildings is likely to afford the graduate his first opportunity for independent original work. Osborne's Notes on House
Planning. Lectures and blackboard speeches to be copied in students' notes. II.; Tu.; 3 and 4; F.; 4 and 5; (2). Associate Professor WHITE.

Required: Architecture 4, 8.

17. ARCHITECTURAL DESIGNING.—Elementary architectural forms are first traced and sketched from memory; simple problems in design are then solved by sketch plans, elevations and sections, rendered in shade or color as required. The object is to obtain as much practice in original design as possible, and to form a collection of suggestive tracings and sketches. I.; M., W., F.; 1, 2, and 3; (3). Assistant Professor TEMPLE.

Required: Architecture 6, 7, 8, 9, 11, 20 or 21.

18. ARCHITECTURAL COMPOSITION.—A careful study is made of the laws of architectural design and of the results of experience embodied in the text-book, with numerous references to other authors. Commences with general principles, passing to an examination of proportions employed in most important styles, arrangement of plan, external design in general and detail, ceilings, and interiors, arrangement of corridors, stairways, and entrances, of internal courts, and of halls for large assemblages. Frequent problems in design afford practical applications of the principles. Ricker's Translation of Architektonische Composition (Handbuch der Architektur). II.; M., Tu., W., Th.; 4 and 5; (4). Professor RICKER.

Required: Architecture 6, 7, 11, 17, 20 or 21.

19. ARCHITECTURAL ENGINEERING.—This continues the study of graphic statics, commenced in "Graphic Statics and Roofs," with applications to metallic roofs of wide span, roof trusses of curved or unusual form, and those supported by abutments and jointed. Spherical and conical trussed domes. Effect of moving loads on girders, the graphical analysis of the arch, vault, and dome, and of the Gothic system of vault and buttress. Construction and details of steel skeleton buildings. Practical applications are made to a series of problems in design for specified cases. Ricker's Notes on Advanced Graphics; Freitag's Architectural Engineering; Ricker's Translation of Wittman's Arch and Vault. References to the works of Planat, Landsberg, DuBois, Clarke, Ott, Levy, Muller-Breslau, etc., on Graphic Statics. I.; Tu., W., Th.; 7; (3). Associate Professor WHITE.

Required: Math. 2, 4, 6, 7, 9; Theoretical and Applied Mechanics 1 and 2; Architecture 2, 3, 4, 5.
20. Prescribed.
   Any courses offered in Art and Design amounting to three semester hours. *I. and II.; daily; (3). Professor Frederick.*

   Any advanced courses offered in Art and Design. *I. and II.; daily; Professor Frederick.*

   **Required:** Architecture 20.
   The art and design courses offered as Architecture 20 and 21 are varied to meet the special needs of students of architecture.

22. Renaissance Design.—A prescribed series of tracings of important details is made, and problems in design are worked out as fully as time permits. *I.; M., W., F.; 6, 7, and 8; (3). Assistant Professor Temple.*

   **Required:** Architecture 17, 18.

22b. Renaissance Design.—More advanced design of the same character as 22. This may be taken instead of Architecture 23 or 24. *I.; Tu., Th.; 1, 2, and 3; (2). Assistant Professor Temple.*

   **Required:** Architecture 17, 18, 22.

23. Gothic Design.—*I.; M., W. or Tu., F., 2 and 3; Th., 2; (2). Ricker's Translation of "Redtenbacher's Leitfaden." Professor Ricker and Associate Professor White.*

24. Romanesque Design.—*I.; M., W. or Tu., F., 2 and 3; Th., 2; (2). In each of these courses, 23 and 24, a prescribed series of tracings of important details is made, and problems in construction and design are worked out as fully as time permits. The same recitations and lectures will be taken together for both courses. The work in Architecture 22b will be accepted in lieu of either of the above courses.*

   **Required:** Architecture 6, 7, 11, 14, 18, 20 or 21.

25. Design of Ornament.—The study of historical ornament with exercises in designing architectural ornament to decorate the structural forms usually found in practice. These designs will be charcoal or crayon sketches, drawings rendered in shade or color, or finished drawings. They will be made on as large a scale as possible, usually full size. *Lectures. Meyer's Hand-book of Ornament. II.; M., Tu., W.; 3, 4, and 5; (3). Assistant Professor Temple.*

   **Required:** Architecture 6, 7, 11, 17, 18, 20.

26. Vacation Sketches.—At the beginning of the third and fourth years, each student is expected to present a suitable number of vacation sketches for approval by Assistant Professor Temple.
27. **Domestic Architecture.** (For a class of not less than six students in Household Economics).—The elements of the planning, sanitation, decoration, and furnishing of dwellings.

One lecture weekly on planning and arrangement, with exercises in making skeleton plans, by Associate Professor White.

One lecture weekly on water supply and fixtures, sanitary fixtures and plumbing, heating, and ventilation, by Assistant Professor McLane.

One lecture weekly on decoration and furnishing by Professor Ricker.

A considerable amount of additional reading will be required. II.; *Arrange time; 2, 3 or 4; (3).*

28. **Mural Decoration.**—Includes the study and analysis of some of the best examples of modern decorated interiors; the appropriate use of various materials; the rendering of scale drawings in color, with especial reference to the esthetic effect produced by various harmonies of color. *I., II.; arrange time; (2).* Professor Wells.

29. **Short History of Architecture.**—(Elective for students in College of Literature and Arts). A careful study of the important historical styles of architecture, their origins, systems of construction, elementary forms, decoration by sculpture and painting, chief kinds of buildings, and a series of selected examples, illustrated by lantern slides. *Lectures with reading of Hamlin's History of Architecture. I.; any two days; 1 or 5; (2).* Professor Ricker.

**COURSES FOR GRADUATES**

**Primary**

102. Recent Uses of Stone, Brick, and Terra Cotta in Architecture.

103. Metallic Skeleton Buildings.

108. Heating and Ventilation of Large Buildings.

Translation of an approved Technical Architectural Work from the French or German.

Indexing and Classification of Periodicals, Books, Data, and Technical Information for Architects and Engineers.

Secondary

113. Stereotomy Applied to American Problems.
115. Photography for Architects.
116. Methods of Reproducing Drawings, Specifications, etc., for Architects.
117. Higher Problems and Methods in Perspective.
118. Practice in Estimates, Specifications, etc., for Large Buildings.
119. Higher Industrial Design.
120. Advanced Water-color Painting.
121. Study of Office Methods and Arrangements.
122. Any primary offered in the College of Engineering.
123. Electric Lighting and Wiring for Buildings.

ART AND DESIGN

1. FREE-HAND DRAWING.—Lectures on free-hand perspective illustrated by drawing from geometric solids. Principles applied by drawing in outline and in values common objects, as books, vases, chairs, etc.; casts of ornament; casts of details of the human figure and animal forms; interiors and exteriors of buildings; plants and flowers from nature. Exercises in design and lettering. I.; daily; section A, 1 and 2, section B, 3 and 4, section C, 6 and 7; (3). Mr. Lake.

2. CHIAROSCURO.—Study of the principles of light and shade, and practice in expressing color values, textures, etc., in charcoal, crayon, and chalk, drawings of still life. Sketching from life. Exercises in composition and design. Cross's Light and Shade. II.; daily; section A, 1 and 2, section B, 3 and 4, section C, 6 and 7; (3). Mr. Lake.

Required: Art and Design 1.

3. CAST DRAWING.—A course offered students who enter the department with a knowledge of perspective and chiaroscuro (courses 1 and 2), but without sufficient skill to enter advanced courses. Outline and shaded drawings from the antique and from
casts of ornament. Sketching from life. Exercises in design. I.;
daily; 3 and 4; (3). Professor Frederick.

4. Elementary Water-Color Painting.—Study of still-life
and casts in monochrome and color. Students sufficiently advanced
will be admitted to the out-door class, course 5, in May and June.
II.; daily; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7;
(3). Mr. Lake.

Required: Art and Design I.

5. Advanced Water-Color Painting.—Still-life, fruit and
flowers. Landscape sketching from nature. Pastels may be used
in place of water-colors if desired. II.; section A, M., W., F., 3
and 4; section B, M., W., F., 6 and 7; section C, Tu., Th., S., 3 and
4; (2). Professor Frederick.

Required: Art and Design 4.

Still-life, fruit and flowers in color. Landscape sketching from
nature. II.; section A, M., W., F., 3 and 4; section B, M., W., F.,
6 and 7; section C, Tu., Th., S., 3 and 4; (2). Professor Frederick.

Required: Art and Design I and 2 or 4.

7. Advanced Oil Painting.—Advanced work along same lines
as course 6. A special study of landscape painting may be made if
desired. II.; section A, Tu., Th., S., 3 and 4; section B, M., W., F.,
6 and 7 (2). Professor Frederick.

Required: Art and Design 6.

8. Modeling.—Details of human figure; copy of ornament;
ornament from photograph; original designs for iron and terracotta;
sketching from life. Casting in waste, draw, and piece molds.
Frederick's Plaster Casts and How They Are Made. I.; section A,
Tu., Th., S., 3 and 4; section B, M., W., F., 6 and 7; (2). Professor Frederick.

Required: Art and Design I or 3.

9. Advanced Modeling.—Bas-reliefs from antique figure; b st
from antique; anatomical rendering of an antique figure; sketching
from life; copy of statuette; original design introducing figure;
casting in gelatine and sulphur molds. I.; section A, Tu., Th., S.,
3 and 4; section B, M., W., F., 6 and 7; (2). Professor Frederick.

Required: Art and Design 8.

10a. Pen Rendering.—Architectural rendering; birds, shells,
flowers, etc.; drawings made with a view to their reproduction.
I.; S.; 3, 4 and 5; (1). Professor Frederick.

Required: Art and Design I or 3.
10b. DESIGN.—Book illustration; decorative lettering and design. I.; arrange hours; (1). Professor Frederick.

Required: Art and Design 10a.

11. PORTRAITURE.—Study of the head from life in charcoal and oil. I. and II.; daily; 6 and 7; (3). Professor Wells.

Required: Art and Design 1, 2 or 3, 6.

12. INDUSTRIAL DESIGN.—Study of the relation of design to manufacture. I. and II.; section A, M., W., F., 3 and 4; section B, M. W., F., 6 and 7; section C, Tu., Th., S., 3 and 4; (2). Professor Frederick.

Required: Art and Design 1, 2 or 3, 4, 8, 10a.

13. FIGURE DRAWING AND COMPOSITION.—Study of the human figure and its use in illustration and decoration. I. and II.; daily; 6 and 7; (3). Professor Wells.

Required: Art and Design 1, 2, 3, 4, 6, 7, 8, 11.

14. PERSPECTIVE.—A series of problems worked mechanically, illustrating the principles of perspective. I.; Tu.; 5; (1). Professor Frederick.

Required: Art and Design 1.

15. HISTORIC ORNAMENT.—Lectures upon the historic styles of ornament, with practice in drawing examples of each style. I.; Th.; 5; (1). Professor Frederick.

16. COLOR.—Lectures upon the chemistry of pigments with practice in carrying out a "theory of color." II.; Tu.; 5; (1). Professor Frederick.

17. THE GRAPHIC ARTS.—Illustrated lectures upon the history and present practice of the graphic arts. I.; arrange time. Professor Frederick.

18. ARTISTIC ANATOMY.—Practice in drawing the construction of the human figure from plates, casts, and skeleton. (The practical application of this is made in courses 3, 8, 9, 11, and 13.) II.; W.; 5; (1). Mr. Lake.

19. HISTORY AND CRITICISM OF PAINTING.—Illustrated lectures upon the history and criticism of painting. I. and II.; Th.; 9; (1). Professor Wells.

Courses 10b, 14, 15, 16, 17, 18, 19 require two hours of reading or drawing each week in addition to the hour of studio work.
4. **General Astronomy.**—Minor course. The course aims to supply a general knowledge of the facts of astronomy, a clear conception of underlying principles, and some acquaintance with the methods of arriving at these facts. Studies are made in the location of constellations and stars. In this course, practical questions are considered, though not made matters of chief importance, the literary and purely scientific features of the science being assigned chief prominence. *Young's Elements of Astronomy,* also *Young's General Astronomy. II.*; daily; section A, 4; section B, 6; (5). Professor Myers and Mr. Brenke.

**Required:** Mathematics 4.

5. **General Astronomy and Cosmogony.**—This is a continuation of course 4, and together with 4 it constitutes a line of study for students who wish to pursue astronomy as a major subject. In the latter part of this course the evidence both for and against the Nebular Theory is reviewed. The rôle of the tides in cosmogonic development receives special consideration, and the present view of the origin and cosmic history of the earth-moon system, together with the testimony of astronomy relating to it, are recapitulated to the epoch where astronomy yields to geology. A summarized statement of the results of the researches of Darwin and of Lord Kelvin is included. *I.*; *M.*, *W.*, *F.*; *b*; (3). Professor Myers and Mr. Brenke.

**Required:** An entrance credit in astronomy.

6. **Practical Astronomy.**—This course, which is offered both for engineers and special astronomical students, is intended to give the student training in the use of instruments of precision. As a subordinate matter, he is introduced to instruments of a higher grade than those employed in ordinary surveying. A second purpose of the course is to train the student in the art of computing. Model forms of record and reduction for problems are set before him, and the advantage of compact and orderly arrangement of all work is strenuously insisted upon. As a concrete outcome of the above training, the student should acquire the ability to determine latitude, time, and azimuth with such instruments as are used in the ordinary practice of civil engineering. An essential part of the work is the theory of astronomical instruments. *Campbell's Practical Astron-
omy. I.; Tu., Th.; 1 and 2; (2). Professor Myers and Mr. Brenke.

**Required:** Astronomy 4.

7. **THEORY OF ORBITS AND SPECIAL PERTURBATIONS.**—This course embraces the following subjects: The formation and integration of the differential equations of motion of a system of bodies and the derivation of the laws of undisturbed elliptic, parabolic, and hyperbolic motion. An investigation of the various formulæ and methods for finding the special perturbations of a heavenly body constitutes an essential part of this course. The methods of Encke, Hansen, and of Variation of Parameters, are developed and studied at length. Oppolzer's Lehrbuch der Bahnbestimmung. Professor Myers.

**Required:** Mathematics 1, 3, 7, 9, 14, 16; Astronomy 4.

9. **CELESTIAL MECHANICS.**—This course is a continuation of course 7, and has to do chiefly with the development and discussion of the absolute perturbations both for the case in which the orbital eccentricities and inclinations are small, and in which they are so large as to make the ordinary series too slowly convergent, or even divergent. Some time is also given to the study of subjects connected with figures of equilibrium of the heavenly bodies, and such other questions as are treated in Tisserand's Mecanique Celeste. Professor Myers.

**Required:** Astronomy 7.

10. **ASTRONOMICAL SEMINARY AND THESIS.**—The work of this seminary is on subjects either related to those considered in the senior courses, or connected with questions arising out of thesis investigations. This course is given in conjunction with Astronomy 7 and 9, or with Mathematics 12 and 13, according as the one or the other is current. I. and II.; Tu., Th.; 7; (2). Professor Myers.

11. **CALCULUS OF VARIATIONS.**—See Mathematics 20.

13. **POTENTIAL FUNCTION.**—See Mathematics 22.

14. **OBSERVATIONAL ASTRONOMY.**—The laboratory method of presentation is exclusively used in this course. Direct observational studies of celestial phenomena, with and without instrumental aid, constitute the major portion of the work. The problems set for solution will be largely individual and will be adapted to the degree of skill and maturity of the student. Advanced students may here find an introduction to the working methods of an astronomical observatory. In connection with Astronomy 5 it presents the underlying
principles and methods of astronomy from both the theoretical and practical sides, to such an extent as to meet the requirements of a liberal education. *I.; Tu., Th.; 5; (2).* Professor Myers and Mr. Brenke.

Required: Mathematics 1, 3.

BIOLOGY

1. Elementary Biology.—This is a laboratory and lecture course on the morphology, physiology, and ecology of both botanical and zoological types. The work is so directed as to lead to an acquaintance with the simpler generalizations of biology, and is intended as a preparation for the more extensive and thoroughgoing work of the major courses in botany and zoology. *I.; daily; 1 and 2; (5).* Assistant Professor Smith and Mr. Holferty.

2. Advanced General Biology.—For those who have taken a year’s work in either botany or zoology, a semester’s work in general biology is offered and especially recommended. It is intended to review, systematize, extend, and unify the student’s knowledge of the phenomena and laws of life and of the relations of plant and animal, of living and non-living matter, and of biology to the other sciences. It will be taught as a seminary subject, with occasional lectures and assigned readings. It is primarily a junior or senior study. *II.; daily; 6 and 7; (5).* Professors Burrill and Forbes.

Required: A major course in Botany or Zoology.

BOTANY

1. Histology and Physiology.—General vegetable histology and vegetable physiology, or an introductory study of the cells and tissues of plants and their courses of development in structures and organs; and studies in the general activities of plants correlated with external conditions. Lectures or recitations and laboratory work. *II.; daily; 6 and 7; (5).* Professor Burrill and Mr. Holferty.

Required: Entrance credit in Botany, or Biology 1; Chemistry 1; Art and Design 1.

2. Morphology.—The general morphology and taxonomy of plants, including a study of selected types in each of the great divisions of the vegetable kingdom. Lectures or recitations and laboratory work, with occasional field excursions. *I.; daily; 6 and 7; (5).* Professor Burrill and Mr. Holferty.

Required: Entrance credit in Botany, or Biology 1; Art and Design 1.
In courses 1 and 2 taken together, either in the order of the numbers or the reverse, there is offered a comprehensive treatment of the subject, to serve the double purpose of an introduction to the science for those who desire to continue the study, and as a complete course for general students. Each semester's work is, however, independent, and may be separately credited.

3. CYTOLOGY AND PHYSIOLOGY.—Mostly laboratory work and assigned reading. The course extends through the year, but the work of each semester may be credited separately under the designations of 3a and 3b. The first semester is devoted mainly to cytology and histology, with special attention to technique; during the second semester experimental physiology receives chief attention. I. and II.; daily; 1 and 2; (5 each semester). Professor Burrill and Mr.

Required: Botany 1.

4. TAXONOMY OF SPECIAL GROUPS.—Mostly laboratory and herbarium work, and assigned reading. Field excursions are required. The course extends through the year, but the work of each semester may be credited separately under the designations of 4a and 4b. The first semester is devoted mainly to spermaphytes, the second to sporophytes. I. and II.; daily; 1 and 2; (5 each semester).

Required: Botany 2.

5. BACTERIOLOGY.—An introduction to the knowledge of the subject and instruction in methods. Only those who can give extra time when occasion demands it should make application. II.; daily; 3 and 4; (5). Professor Burrill and Mr. Holferty.

Required: Chemistry 1, and at least one semester's work in Biology, Botany, or Zoölogy, in the University.

6. BACTERIOLOGY FOR SANITARY ENGINEERS.—Bacteriological methods and their application in water analysis and sewerage. I. (last seven weeks); daily; 3 and 4; (2). Professor Burrill and Mr. Holferty.

7. PLANT PATHOLOGY.—Diseases and injuries of plants. Mostly laboratory, herbarium, and field work and assigned reading. I.; M., W., F.; 1 and 2; (3). Professor Burrill and Mr. Clinton.

Required: Botany 1, 2.

8. ECONOMIC BOTANY.—Useful plants and plant products. Lectures and assigned reading. I.; Tu., Th.; 1 and 2; (2). Professor Burrill.

9. INVESTIGATIONS AND THESIS.—Research work upon selected subjects. Special arrangements for this work should be made during
the preceding year. *I. and II.; daily; arrange time;* (5). Professor Burrill.

*Required:* Botany 1, 2, and at least one year from 3, 4, 5, 7.

10. *Seminary.*—Reports and discussions upon assigned topics and results of research work. For advanced and graduate students. *I. and II.; F.; arrange time;* (1). Professor Burrill.

**Courses for Graduates**

101. **Biological Botany.**—The preparation and study of material by histological and embryological methods, and experiment work with living vegetation in the laboratory and field in working out special problems in the development, physiology, and pathology of plants.

102. **Systematic Botany.**—Critical and comparative studies of species included in chosen groups of spermaphytes or sporophytes, or from selected geographic areas, in connection with considerations of genealogic development, geographic distribution, and interrelated association.

103. **Bacteriology.**—Investigations upon morphologic and physiologic variation due to treatment; systematic studies upon the number, validity, and relationship of species; researches upon special saprophytic or parasitic kinds of bacteria and upon methods of favoring or combating their activities.

104. **Evolution of Plants.**—Observations and experiments upon plants and studies in related literature, in gaining information upon such topics as the following: The influence of environment, effects of self- and cross fertilization, tendencies of variation, philosophy of selection, nature and laws of heredity.

**Chemistry**

1. **Elementary and Experimental Chemistry.**—This course deals with the general principles of the science; the commoner elements only and their typical compounds are studied, and these are considered largely for the purpose of illustration.

The laboratory work comprises a series of such experiments, many of them quantitative, as serve best to illustrate the relations between the observed facts and the general principles, and to familiarize the student with the methods of chemistry. *Remsen’s Introduction to Chemistry. I.; Lecture, M., Tu., W., F., 5; Laboratory, section A, M., W., F., 1 and 2 or 2 and 3; section B., M., W., F., 6 and 7 or 7 and 8; section C (engineers only), Tu., Th., 6 and 7 or*
CHEMISTRY

7 and 8; for engineers, (4); for all others, (5). Professor Palmer, Associate Professor Grindley, Mr. Sammis, and Mr. Fraprie.

1a. MINOR COURSE—ELEMENTARY AND EXPERIMENTAL CHEMISTRY.—Similar to 1, but comprising only recitations and laboratory work. Remsen’s Introduction to Chemistry. II.; Recitations, Tu., Th., S., 1; Laboratory, M., W., F., 1 and 2; (5). Associate Professor Grindley and Mr. Sammis.

2. DESCRIPTIVE INORGANIC CHEMISTRY.—This course is required of all chemical students. It is mainly devoted to a study of the metallic elements, their classification, compounds, and chemical properties. The work is from lectures and assigned texts, without laboratory work. Remsen’s Advanced Course. II.; section A, M., W., F.; 1; section B, M., W., F.; 2; (3). Associate Professor Grindley.

Required: Chemistry 1.

2a. INORGANIC PREPARATIONS.—This is a laboratory course designed to accompany the descriptive work of course 2. The work includes the precipitation, crystallization, and purification of various salts, the material being largely obtained from laboratory wastes. Thorp’s Inorganic Chemical Preparations. II.; Tu., Th.; 1, 2, and 3; (3). Associate Professor Grindley, and Mr. Sammis.

Required: Chemistry 1.

3a. QUALITATIVE ANALYSIS.—This course includes a study of salts, their formation, solubilities, chemical reactions, etc. The periodic classification of the elements is made the basis for developing the principles of analysis. The work in the laboratory, after illustrating these principles, is occupied with the determination of basic and acid constituents of a given number of unknown substances. Analysis is also made of more complex substances, including natural and commercial products; and the work concludes with a comparative study of methods, difficult separations and problems in synthesis. I. or II.; Lecture, section A, Tu., Th., 5; section B, Tu., Th., 8; Laboratory, daily, section A, 3 and 4; section B, 6 and 7; section C, M., W., F., 3, 4, and 5; (5; for engineers, 3). Associate Professor Grindley, Mr. Sammis, and Mr. Fraprie.

Required: Chemistry 1.

3b. QUALITATIVE ANALYSIS, MINOR.—Same as 3a, but requiring the first half of the semester; (3). Associate Professor Grindley, Mr. Sammis, and Mr. Fraprie.

Required: Chemistry 1.

4. ELEMENTS OF ORGANIC CHEMISTRY, MINOR.—A course in
194 GENERAL DESCRIPTION OF COURSES

organic chemistry, provided more especially for students of agriculture and natural science. The instruction is directed mainly to the consideration of the general characteristics and the mutual relations of certain of the more important classes of carbon compounds, particularly the fats, the carbohydrates, and the proteids. II. (last half); Lecture, M., W., F., 3; Laboratory, Tu., Th., 3, 4, and 5; (2). Professor Palmer and Mr. Sammis.

Required: Chemistry 1, 3b.

5a. Quantitative Analysis.—General principles and practice of gravimetric and volumetric analysis. This course is directed particularly to the general principles of quantitative analysis, including stoichiometry and the analysis of silicates. It is preliminary to all other courses in quantitative analysis. Lectures and assigned text from Fresenius, Cairns, and the journals. I. or II.; Lecture, M., W., 6; Laboratory, 10 periods a week, arrange time; (5). Professor Parr, Mr. Rose, and Mr. Walton.

Required: Chemistry 3a.

5b. Analysis of Various Inorganic Substances, as clay, soils, ores, fertilizers, etc., etc. I. or II.; Lectures, Tu., 5; Laboratory, 6 or 12 periods a week; arrange time; (3 or 5). Mr. Rose and Mr. Walton.

Required: Chemistry 5a.

5c. Examination and Analysis of Foodstuffs, as milk, butter, cereals, meats, etc. II.; Lecture, Th., 5; Laboratory, 4 or 12 periods a week; arrange time; (2 or 5). Mr. Rose.

Required: Chemistry 5a.

6a. Chemical Technology.—This is a course of lectures comprising a study of technological chemistry as illustrated in those industries having a chemical basis for their principal operations and processes. Much use is made of the journals. Thorp's Industrial Chemistry is used as a guide. No laboratory work. II.; M., W.; 3; (2). Professor Parr.

Required: Chemistry 3a.

6b. Metallurgy.—Special attention is given to the effect of impurities in ores upon metallurgical processes and finished products. Fuels, refractory materials, and fluxes are described and their value and application explained. A series of lantern slides illustrating actual plants in operation together with specimens of furnace material and products are used in illustration. Much use is made of journals, annuals, and monographs setting forth the best practice. I.; M., W., F.; 3; (3). Professor Parr.

Required: Chemistry 5a.
7. (a) **Physical Chemistry.**—A course in physical chemistry, consisting mainly of laboratory work. It comprises determinations of vapor density, specific heat, depression of freezing point, elevation of boiling point, electrical conductivity, etc., and calculation of molecular and atomic weights from the data thus obtained.

(b) Thermochemistry, including use of the bomb calorimeter.

(c) Use of Spectroscope and polariscope for determination of constants and for quantitative analysis. *I. or II.; arrange time; (3, 5, or 10).* Professor Palmer and Mr. Fraprie.

*Required:* Chemistry 2, 5a; Physics 1, 3.

8. **Iron and Steel Analysis.**—Analyses are made of all the constituents by both rapid or technical and standard methods. The course also includes the analysis of furnace slags and a study of the methods for decomposing ores and refractory products. *II.; daily; arrange time; (3).* Professor Parr.

*Required:* Chemistry 5a.

9. **Organic Chemistry.**—The work of this course consists in the detailed discussion of the characteristics of several of the more typical and simple organic compounds, followed by the briefer consideration of most of the important classes of the derivatives of carbon. Remsen's *Organic Chemistry* is used as a text-book, and Richter's *Organic Chemistry* as a reference book. Must be accompanied by either 9a, 9b, or 9c. *II.; M., W., F.; 7; (3).* Professor Palmer and Mr. Rose.

*Required:* Chemistry 2, 5a.

9a. **Organic Synthesis.**—Laboratory work for students of the chemical course, consisting of the preparation of the typical organic compounds. *II.; arrange time; (2).* Professor Palmer and Mr. Rose.

9b. **Organic Analysis.**—Laboratory work for students of the chemical course, consisting of either ultimate organic analysis or proximate organic analysis, or both. *I.; Laboratory, 9 or 15 periods a week; arrange time; (3 or 5).* Professor Palmer and Mr. Rose.

9c. Laboratory work in organic chemistry for students of the medical preparatory course. A few typical organic compounds are prepared, but the work consists mainly in a study of the chemical reactions and transformations of such organic substances as are especially involved in processes of nutrition or are used in medical practice. *II.; Laboratory, 6 or 15 periods a week; arrange time; (2 or 5).* Professor Palmer and Mr. Rose.

10. **Sanitary Analysis.**—The work consists in the examination
and analysis of potable and mineral waters, air, etc. \( I.; M., W., F., \) or daily; \( 3 \) and \( 4; (3 \) or \( 5). \) Professor Palmer and Mr. Rose.

Required: Chemistry 5a or 20.

11. Investigations and Thesis.—Candidates for graduation from the chemical courses are required to devote at least three hours per day for one year to the investigation of some selected chemical subject, the results of which are to be embodied in a thesis. The subject must be determined upon by consultation with the professors of chemistry before the first Monday in November. Between that time and the end of the holiday recess an index to the bibliography of the subject must be prepared and presented to the professor in charge of the investigation. \( I. \) and \( II.; 15 \) periods a week; arrange time; \( (5 \) each semester). Professors Palmer and Parr, and Associate Professor Grindley.

Required: Chemistry, 30 hours.

12. Theoretical Chemistry.—A course of instruction which includes discussions of the principles and theories of general chemistry. Ostwald's Outlines of General Chemistry, and Nernst's Theoretical Chemistry. \( II.; M., W., F.; 2; (3). \) Professor Palmer.

Required: Chemistry 2, 5a, and either 4 or 9.

13. Agricultural Chemistry.—A course of lectures upon the chemical principles and processes involved in agriculture, taken conjointly with laboratory practice in analysis of agricultural products and materials. The work includes the quantitative separation and estimation of the constituents of agricultural products, analysis of fertilizers, soils, rain and drain waters, plants, foods, dairy products, etc. Johnson's How Crops Grow and How Crops Feed; Storer's Chemistry in Its Applications to Agriculture. \( I. \) and \( II.; daily; 3; (5 \) each semester). Associate Professor Grindley.

Required: Chemistry 3b, 4.

14. Organic Chemistry.—Lectures and reading upon special chapters of organic chemistry. \( I.; \ Tu., Th.; 7; (2). \) Professor Palmer and .............

Required: Chemistry 9.

15. (a) and (b) Metallurgical Chemistry.—This course includes (a) the wet assay of copper, lead, zinc, and other ores, arsenical and complex as well as the simpler forms, also the analysis of finished metallurgical products; as, commercial lead, spelter, copper, etc.; during the last half of the term the work is occupied (b) with the fire assay of lead, gold, and silver ores. Fluxes, reagents, and charges are studied in connection with various typical ores and
practice given in use of the crucible and muffle furnaces and in the manipulations connected with fire assaying. I.; M., W., F.; 3, 4, and 5; (4). Professor Parr and Mr. Rose.

Required: Chemistry 5a; Mineralogy 1.

15. (c) and (d) Electro-Chemical Analysis.—A study (c) of methods and practice in quantitative determination by electrolytic separation and deposition of metals and compounds, and (d) a study of the methods employed in the electrolytic separation and refining of metals, treatment of ores, etc. The laboratory work involves practice in actual separations, a quantitative check being made on all results. II.; M., W., F., or daily; 3, 4, and 5; (3 to 5). Professor Parr and Mr. Rose.

Required: Chemistry 5a.

16. Chemistry for Engineers.—This course is arranged particularly for mechanical engineers. It involves the proximate analysis of coals, determination of calorific power, technical analysis of furnace gases, examination of boiler waters, lubricating oils, etc. II.; Lecture, F., 5; Laboratory, section B, Th., 3, 4, 5; F., 3, 4; section A, W.; 4, 5; Th., 3, 4, 5; (3). Professor Parr.

Required: Chemistry 5a, 18.

17. Industrial Chemistry.—A laboratory course in the preparation of chemical products from raw materials. The manufacture and proving of pure chemicals, fractionation, and other processes of the manufacturing chemist. II.; daily; Laboratory 15 periods a week, arrange time; (5). Professor Parr.

Required: Chemistry 5a, 18.

18. Special Advanced Courses.—Special courses as indicated below, consisting mainly of laboratory work, may be arranged for those competent to pursue them. From 1 to 10 hours' credit will be allowed in the undergraduate courses for such work.

(a) Technical Gas Analysis, 1 hour to 3 hours.
(b) Metallurgical Chemistry, 3 hours to 10 hours.
(c) Chemistry of beet sugar industry, 2 hours to 10 hours.
(d) Analysis of paints, oils, and varnishes, 2 to 5 hours.

Arrange time. Professors Palmer and Parr.

19. Seminary.—Reports and discussions upon assigned topics from current chemical literature. One session each fortnight during the junior and senior years. S.; (1). Professor Palmer and Mr. Rose.

20. Quantitative Analysis.—An elementary course intended especially for such students of other departments as desire some
I9

S

GENERAL DESCRIPTION OF COURSES

training in the processes of quantitative analysis, but have not the time or the opportunity to enter the regular course in this subject. The work may vary in character, to some extent, according to the need of the individual student. I. or II.; any two or four days; arrange time; (2 or 3). Mr. Rose.

21. PROXIMATE ORGANIC ANALYSIS.—The analysis and valuation of various commercial organic materials and products, including fats, oils, food stuffs, beverages, plants, drugs, medicines, nostrums, etc. One or two semesters; Laboratory, 15 periods, arrange time; (5 or 10). Professor Palmer and Mr. Rose.

22a. PHOTOGRAPHY.—Offered to engineering students and others who wish to obtain a general knowledge of photography. In this course the general subject is covered by lectures and laboratory work, the latter varying to some extent to suit the special line of work that the student expects to follow. I.; Lecture, Tu., Th., 6; Laboratory, 4 periods, time to be arranged; (2). Professor Parr and Mr. Wilder.

Required: Physics 1, 3; Chemistry 3b, unless otherwise arranged.

22b. PHOTOGRAPHY.—Offered especially for scientific students and others desiring a more thorough knowledge of photography than is offered in course 22a. This course is of special value to any intending to teach those branches in which the optical lantern is extensively used. The early part of the course is devoted to a general review of the methods and practices of photography, with sufficient laboratory work to make the student familiar with the same. Following this some time is devoted to the optical lantern, with sufficient practice on the part of the student to familiarize him with the manipulation of such apparatus. This is accompanied by instruction in the making and use of lantern slides. Instruction in photography also has a place in this course, and students so desiring may pursue such work as far as time and the facilities of the department will allow. II.; Lecture, M., W., F.; Laboratory, 6 periods, time to be arranged; (3). Professor Parr and Mr. Wilder.

Required: Chemistry 3a; Physics 1, 3. In College of Science, when recommended by Dean, these requirements may be omitted.

22c. REPRODUCTION OF DRAWINGS, ETC.—Provision is here made for a general course in the methods of reproduction made use of in the engineering professions. Blue-printing, black-printing, hectographing, and the other methods in use are explained by lectures and laboratory work. No distinct credit is given for such work, but the
time so spent is deducted from that required in other courses, and so credited to the student doing the work. This work is offered to such students as may be required to do it as a part of some regular course, the time so spent to be determined by the instructor having such regular course in charge, and to students who elect it with approval of the proper authority. Mr. Wilder.

23 (a) and (b). Household Chemistry.—The first semester is largely devoted to practice in general analytical methods, both gravimetric and volumetric. The second is occupied chiefly with the examination of materials used in the household. Analyses are made of baking powders, vinegars, syrups, sugars, soaps, soap powders, wallpapers, etc. I. and II.; daily; 6 and 7; (5 each semester). Professor Parr and Mr. Rose.

Required: Chemistry 3a.

24. Toxicology.—Mainly laboratory work upon the detection and estimation of the more common poisons, organic and inorganic. Wall papers, etc. I. and II.; daily; 6 and 7; (5 each semester). Professor Palmer and Mr. —

Required: Chemistry 2, 3b, 5a, and either 4 or 9.

25. Urinalysis.—Chemical and microscopic examination of urine. I. or II.; Laboratory 6 periods, arrange time; (2). Mr. Rose.

Required: Chemistry 2, 3b, 5a.

COURSES FOR GRADUATES

101. Organic Chemistry.—Special investigations in the aliphatic or in the aromatic series.

102. Inorganic Chemistry.—Research work in general inorganic chemistry, including the critical and constructive study of methods of analysis, both quantitative and qualitative.

103. Physical Chemistry.—Investigation of special problems, including also thermo-chemical research.

104. Chemistry of Foods.—Investigations of the composition, fuel value, digestibility, and dietary value of foods and the chemical changes involved in cooking.

105. Agricultural Chemistry.—Special investigations in the field of agricultural chemistry, including the chemistry of plants, foods, soils, and rain, drain and ground waters.

106. Research in Metallurgical Chemistry.—(a) Action of solvents in extraction of gold and silver from their ores. (b) Methods of analysis of ores and products.
107. INVESTIGATION OF WATER SUPPLIES.—In connection with State Water Survey.

108. INVESTIGATION OF FUELS.—
   (a) Heating power, calorimetric methods.
   (b) Adaptation of bituminous coal to gas manufacture, purification of products.
   (c) Coke and by-products.

109. SPECIAL PROBLEMS IN INDUSTRIAL CHEMISTRY.—
   (a) Corrosion and scaling of steam boilers.
   (b) Purification of feed waters.
   (c) Cements and mortars.
   (d) Paints and pigments.

CIVIL ENGINEERING

1. LAND SURVEYING.—Areas and distances by chain, compass, and plane table; U. S. public land surveys, including legal points involved in the reestablishment of boundaries; magnetic variation and determination of true meridian. The students solve numerous problems in the field with instruments. Bellows and Hodgman's Surveyor’s Manual. I.; daily; 6 and 7; (5). Assistant Professor RETCHUM.

Required: General Engineering Drawing 1, 2; Math. 3.

2. TOPOGRAPHICAL DRAWING AND SURVEYING.—Topographical drawing is given during the bad weather of the first semester. During the second semester topographical surveying is taught, in which students solve problems with the plane table and the stadia, and make a topographical survey and plot the notes. This subject must be taken the first semester in connection with course 1 above, and the second semester in connection with course 3 below.

3. TRANSIT SURVEYING AND LEVELING.—Construction, adjustment, and use of the transit and level; angles, inaccessible distances, and areas with the transit; profiles and contours with the level. The instruments are in constant use by the students whenever the weather permits. In connection with this subject students may receive instruction in blue-printing, etc., chemistry 22c. Baker’s Engineers’ Surveying Instruments. II.; daily; Section A, 2 and 3, Section B, 6 and 7; (5). Assistant Professor KETCHUM.

Required: Civil Engineering 1.

4. RAILROAD ENGINEERING.—In the field practice the class makes preliminary and location surveys of a line of railroad of sufficient length to secure familiarity with the methods of actual practice. Each
student makes a complete set of notes, maps, profiles, calculations, and estimates. Godwin’s Railroad Engineers’ Field-Book, and Tratman’s Track. I.; M., W., F.; 6, 7, and 8; Tu., Th.; three periods; S.; forenoon; (5). Assistant Professor KETCHUM.

Required: Civil Engineering 1, 2, 3.

4a. RAILROAD ENGINEERING.—The first eleven weeks of course 4 are for students in municipal and sanitary engineering. (3).

5. MASONRY CONSTRUCTION.—The students have experiments in the masonry laboratory, in testing cement, mortar, stone, and brick. Baker’s Masonry Construction. I.; M., Tu., W., Th., 1; Laboratory F., 6 and 7; (5). Professor BAKER.

Required: Theoretical and Applied Mechanics 2; General Engineering Drawing 1, 2.

6. GEODESY.—Geodesy is taught by lectures and assigned reading. II.; W.; 4 and 5; (1). Professor BAKER.

Required: Math. 3; General Engineering Drawing 1, 2; Civil Engineering 1, 3; Descriptive Astronomy 4.

10. SURVEYING.—For students in the courses of architecture, architectural engineering, electrical engineering, and mechanical engineering. Areas with chain and compass, U. S. public land surveys, and principles of reëstablishing corners; use of transit in finding distances, areas, and in laying out buildings; use of the level in finding profiles and contours. Baker’s Engineers’ Surveying Instruments. II.; M., Tu., W.; section A, 1 and 2; section B, 3 and 4; (3). Assistant Professor KETCHUM.

Required: Math. 4; General Engineering Drawing 1, 2; Physics 1, 3.

12. BRIDGE ANALYSES.—Instruction and practice are given in the computation of the stresses in the various forms of bridge trusses, by algebraic and graphical methods, under different conditions of loading. Johnson’s Modern Framed Structures. I.; daily; 2 and 3; (5). Professor BAKER.

Required: Theoretical and Applied Mechanics 2; Architecture 5.

13. BRIDGE DETAILS.—The student makes a tracing of a shop drawing of a bridge, and then makes a critical report upon each element of the design and computes the cost. Afterward a comparative study is made of the several forms of details employed by leading designers. This must be taken with course 12 above during the first semester, and with course 14 below during the second semester.

Required: Civil Eng’g 12 and free-hand sketches, with dimensions, showing full details of a bridge measured by the student.
14. **Bridge Design.**—Each student designs a bridge, proportioning the sections and working out the details, and afterward makes a complete set of drawings. *II.*; *daily; 1 and 2; (5). Professor Baker.

*Required:* Civil Engineering 12, 13.

14a. **Bridge Design.** Course 14 above three times a week for municipal and sanitary engineering students. *II.; M. W., F.; 1 and 2; (3).*

15. **Tunneling.**—This subject is given by lectures and assigned reading. Students are required to make written reports upon the methods employed in particular tunnels. Some time is given to practice in boring wells, dredging, quarrying, and sub-aqueous blasting. *II.; W.; 4 and 5; (1).* Professor Baker.

*Required:* Math. 1, 3, 6; General Engineering Drawing 1, 2; Mechanical Engineering 1, 16, 17; Chemistry 1; Physics 1, 3.

16. **Engineering Contracts and Specifications.**—A study is made of the fundamental principles of the law of contract, and of examples of the general and technical clauses of various kinds used in engineering specifications. *Johnson's Engineering Contracts and Specifications. II.; M., Tu.; 3; (2).* Professor Baker.

*Required:* Civil Engineering 5, 12, 13; Municipal and Sanitary Engineering 2, 3.

17. **Railroad Structures.**—Instruction is given by lectures and references to standard authorities. Current practice is studied by the examination of existing structures and by means of a collection of the standard drawings of leading railroads. *II.; Th., F., 3 and 4; (2).* Assistant Professor Ketchum.

*Required:* Civil Engineering 4.

**Courses for Graduates**

All primary unless otherwise stated.

101. Location and Construction.

102. Railway Track and Structures, and their Maintenance.

103. Yards and Terminals.

104. Motive Power and Rolling Stock.

105. Signal Engineering.

106. Railway Operation and Management.

107. Bridge Designing.

108. Cantilever and Swing Bridges.

110. Metallic Building Construction.
DAIRY HUSBANDRY

1. **Milk.**—The character and composition of normal milk; standardizing milk and cream, proper precautions to prevent contamination, and the care and uses of milk. Practice with the Babcock test and the lactometer, supplemented by lectures and reference readings and by laboratory experiments upon contamination of milk. *I.; daily; 1 and 2; (5).* Mr. Fraser and Mr. Erf.

2. **Management of Dairy Farms.**—The establishment of the dairy herd, and the economical production of milk as depending upon the systems of feeding, the efficiency of the individual cow, and the housing and general care of the herd. *II.; first half; daily; 3; (2½).* Mr. Fraser.

3. **Cream Separation.**—A critical study of different systems of cream separation as to rapidity and efficiency, and the comparison of different machines, especially centrifugal separators; designed to be taken in conjunction with course 4. *II.; three days per week, arrange time; (2½).* Mr. Erf.

4. **Butter Making.**—Ripening the cream; churning, working, packing and scoring of butter; designed to be taken in conjunction with course 3. *II.; three days per week, arrange time; (2½).* Mr. Erf.

5. **Factory Management.**—Coöperative and company creameries and cheese factories; planning, construction, equipment, and operation of plants, including care of engines and boilers. *II.; second half; 3; (2½).* Mr. Erf.
6. **CITY MILK SUPPLY.**—Sources of milk, together with methods of shipping, handling, and distributing, and of securing a healthful product for large cities. *II.; second half; daily; 1 and 2; (2½).* Mr. Fraser.

*Required:* Regular admission.

7. **DAIRY BACTERIOLOGY.**—Bacteria in their relations to milk and its products. *II.; daily; 4 and 5; (5).* Mr. Fraser.

*Required:* Regular admission; Botany 5.

8. **CHEESE MAKING.**—Practice in making, curing, and judging cheddar and fancy cheese. *I.; 5 hours, 3 days per week; (5).* Mr. Erf.

9. **INVESTIGATION AND THESIS.**—Subject arranged with instructor. *(5 to 10).* Mr. Fraser and Mr. Erf.

**DRAWING, GENERAL ENGINEERING**

1a. **ELEMENTS OF DRAFTING.**—Geometrical constructions; orthographic, isometric, and cabinet projections. *Tracy's Mechanical Drawing. I., first half; daily; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (2½).* Assistant Professor Phillips and Mr. Kable.

1b. **DESCRIPTIVE GEOMETRY.**—Problems relating to the point, line, and plane. *Church's Descriptive Geometry. I., second half; daily; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (2½).* Assistant Professor Phillips and Mr. Kable.

*Required:* Drawing, General Engineering 1a.

2a. **DESCRIPTIVE GEOMETRY.**—The generation and classification of lines and surfaces; planes tangent to surfaces of single and double curvature; intersections, developments, and revolutions. *Church's Descriptive Geometry. II.; Tu., Th.; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (2).* Assistant Professor Phillips and Mr. Kable.

*Required:* Drawing, General Engineering 1a, 1b.

2b. **LETTERING.**—Plain and ornamental alphabets; free-hand and mechanical lettering; titles and title pages. *Jacoby's Plain Lettering. II., first half; M., W., F.; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (1½).* Assistant Professor Phillips and Mr. Kable.

*Required:* Drawing, General Engineering 1a.

2c. **SKETCHING AND PRACTICAL DRAWING.**—Architectural sketch plans and details; bridge details; machines, machine parts, and...
mechanisms; working drawings; drawings finished in color and right line shading. Lectures on drafting instruments and materials; computing instruments; office methods, and reproduction processes. Lectures and notes. II., second half; M., W., F.; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (1½). Assistant Professor Phillips and Mr. Kable.

Required: Drawing, General Engineering 1a, 1b.

3. Advanced Descriptive Geometry.—For students making a specialty of mathematics. Curved lines of the higher orders; higher single curved, warped, and double curved surfaces. Church's Descriptive Geometry, with references to Warren's General Problems from the Orthographic Projections of Descriptive Geometry. II.; M., W., F.; arrange for two periods; (3). Assistant Professor Phillips.

Required: Drawing, General Engineering 1a, 1b, 2a.

ECONOMICS

1. Introductory Course.—This is a beginners' course, consisting of two parts:
   a. Principles of Economics.—This course is introductory to the more advanced courses. Attention is confined to the underlying principles of the science. I.; M., W., F.; 5; (3). Dr. Hammond.
   b. English Economic History.—This course, which begins with the Norman Conquest, traces the economic development of a great commercial and industrial nation to the present time. Special attention is directed to the evolution of modern industrial institutions. An attempt is made to show how the principles discussed in course a have worked themselves out in the course of this industrial development. The course should accompany course a and is required of all students in the political science group. I.; Tu., Th.; 5; (2). Dr. Hammond.

Required: At least 30 hours of University work.

2. Principles of Economics.—This is a course in general economics offered primarily to junior and senior students of high standing in the colleges of agriculture, engineering, science, and law. Emphasis is laid on the practical side of economic questions. II.; M., W.; 7; (2). Professor Kinley.

Required: Two years of University work.

3. Money and Banking.—In this course a study of the history and functions of money is followed by a study of the monetary and banking history of the United States and of such topics as the theory
of prices, credit, government paper, the money market, etc.  II.; M., W., F.; 5; (3).  Professor Kinley.

Required:  Economics 1 or 2.

4. Financial History of the United States.—This course deals with the growth and management of the national debt, and with the industrial expansion of the country.  A brief outline of the main points in this history, from the adoption of the constitution, is first given.  Attention is then directed to a detailed study of particular periods.  For the year 1900-1901 the subjects for detailed study are the period from the beginning of the War of 1812 to 1850, and that from the close of the Civil War to the present time.  I. and II.; Tu., Th.; 5; (2).  Professor Kinley.

Required:  Economics 1 or 2.

5. Public Finance.—This course consists of a critical comparative study of financial theories and methods.  Special attention is directed to American conditions.  Public expenditure and its relation to the various sources of revenue; taxation, its theory, incidence, and methods; public debts, financial administration, and budgetary legislation, are among the subjects discussed.  II.; M., W., F.; 4; (3).  Dr. Hammond.

Required:  Economics 1 or 2.

6. Taxation.—This course gives a more detailed treatment of the problems of American taxation than is possible in course 5.  The reports of state tax commissioners are reviewed and discussed, and an attempt is made to develop a system of taxation that shall meet the requirements of our state and local governments.  Special attention is given to the present system of taxation in Illinois.  This course is suitable for graduates, though it is also open to undergraduates who have had, or are taking, course 5.  II.; Th.; 2; (2).  Dr. Hammond.

7. The Tariff Problem.—This course deals briefly with the theories of international trade and with the history of the tariffs of the U. S. and their influence upon the social and industrial development of the country.  Lectures, assigned readings, and discussions.  I.; W., F.; 2; (2).  Dr. Hammond.

Required:  Economics 1 or 2.

8. The Transportation Problem.—This course deals with the problems of transportation, especially by railways, in their economic and social aspects.  A comparative study is made of the development, management, and regulation of railways in Europe and the United States.  Special attention is given to the problem of rate-making.
Lectures, reports, and discussions. II.; M., W.; 7; (2). Dr. Hammond.

 Required: Economics 1 or 2.

9. Agricultural Problems.—This course includes a discussion of the economic principles underlying the science of agriculture, a short history of the development of agriculture in this country, and a study of the problems and tendencies of American farming. Lectures and quizzes. I.; W., F.; 2; (2). Dr. Hammond.

 Required: Economics 1 or 2. [Not given in 1900-1901.]

11. Statistics.—A short course recommended to all who intend to take the advanced courses in economics. It is of a practical character, and is intended to furnish a knowledge of the statistical method, its limitations and abuses, and to enable the student to use intelligently government reports, statistical publications, trade papers, etc. Lectures, reports, and discussions. II.; Tu., Th.; 3; (2). Dr. Hammond.

 Required: Economics 1a or 2.

12. The Labor Problem.—This course is a study of the labor movement and its social significance. Readings, lectures, and quizzes. I.; M., W., F.; 5; (3). Professor Kinley.

 Required: Economics 1 or 2. [Not given in 1900-1901.]

13. Theories of Production and Consumption.—This course is a study of the conditions of social prosperity as dependent on production and consumption. I.; Tu., Th.; 7; (2). Professor Kinley.

 Required: 10 hours in Economics. (Not given in 1900-1901.)

14. The Distribution of Wealth.—This course deals with the problem of distribution both in theory and practice. The facts of distribution of wealth and of income are first discussed, and attention is then turned to a comparison of theories of wages, interest and profits. An attempt is made to show the relation of the existing distributive process to social prosperity and progress. I. and II.; Tu., Th.; 7; (2). Professor Kinley.

 Required: Economics 1a and 1b, or 2 and 1b. The course is open to students of law who have had "Real Property" and "Contracts."

15. Problems of Pauperism and Crime.—This course begins with the history of poor relief in Europe and the United States. As full a discussion of the various methods of reform and prevention is given as the time will permit. II.; Tu., Th.; 2; (2). Dr. Hammond. (Not given in 1900-1901.)

17. Sociology.—An elementary presentation of social principles
and phenomena, and a brief discussion of some of the recent theories advanced to explain the growth and structure of society. \( I.; \ Tu., \ Th.; 2; (2) \). Dr. Hammond.

18. THE MONOPOLY PROBLEM.—This course is a more detailed study of a portion of the field of course 14. It discusses the economic aspects of monopoly, the limits of competition, combinations and "trusts," and the relation of monopoly to the public welfare. \( I.; M., W., F.; 5; (3) \). Professor Kinley.

Required: Economics 1 or 2.

19. ECONOMIC SEMINARY.—Advanced students will be formed into a seminary for investigation and for the study of current economic literature. Students who write their theses in economics must do so in connection with the seminary work. \( I. \) and \( II.; \) arrange time; \( (4 \) for the year). Professor Kinley and Dr. Hammond.

COURSES PRIMARILY FOR GRADUATES

(These courses are open to those students only who have had at least one full year's work in economics.)

101. THE THEORY OF VALUE.—This is an historical and critical study of theories of value.

102. THE HISTORY OF ECONOMIC THOUGHT.—In this course portions of the works of economic writers since the 16th century are read. Lectures are given tracing the course of economic thought in its relation to the prevalent philosophy.

ELECTRICAL ENGINEERING

1. ELECTRICAL ENGINEERING.—Lectures accompanied by laboratory practice (Electrical Engineering 21); for students in other courses of engineering and in architecture. Principles of electrical machinery, selection, installation, operation and testing, distribution and applications of electric power. \( II.; \ Lecture, Tu., Th., 2; Laboratory, arrange one period; (3) \). Professor Aldrich.

Required: Physics 1, 3; Mathematics 9.

2. DYNAMO-ELECTRIC MACHINERY.—Lectures on the principles of construction, operation, and characteristics of dynamo-electric machinery, with special reference to direct current types. \( I., \) last six weeks, and \( II., \) first nine weeks; \( M., W., F.; 1; (2\frac{1}{2}) \). Assistant Professor Browne.

Required: Electrical Engineering 3; Physics 4.

3. ELECTRICITY AND MAGNETISM.—A course of lectures and recitations on the elements of the mathematical theory of electricity and
ELECTRICAL ENGINEERING

magnetism. Special attention is given to establishing and illustrating by problems the laws and principles of fundamental importance to electrical engineers. *I., first twelve weeks; M., W., F.; 1; (2).* Associate Professor Esty.

**Required:** Physics 1, 3; Mathematics 9.

4. **TELEGRAPHY AND TELEPHONY.**—Lectures and recitations. Methods of telegraphy,—land and submarine,—the theory of the telephone, and telephone engineering. *II., second nine weeks; M., W., F.; 1; (1½).* Associate Professor Esty.

**Required:** Physics 4; Electrical Engineering 3.

5. **ALTERING CURRENTS AND ALTERNATING CURRENT TRANSFORMER.**—Lectures and recitations. A mathematical and graphical treatment of the principles of periodic currents, with the theory of the transformer and applications to practice. *I.; Tu., W., Th.; (3).* Associate Professor Esty.

**Required:** Physics 4; Electrical Engineering 3.

6. **ALTERING CURRENT MACHINERY.**—Lectures on the principles of construction, operation and characteristics of single-phase and poly-phase alternating current machinery and rotary converters. *I.; M., W., F.; 3; (3).* Assistant Professor Browne.

**Required:** Electrical Engineering 2 and 5.

7. **ELECTRICAL DISTRIBUTION.**—Lectures and practice. Methods and economics of distribution of electric energy for light and power, by direct and alternating currents; insurance rules and regulations; testing distributing circuits. *I., first nine weeks; M., F.; 2; (1).* Professor Aldrich.

**Required:** Electrical Engineering 2 and 3.

8. **ELECTRIC POWER TRANSMISSION.**—Lectures. The long distance transmission of power by electricity, from generating stations operated by steam and water power, for utilization in lighting, traction, mining, and manufacturing work; economics of project; construction, maintenance and protection of lines; comparison with other systems. *I., second nine weeks; M., F.; 2; (1).* Professor Aldrich.

**Required:** Electrical Engineering 5 and 7.

9. **ELECTRIC LIGHTING.**—Lectures and practice. Manufacture, care and use of arc and incandescent lamps; economics of installation, and operation of electric lighting systems by central and by substation supply; commercial photometry. *I., first nine weeks; Tu., Th.; 2; (1).* Professor Aldrich.

**Required:** Electrical Engineering 7 and 26.

10. **ELECTRIC TRACTION.**—Lectures and practice. Principles and
economics of construction, installation, electrical distribution, management, and testing of electric traction system; applications to surface and elevated electric roads and to mine haulage. I., second nine weeks; Tu., Th.; 2; (1). Professor Aldrich.

Required: Electrical Engineering 7.

11. Electric Light and Power Plants.—Lectures and practice. Principles and economics of location of site; selection, arrangement, and subdivision of generating units; installation, management, and testing of central and sub-stations for electric light, traction, mining, and manufacturing work. II.; M., F.; 2; (2). Professor Aldrich.

12. Electro-Metallurgy.—Lectures on the commercial application of electrolysis; refining metals; treatment of sewage; the electric furnace; electrotyping; electro-plating. II.; Tu., Th.; 1; (2). Assistant Professor Browne.

Required: Chemistry 1; Physics 4.

13. Seminary.—A weekly meeting of instructors and students is held in the department reading room for discussion of topics from the current journals of theoretical and applied electricity. Papers on any original work being done in the department are read and discussed. A card catalogue of references to the leading electrical journals is maintained by the cooperation of members of the seminary with the department. I.; Tu.; 6 and 7. II.; Tu.; 7 and 8; (1). Associate Professor Esty.

Required: Physics 4; Electrical Engineering 2, 3, 22, 31.

14. Alternating Currents.—Lectures on the theory and applications of alternating electric currents, and alternating current phenomena. Elective for undergraduates. II.; arrange time; (2). Associate Professor Esty.

Required: Electrical Engineering 5.

21. Electrical Engineering Laboratory.—Arranged for students in other courses of engineering and in architecture. Care, operation, inspection, and testing electrical machinery and distributing circuits. II.; arrange time; (1). Professor Aldrich and Assistant Professor Browne.

Required: Electrical Engineering 1 or 2.

22. Electrical Engineering Laboratory.—Experimental study of direct current dynamos, motors, and accessory apparatus; theory and care of instruments; reduction of observations; individual and
comparative tests; complete tests such as are made in the testing laboratories of representative manufacturing establishments. \textit{II.}; \textit{Th.}; 3, 4, and 5; (1). Professor ALDRICH and Assistant Professor BROWNE.

\textit{Required:} Electrical Engineering 2.

23. **ELECTRICAL ENGINEERING LABORATORY.**—Experimental study of alternating current instruments, dynamos, motors, and transformers; regulation, efficiency, temperature, and insulation tests. \textit{I.}, \textit{Tu.}, and \textit{II.}, \textit{M.}; 3, 4, and 5; (1). Professor ALDRICH and Assistant Professor BROWNE.

\textit{Required:} Electrical Engineering 2, 3, 4.

24. **ELECTRICAL ENGINEERING LABORATORY.**—Advanced direct and alternating current testing work; special problems for investigation; plant, line, and motor service testing. \textit{II.}; \textit{F.}; 3, 4, and 5; (1). Professor ALDRICH and Assistant Professor BROWNE.

\textit{Required:} Electrical Engineering 22 and 6.

25. **POLYPHASE TESTING.**—Advanced course for seniors in Group I., Electrical Engineering. A critical study and investigation of polyphase machinery and systems; individual and aggregate tests. Elective. \textit{I.}; \textit{Th.}; 3, 4, and 5; (1). Professor ALDRICH and Assistant Professor BROWNE.

\textit{Required:} Electrical Engineering 23.

26. **PHOTOMETRY.**—Laboratory work with descriptive lectures. Principles of photometry with candle power, life, and efficiency tests of incandescent and arc lamps. \textit{I.}; \textit{M.}; section \textit{A}, 4 and 5; section \textit{B}, 7 and 8; (1). Assistant Professor BROWNE.

\textit{Required:} Electrical Engineering 9.

31. **ELECTRICAL DESIGN.**—Design and drafting with supplementary lectures on the design, calculation, and construction of electromagnetic mechanisms, and dynamo-electric machines. This course is introductory to the fuller courses of the following year. \textit{II.}; \textit{Tu.}; 3, 4, and 5; (1). Associate Professor ESTY.

\textit{Required:} Electrical Engineering 2, 3; Physics 4.

32. **ELECTRICAL DESIGN.**—Design, drafting, lectures. A continuation of the preceding. Includes the design and construction of multi-polar generators and motors, alternating current generators, motors, and transformers. \textit{I.}; \textit{Th.}, 6, 7, and 8; \textit{II.}; \textit{Th.}, 3, 4, and 5; (1). Associate Professor ESTY.

\textit{Required:} Electrical Engineering 2, 6, 22, 31.

33. **ELECTRICAL DESIGN.**—Design and drafting. Supplements
Electrical Engineering II, and takes up the ensemble design of an electric light or power installation, including plans, specifications, and estimates. II.; W.; 3, 4, and 5; (1). Associate Professor Esty.

Required: Electrical Engineering 6, 8, 9, 10, 11.

COURSES FOR GRADUATES

Primary

102. Dynamo-Electric Machinery.
103. Alternating Current Machinery.
104. Electrical Transmission of Power.
105. Electric Light and Power Plants.
108. Electrical Engineering Research.
109. Electrical Design.

Secondary

111. Theory of Equations.
112. Theory of Determinants.
113. Least Squares.
114. Differential Equations.
115. Calculus of Variations.
116. Spherical Harmonics.
117. Potential Function.
118. Advanced Physical Measurements.
119. Mathematical Physics.
120. Mathematical Theory of Electricity and Magnetism.
121. Physical Chemistry.
122. Metallurgical Chemistry.
123. Electro-Chemistry.

ENGLISH LANGUAGE, AND LITERATURE

1. General Survey of English Literature.—I.; daily; section A, 2; section B, 4; section C, 7; II.; 8; (5). Miss Carson.

2. Prose Writers of the Eighteenth and Nineteenth Centuries.—II.; daily; section A, 2; section B, 7; (5). Miss Carson.

Required: English I.

3. Nineteenth Century Poetry.—I. and II.; M., W., F.; 3; (3). Associate Professor Jayne.

Required: English I.
4. Prose Writers of the Sixteenth and Seventeenth Centuries.—I. and II.; Tu., Th.; 3; (2). Professor Dodge.

Required: English 1 and 2. [The second semester may be taken without the first.]

4a. Non-Dramatic Poetry of the Sixteenth and Seventeenth Centuries.—I. and II.; Tu., Th.; 3; (2). Professor Dodge.

Required: English 1 and 2. [Not given in 1900-1901.]

5. Shakspere and History of the Drama.—Primarily for graduates. I. and II.; M., W., F.; 2; (3). Professor Dodge.

Required: English 1, 2, and either 3 or 4. [The second semester may be taken without the first.]

6. History of English Criticism.—Primarily for graduates. I. and II.; Tu., Th.; 4; (2). Professor Dodge.

Required: English 1, 2 and either 3 or 4.

7. Seminary: English Fiction.—Open only to senior and graduate students. I. and II.; Tu.; arrange time; (1). Associate Professor Jayne.

8. Old English (Anglo-Saxon) Grammar and Prose.—I. and II.; M., W., F.; arrange time; (3). Professor Dodge.

9. Early English.—I. and II.; Tu., Th.; arrange time; (2). Professor Dodge.

10. Old English Poetry.—I. and II.; M., W., F.; arrange time; (3). Professor Dodge.

Required: English 8 and 9.

11. Fourteenth and Fifteenth Century Literature.—I. and II.; Tu., Th.; arrange time; (2). Professor Dodge.

Required: English 8 and 9. [Not given in 1900-1901.]

12. History of the English Language.—I. and II.; W.; arrange time; (2). Professor Dodge.

Required: English 8 and 9. [Not given in 1900-1901.]

13. Icelandic.—I. and II.; daily; arrange time; (5). Professor Dodge.

Required: English 8 and 9, or German 1. [Not given in 1900-1901.]

14. Old English Legal Codes.—Special course for students of politics, economics, and history. As an introduction to the course, Old English Grammar is studied, so far as is necessary for a proper understanding of early phraseology. Primarily for graduates, but open to undergraduates having sufficient preparation. I. and II.; M., W.; arrange time; (2). Professor Dodge.
Required: One year of history, economics, sociology, or English Literature.

15. SEMINARY: METHODS OF ENGLISH TEACHING.—Open to senior and graduate students. I. and II.; W.; arrange time; (1). Professor Dodge and Associate Professor Jayne.

[The second semester may be taken without the first.]

16. HISTORY OF AMERICAN LITERATURE.—II.; M., W., and F.; arrange time; (3). Associate Professor Jayne.

17. HISTORY OF THE ENGLISH LANGUAGE.—Elementary course. I. and II.; Tu., Th.; arrange time; (2). Professor Dodge.

[The second semester may be taken without the first.]

FRENCH

1. ELEMENTARY COURSE.—This course embraces grammatical study, pronunciation, exercises in composition, and conversation. Reading of representative works of modern authors, such as Daudet, Labiche, Jules Verne, and others. I. and II.; daily; section A, 1; section B, 3; (5). Assistant Professor Piatt.

2. NINETEENTH CENTURY.—(1) The class will read works of Mérimée, George Sand, Balzac, Sandeau, Bourget, Hugo, and others. (2) Outlines of French literature. (3) Assigned readings and reports thereon. I. and II.; daily; 1; (5). Professor Fairfield.

Required: French 1 or 5.

3. SEVENTEENTH CENTURY.—(1) Readings from Molière, Corneille, Racine, Lafontaine, Boileau, de Sévigné, and others. (2) Study of French literature and civilization of the century. (3) Advanced composition. (4) Assigned reading. I. and II.; daily; 2; (5). Professor Fairfield.

Required: French 2.

4. EIGHTEENTH CENTURY.—(1) The course will consist of lectures in French, themes, and collateral reading. Reading of selected works of Voltaire, Montesquieu, Rousseau, Chénier, and Beaumar- chais. (2) Assigned readings. (3) Themes in French upon subjects connected with the course. I. and II.; M., W., F.; 3; (5). Professor Fairfield.

Required: French 3.

5. SCIENTIFIC AND TECHNICAL FRENCH.—Similar to course 1 for first semester. In the second semester the class takes up the study of scientific and technical French. For this purpose a weekly scientific periodical, La Nature, published at Paris, is taken by each mem-
ber, and made the basis of the class-room work. Particular attention is given to acquiring a technical vocabulary and to rapid reading. *I. and II.; daily; section A, 3; section B, 7; (5).* Assistant Professor Piatt.

**COURSE FOR GRADUATES**

101. **OLD FRENCH READINGS.**—Clédat, Les Auteurs Français du Moyen Age; Suchier, Aucassin et Nicolete; Gautier, La Chanson de Roland. Translation and comparison with the modern idiom. Study of the laws of phonetic changes. Lectures upon Old French philology. Professor Fairfield.

**GEOLOGY**

1. **GEOLOGY, MAJOR COURSE.**—This course begins in the second semester, following Mineralogy 1, and is continued through the first semester of the succeeding year (Geology 2). Either semester counts as a major study.

(a) Dynamic Geology. The instruction given under this head is intended to familiarize the student with the forces now at work upon and within the earth's crust, modeling its reliefs, producing changes in the structure and composition of its rock masses and making deposits of minerals and ores. A series of localities is studied in which great surface changes have recently taken place, with a view to ascertaining the character of the forces producing such changes, and the physical evidence of the action of like forces in the past. The subject is taught by lectures, and is abundantly illustrated by maps, models, charts, and views.

(b) Petrographic. This course is a continuation of Mineralogy 1 (b) (p. 241), and deals with fragmental rocks in substantially the same manner as that does with crystallines. [Continued under Mineralogy 2 (p. 242).]

(c) Historical Geology. The work on this subject is substantially an introduction to the history of geology as a science. Especial stress is laid on the development of the North American continent and the evolution of its geographic features.

(d) Paleontology. The scheme of instruction in this subject places before the student the classification adopted for those organic forms occurring as fossils, together with the succession of the various groups in the strata, with the cause, as far as known, for their appearance and disappearance. The student is required to familiarize
himself with selected groups of paleozoic fossils, abundant illus-
trations of which are placed in his hands. The subject is presented in
lectures and demonstrations, each group being considered in connec-
tion with its nearest living representative. [Continued under Paleon-
tology i, p. 247]. II.; daily; 1 and 2; (5). Professor Rolfe and
Mr. Hubbard.

Required: Mineralogy 1.

2. Major Course Continued.—Economic Geology. The course
is devoted to a study of the uses man may make of geologic materials,
the conditions under which these materials occur, and the qualities
which render them valuable. The instruction is given by text and
readings from the various state and government reports, transactions
of societies, and monographs in which these subjects are treated,
as well as by demonstrations with materials from the collections of
the University. I.; daily; 6 and 7; (5). Professor Rolfe and Mr.
Hubbard.

Required: Geology 1 or 3.

Note.—In dynamic and historical geology Dana’s manual is used
as a reference book. Petrography is pursued by means of a labora-
tory guide adapted from Rosenbusch, Zirkel, Roth, Teall, and others.
In economic geology the manuals of Kemp and Tarr are used as
texts. In paleontology Nicholson, Bernard, and Zittel are used for
descriptions of the larger groups, Miller for general distribution,
and the various state surveys for species.

3. General Geology, Minor Course.—This course includes a
selection of such geological facts and theories as should be known
to every educated person, with such discussion of them as the
time will permit. The subjects treated are fully illustrated. One
hour each day is devoted to laboratory work, and this time is about
equally divided between the study of minerals, rocks, and fossils.

The instruction is by texts and lectures, using Le Conte’s Ele-
ments of Geology as the basis for the class-room work, and a spe-
cially prepared guide for the laboratory. II.; daily; 6 and 7; (5).
Professor Rolfe and Mr. Hubbard.

4. Investigations and Thesis.—For students who select a geo-
logical, paleontological, mineralogical, or geographical subject for a
thesis, guidance and facilities are offered for individual investiga-
tions in the field and laboratory. I. and II.; daily; 3 and 4; (5).
Professor Rolfe.

Required: Geology 1, Mineralogy 2, Paleontology 1 or Physiog-
raphy 1.
Note.—Geology 1a, b, c, d may be taken, instead of the minor, by those who have had Mineralogy 1.

The applications of geology to geography are considered in Physiography 1 (p. 253).

COURSES FOR GRADUATES

101. Paleontology.—A critical and comparative study of the fossils found in the rocks of Illinois.

102. Economic Geology.—The effects which variations in the chemical composition and physical constitution of inorganic substances used in the arts have on the qualities of the manufactured product, and should have on methods of manufacture. A critical examination of the tests now employed in determining the qualities of building stones.

GERMAN

[For Courses A and B, see p. 288.]

1. Elementary Course.—Thomas's Practical German Grammar; Hewett's German Reader, or other easy narrative prose, with exercises in composition. I.; daily; section A, 1; section B, 2; section C, 3; section D, 4; section E, 7; (5). Assistant Professor Meyer and Dr. Brooks.

2. Engineering Course.—For students in the College of Engineering. General descriptive prose, followed by the translation of articles dealing with physics or the history of architecture. II.; daily; 2; (5). Dr. Brooks.

Required: German I.

3. Narrative Prose and Modern Dialogue.—For students in the College of Literature and Arts, and in the College of Science. Hewett's German Reader continued, or other works of a similar character. Bernhardt's Prose Composition. II.; daily; section A, 2; section B, 8; (5). Assistant Professor Meyer and Dr. Brooks.

Required: German I.

4. Descriptive and Historical Prose.—Selections from standard prose writers of the present century, with grammatical review and drill; also exercises in reading at sight. Bernhardt's Prose Composition completed. I.; daily; section A, 1; section B, 3; section C,
6. (5). Professor Rhoades, Assistant Professor Meyer, and Dr. Brooks.

Required: German 1 and 3, or two years of high school work.

5. German Classics.—One of Schiller's later dramas and one of Goethe's or Lessing's are translated with work in prose composition. II.; daily; section A, 3; section B, 6; section C, 7; (5). Professor Rhoades and Assistant Professor Meyer.

Required: German 4.

6. Scientific Reading.—Required course for students in the College of Science and in the College of Engineering who offer two years of German for entrance. The course is given in two sections; section A, for students specializing in physical science and for engineering students, reads works in physico-mathematical science; section B, for students of natural science and of chemistry, reads works in biological and chemical science, with reports on assigned collateral reading. II.; daily; section A, 1; section B, 4; (5). Dr. Brooks.

Required: German 4.

7. Lessing or Schiller, Selections.—The authors will be studied in alternate years; in 1900-1901, Schiller's Wallenstein, designated as 7b; in 1901-1902, Lessing's Emilia Galotti and Nathan der Weise, designated as 7a. Students may, if they desire, elect and receive credits for both options. I.; M., W., F.; 7; (3). Professor Rhoades.

Required: German 5 or 6, or three years of high school work.

8. Selections from Lessing or Schiller.—The work is designed to supplement course 7, but with the approval of the instructor may be taken separately. The same arrangement will be followed as in course 7, the work being designated as 8a and 8b. I.; Tu., Th.; 7; (2). Professor Rhoades.

Required: German 5.

9. Goethe.—Translation and discussion of selected work. In 1900-1901, study of Faust, designated as 9b; in 1901-1902, selections from his lyrics, prose works, and classical dramas, designated as 9a. Students may elect and receive credit for both options. I.; M., W., F.; 8; (3). Professor Rhoades.

Required: German 7.

10. Lectures on Goethe.—The work is designed to supplement and accompany course 9. I.; Tu., Th.; 8; (2). Professor Rhoades.

11. History of German Literature.—Lectures and assigned collateral reading. II.; Tu., Th.; 7; (2). Professor Rhoades.

Required: German 7.
12. Heine and the Romantic Poets.—Translations and assigned readings. \(II.; M., W., F.; 7; (3)\). Professor Rhoades. 

*Required:* German 5.

13. Teachers' Seminary.—Study of methods, text-books, and practical teaching. This course will be required in order to obtain a specific recommendation to teach German. \(II.; Tu., Th.; 8; (2)\). Professor Rhoades.

*Required:* German 7 and 12, also 11 unless taken in connection with this course.

**GREEK**

1. Historical Prose.—Selections from Herodotus, Thucydides, and Xenophon. Greek prose composition once a week. \(I.; daily; 4; (5)\). Professor Moss.

2. Historical Prose.—Selections from Herodotus, Thucydides, and Xenophon. Greek prose composition once a week. \(II.; daily; 4; (5)\). Professor Moss.

*Required:* Greek 1.

3. Xenophon's Memorabilia.—Selections from Plato. \(I.; daily; 1; (5)\). Professor Moss.

*Required:* Greek 2.

4. Greek Tragedy.—\(II.; daily; 1; (5)\). Professor Moss.

*Required:* Greek 3.

5. Homer.—The Odyssey. \(I.; M., W., F.; 3; (3)\). Professor Moss.

*Required:* Greek 4.

6. Homer.—The Odyssey. \(II.; M., W., F.; 2; (3)\). Professor Moss.

*Required:* Greek 4.

7. Isocrates.—The Panegyricus. Demosthenes. The private orations. \(I.; Tu., Th.; 2; (2)\). Professor Moss.

*Required:* Greek 4.

8. Lucian.—Select dialogues. \(II.; Tu., Th.; 2; (2)\). Professor Moss.

*Required:* Greek 4.

**HISTORY**

[It is recommended that the elementary courses be taken in the following order: History 5, 6, 1, 2. For students who take but one course in History, History 1 is recommended.]

1. Medieval and Modern European History.—Elementary
220  GENERAL DESCRIPTION OF COURSES

introductory course.  I.; M., W., F.; section A, 4; section B, 7; II.;
section A, 4; section B, 8; (3).  Dr. SCHOOLCRAFT.

2.  Historical Introduction to Contemporary Politics.—The political history of the nineteenth century. The first semester is devoted to the political history of the United States, and the second to that of Europe. The work of either semester may be taken separately. This course, taken with Public Law and Administration 1, constitutes, during the first semester, a course in American history and government; and in the second semester a course in the governments and recent political history of Europe.  I. or II.; Tu., Th.; 4; (2).  Professor GREENE.

3.  American History.—The origin and growth of the nation from the beginning of English colonization in America to the close of the reconstruction period.  I. or II.; daily; 1; (5).  Professor GREENE.

Required:  History 1 or 2; or, for juniors and seniors in the Colleges of Engineering, Science, and Agriculture, any course in economics or public law and administration.

4.  English Constitutional History.—In this study of the growth of the English constitution, some attention is also given to the origins of legal institutions. The course is therefore adapted to the needs of students who expect to follow the profession of law.  I. and II.; M., W., F.; 3; (3).  Dr. SCHOOLCRAFT.

Required:  History 1 or an equivalent.

5.  The History of Greece.—This course and History 6 will be useful to students who expect to teach the classics or ancient history in secondary schools.  I.; Tu., Th., F.; 5; (3).  Dr. SCHOOLCRAFT.

6.  The History of Rome.—The aim of this course, which furnishes a suitable introduction to History 1, is to give a general survey of the Roman world before the appearance of the Germans, rather than to trace the economic and political history of the city.  II.; M., W., F.; 6; (3).  Dr. SCHOOLCRAFT.

7.  The Revolutionary Era in Europe, 1763-1815.—I.; M., W., F.; 4; (3).  Professor Greene.

Required:  History 1.

8.  The Colonial Interests and Colonial Policies of the European Powers.—Special attention will be given to the eighteenth and nineteenth centuries.  II.; Tu., Th.; 6; (3).  Professor Greene.

Required:  History 1.

9.  Mediaeval History.—Advanced course. The conflict of the Papacy and the Empire.  I.; M., W., F.; 2; (3).  Dr. SCHOOLCRAFT.

Required:  History 1.  [May be omitted in 1900-1901.]
ENGLAND UNDER THE STUART KINGS.—Puritanism and the Church of England. The conflict between king and parliament. II.; M., W., F.; 2; (3). Dr. Schoolcraft.

[Courses for Graduates]

101. AMERICAN HISTORY.—Special studies in the development of the West. I. and II.; M.; 8; (3). Professor Greene.

102. ENGLISH HISTORY.—Studies in the period of the Puritan Revolution. I. and II.; arrange time; (2). Dr. Schoolcraft. [This course may be omitted in 1900-1901.]

103. SEMINARY IN AMERICAN HISTORY.—Training in historical research. I. and II., arrange time; (for undergraduate students, 2; for graduates, 2 or more, at the option of the student and the instruction). Professor Greene.

Courses 101 to 103 are primarily for graduates, but they may also be taken by seniors of high standing who have previously taken two or more courses in history.

HORTICULTURE

1. PRINCIPLES OF FRUIT-GROWING.—This course, which is designed for all students in the College of Agriculture, deals with the fundamental principles of fruit culture. It embraces a study of the planting and care of fruit areas. Lectures, recitations, reference readings, and practical exercises. I.; daily; 2; (5). Assistant Professor Blair and Mr. Lloyd.

2. SMALL FRUIT CULTURE.—A study of the strawberry, raspberry, blackberry, dewberry, currant, gooseberry, cranberry, and juneberry; each studied with reference to the following: Botanical matter, history, importance and extent of cultivation, soil, location, propagation, planting, pruning and training, fertilizers, insect enemies and diseases, spraying, varieties, harvesting, marketing, profits. II.; Tu., Th.; 2; (2). Mr. Lloyd.

Required: Horticulture 1.

3. VEGETABLE GARDENING.—Kitchen and market gardening and vegetable forcing; embracing a study of all the common vegetables. II.; M., W., F.; 2; (3). Mr. Lloyd.

Required: Horticulture 1.

4. PLANT HOUSES.—The construction and management of conservatories and other plant houses. Text-book and laboratory work. I., first half; daily; 5; (2½). Mr. Lloyd.

5. PLANT PROPAGATION.—A study of the methods of securing
and perpetuating desirable varieties of plants,—grafting, budding, layering, making cuttings, pollination, seedage, etc. Text-book and laboratory work. 

**Required:** Horticulture 4.

6. **NURSERY METHODS.**—A study of the various methods of nursery management and their relation to horticultural practices in general. Lectures, reference readings, and laboratory work. 

**Required:** Horticulture 5.

7. **SPRAYING.**—The theory and practice of spraying plants, including a study of materials and methods employed in the combating of insects and fungous diseases. Text-books and practical demonstrations. 

**Required:** Horticulture 1.

8. **ORCHARDING.**—A comprehensive study of pomaceous fruits: apple, pear, quince; drupaceous or stone fruits: plum, cherry, peach, nectarine, apricot. Each fruit studied with reference to the points enumerated under 2, above. Lectures, text-books, and laboratory work. 

**Required:** Regular admission; Horticulture 1.

9. **FORESTRY.**—This course embraces a study of forest trees and their natural uses, their distribution, and their artificial production. The relations of forest and climate are studied, and the general topics of forestry legislation and economy are discussed. 

**Required:** Botany 2.

10. **LANDSCAPE GARDENING.**—Ornamental and landscape gardening, with special reference to the beautifying of home surroundings. Lectures illustrated by means of lantern slides and charts. 

**Required:** Regular admission; Botany 2.

11. **ECONOMIC BOTANY.**—Useful plants and plant products. Lectures and assigned readings. 

**Required:** Regular admission; two years of University work.

12. **EVOLUTION OF CULTIVATED PLANTS.**—Comprising a study of organic evolution and the modification of plants by domestication. 

**Required:** Regular admission; two years of University work.

13. **VITICULTURE.**—A comprehensive study of the grape and its products. 

**Required:** Horticulture 1 and 8.
14. **Nut Culture.**—The cultivation and management of nut bearing trees for commercial purposes. *I., second half; daily; 5; (2½).* Assistant Professor Blair.

*Required:* Regular admission; Horticulture 1 and 8.

15. **Floriculture.**—The study and management of conservatory and house plants. *II.; daily; 5; (5).* Assistant Professor Blair.

*Required:* Regular admission; Horticulture 4 and 5; Botany 2.

16. **General Horticulture.**—For students not registered in the College of Agriculture. A course covering the general principles and processes of fruit-growing, gardening, floriculture, and ornamental planting. Suited to needs of individual students so far as practicable. *I.; daily; 3; (5).* Assistant Professor Blair and Mr. Lloyd.

17. **Commercial Horticulture.**—A course giving practical training for those students intending to follow horticulture as a business. Work in houses, orchards, and gardens—suited to ability and requirements of each student. *I. and II.; arrange hours; (5-20).* Mr. Lloyd.

18. **Experimental Horticulture.**—A course for those intending to engage in professional horticulture or experiment station work. For advanced students. *I.; daily; 1; (5).* Assistant Professor Blair.

*Required:* Regular admission; twenty hours work in horticulture.

19. **Special Investigation and Thesis Work.**—Required of candidates for graduation. *II.; daily; arrange time; (5).* Professor Burrill and Assistant Professor Blair.

**ITALIAN**

1. **Grammar and Reading.**—Grandgent’s Italian Grammar, reading of modern authors; Dante’s Divina Commedia, outlines of Italian literature. *I. and II.; M., W., F.; arrange time; (5).* Professor Fairfield.

**LATIN**

1. **Cicero and Pliny.**—De Amicitia and De Senectute; composition based on the text; selections from Pliny’s Letters. Roman life in Pliny’s time. This course is required of students who offer but nine credits in Latin for admission. *I. and II.; daily; 2; (5 each semester).* Mr. Campbell.
2. Livy.—Selections from the XXI. and XXII. books. Latin composition based on the text. The main object of this course is to secure facility in composition and translation. I.; daily; 1; (5). Professor Barton.

3. Terence.—Phormio and selections from other plays. Scenic antiquities. Outlines of Roman literature. II.; daily; 1; (5). Professor Barton.

Required: Latin 2.

4. Horace and Catullus.—The odes of Horace and the lyrics of Catullus. Their art as a contribution to the world's best literature. I.; Tu., W., Th., F.; 6; (5). Professor Barton. This course will be given in alternate years with course 5.

5. Horace and Tacitus.—The Satires and Epistles of Horace. Especial reference to the private life of the Romans in the time of Augustus. The Germania of Tacitus in connection with Cæsar's account of the customs of the Germans. I.; Tu., W., Th., Fr.; 6; (5); Professor Barton.

Required: Latin 2, 3. [Not given in 1900-1901.]

6. Tacitus and Plautus.—The Agricola of Tacitus considered both from the standpoint of biography and as an introduction to the style of the author. Plautus, two plays. Comedy as an exponent of social life. II.; Tu., W., Th., F.; 6; (5). Professor Barton.

Required: Latin 2, 3.

7. The Roman Historians.—Readings from Cæsar, Livy, Sallust, Tacitus, and Suetonius. The course is partly grammatical and partly devoted to a study of the differences of style and method of treating historical themes. I.; M., Tu., W., Th.; 3; (5). Professor Barton.

Required: Latin 2, 3.

8. Roman Satire and Epigram.—Selections from Juvenal and Martial. Society in the first century. I.; M. Tu., W., Th.; 3; (5). Professor Barton. [Not given in 1900 and 1901.]

Required: Latin 2, 3.

9. Teachers' Course.—A study of the aims and essentials of preparatory Latin teaching, methods of presentation, and conditions which surround the study of Latin in the high schools of the state. Students will, for a portion of the time, do the work of a preparatory class and at intervals take charge of the recitation. II.; M., Tu., W., Th.; 3; (5). Professor Barton.
10. **Advanced Latin Prose Composition.**—Intended especially for students fitting themselves for teaching. *I.*; *M., W., F.*; 7; (3). Professor Barton.

**LAW**

1. **Contracts.**—Text-book, *Keener’s Cases on Contracts.* *I.*; *M., W., Th.*; (3). *II.*; *M., W., F.*; 3; (3). Professor Pickett.
2. **Torts.**—Text-book, *Ames and Smith’s Cases on Torts.* *I.*; *Tu., Th., F.*; 4; (3). *II.*; *M., W., F.*; 2; (3). Professor Drew.
3. **Real Property.**—Text-book, *Gray’s Cases on Property.* *I.*; *F.*; 3; *W.*; 4; (2). *II.*; *Tu.*; 3; *W.*; 4; (2). Professor Drew.
15. **Bills and Notes.**—Text-book, *Huffcutt’s Negotiable Instruments.* *II.*; *M., W., F.*; 2; (3). Professor Hughes.
17. **Corporations.**—Text-book, *Smith’s Cases on Private Corporations.* *I.*; *M., W.*; 3; (2). *II.*; *W., F.*; 1; (2). Professor Hughes.

26. **MOOT COURT.**—I.; F.; 2-5 p. m. II.; F.; 2-5 p. m. Mr. Justice Harker.

---

**LIBRARY SCIENCE**

1. **ELEMENTARY LIBRARY ECONOMY.**—Instruction begins with the selection of books and the placing of an order, and follows the regular library routine.

   The work of the order department is taught by lectures and practice. American, English, French, and German trade bibliography is introduced. Instruction in the accession department is according to Dewey's Library School Rules. Lectures are given upon duplicates, exchanges, gifts, importing, copyright, and allied topics.

   The Dewey decimal classification is taught by classifying books. In the shelf department Dewey's Library School Rules is used and supplemented with lectures. Sample shelf-lists are made with both sheets and cards.

   Cataloging is taught according to Dewey's Library School Rules and Cutter's Rules for a Dictionary Catalogue. After each lecture students are required to catalog independently a number of books. The class is taught to modify the rules to suit different types of libraries. Lectures are given on forms of card catalogs and mechanical accessories. Library handwriting is practiced in connection with all the work.
Instruction is given on loan systems and on binding and repair work. A comparative study of Chicago libraries is made in the second semester, when the students have become familiar with library methods.

Single lectures are given on library associations, library schools, library commissions, traveling libraries, home libraries, library economy publications, government and service, library legislation, regulations for readers, library architecture, libraries and schools, and other general subjects, to acquaint students with current general library topics. I.; daily; 2; (10). II.; daily; 2; (4). Professor Sharp and Miss Mann.

2. Elementary Reference.—Lectures are given on reference books considered in groups, such as indexes, dictionaries, encyclopaedias, atlases, hand-books of history, hand-books of general information, quotations, statistics, etc. Reference lists are prepared for special classes and for literary societies, and the students have practical work in the reference department of the library. I. and II.; Tu.; 1; (2 each semester). Assistant Professor Straight.

3. Selection of Books.—Study is based upon the Publisher's Weekly. Each student checks desired books each week, examines them, if possible, and studies reviews in order to make a final choice of five or ten books each month. These books are carefully reviewed in class with regard to author, subject, edition, and series. Especially interesting publications, and current library topics, are called to the attention of the students at this time. This course continues through two years. I. and II.; F.; 1; (1 each semester). Assistant Professor Straight.

4. Elementary Apprentice Work.—The purpose of this work is to familiarize the students with the minor work of a library and to acquaint them with the books in the University library. Each student is given practical work in the mechanical preparation of books for the shelves, and in the copying of minor library records assigned as practice in library handwriting.

The care of the books in the stacks including the reading of shelves is assigned to the students, who are thus brought in contact with the books. Upon the completion of a class study, practical work upon this study is assigned to such students as are capable of doing independent work. The work is all done under the direction of an instructor. I.; daily; 3; (2). II.; daily; 2; (8). Miss Mann.

Required: Library I, 2.

5. Advanced Library Economy.—In a comparative study of classification are discussed the systems of Dewey, Cutter, Edwards,
Fletcher, Perkins, Smith, and Schwartz. A comparative study of cataloging considers the rules of British Museum, Jewett, Library Association of the United Kingdom, Bodleian Library, American Library Association, Wheatley, Perkins, Cutter, and Dewey. Students revise junior cataloging as a review, and catalog new books for the library. Problems are given in buying supplies, in organizing and reorganizing libraries, in preparing printed finding-lists, in forming rules and regulations, and in devising loan systems. The class discusses questions affecting the founding and government of libraries, library legislation, library architecture, library administration, and current problems in public and college library work. I. and II.; M., W.; 3; (3 each semester). Professor Sharp and Miss Mann.

Required: Library 4.

6. Bibliography.—Lectures on subject bibliography are given by professors at the University. Students are given many practical problems. I. and II.; Tu.; 3; (I each semester). Professor Sharp.

7. History of Libraries.—Libraries are studied by types and by countries. Special attention is given to libraries in the United States, their reports being used as text-books. I.; W.; 1; (2). Assistant Professor Straight.

8. Advanced Reference.—The course takes up public documents, transactions of societies, advanced reference books, and indexing. I.; Th.; 1; (2); and II., first half; Th.; 1; (2). Assistant Professor Straight.

Required: Library 1, 2.

9. Book-Making.—Lectures on the history of printing, printers' marks, book-plates, and the history and art of binding. II., second half; W.; 1; (2). Assistant Professor Straight.

10. Advanced Apprentice Work.—This consists of independent technical work in the University library, and of public library work in connection with the libraries of Champaign and Urbana. I. and II.; daily; 4; (5 each semester). Miss Mann.

Required: Library 4.

11. Thesis.—Each student is required to prepare a thesis for graduation. This must be on some library topic, and must represent original research. An original bibliography, instead of a thesis, may be presented upon the approval of the director. I.; arrange time; (1). II.; arrange time; (3). Professor Sharp.

Required: Library 1-10.

12. General Reference.—This course is offered to all students of the University who wish to become familiar with the ordinary
reference books. It will comprise lectures on the catalog, classification, the reference-room, the reading-room, and groups of books, such as indexes, dictionaries, encyclopaedias, atlases, handbooks of general information, handbooks of history, statistics, quotations, etc. I.; arrange time; (i). Professor Sharp.

MATHEMATICS

1. Advanced Algebra.—For students in courses requiring spherical trigonometry. This course presupposes a thorough knowledge of elementary algebra through simultaneous quadratics and proportion. Students, who for any reason have not had this elementary work recently, would find it to their advantage to review it thoroughly before commencing this course. The work will cover the following topics: Progressions, indeterminate equations, binomial theorems for fractional and negative exponents, undetermined coefficients, decompositions of fractions, theory of limits, convergency and divergency of series, reversion of series, summation of series, logarithms, continued fractions, permutations and combinations, probability, and the loci of equations. I.; Tu., Th.; section A, 2; section B, 4; (2). Mr. Coar.

2. Advanced Algebra.—For students in courses not requiring spherical trigonometry, to be taken with course 4. This course will cover all the work given in course 1, and in addition will include a short introduction to the general theory of equations, with applications to the solution of numerical equations. I.; M., W., F.; section A, 1; section B, 2; section C, 3; section D, 4; section E, 6; (3). Associate Professor Townsend, Mr. Milne, Mr. Coar, Mr. Short.

3. Plane and Spherical Trigonometry.—This course covers the same ground in plane trigonometry as course 4. In addition to the work outlined there, about two-fifths of the term will be given to developing the general principles and applications of spherical trigonometry. I.; M., W., F.; section A, 2; section B, 4; (3). Mr. Coar.

Required: Solid and Spherical Geometry.

4. Plane Trigonometry.—The following topics will be taken up, viz.: Measurements of angles, trigonometric functions and their fundamental relations, functions of the sum and the difference of two angles, functions of twice an angle and of half an angle, the construction and use of logarithmic tables, solution of trigonometric equations, the relations between the sides of a triangle and the functions of its angles, the solution of triangles, Demoïyre's theorem and trigonometric series. It is intended that this course shall be
taken with course 2 in advanced algebra. I.; Tu., Th.; section A, 1; section B, 2; section C, 3; section D, 4; section E, 6; (2). Associate Professor Townsend, Mr. Milne, Mr. Coar, and Mr. Short.

6. Analytical Geometry.—The aim is to acquaint the student with analytical methods of investigation and to familiarize him with some of the most recent developments in synthetic geometry; to make him more skillful in the use of algebraic processes, especially as a means of demonstrating geometric properties of loci. Subjects considered are the elementary theory of the point and right line in a plane; use of abbreviated notation; elementary theory of the conic sections, their equations and properties developed analytically; poles and polars; synthetic geometry of the circle, and the discussion of the general equation of the second degree, and of some higher plane curves. The course will also include a discussion of the following subjects: Coördinate systems for a point in space, the locus in space of an equation of the first and second degree, planes and straight lines, quadratic surfaces. Tanner and Allen’s Analytic Geometry. II.; daily; section A, 1; section B, 3; section C, 6; (5). Associate Professor Townsend, Mr. Milne, Mr. Coar, and Mr. Short.

Required: Mathematics 2, 4 or 1, 3.

7. Differential Calculus.—Variables and functions; limits and infinitesimals; differentials and derivatives; differentiation of explicit functions, implicit functions, and functions of several variables; derivatives of higher orders; successive derivatives, developments in series; maxima and minima of functions; indeterminate forms; plane curves, tangents, and normals; asymptotes, singular points, and curve tracing; theory of envelopes, of curvature, of evolutes, and of involutes. Byerly’s Differential Calculus. I.; daily; section A, 1; section B, 2; section C, 4; (5). Professor Shattuck and Mr. Short.

Required: Mathematics 6.

9. Integral Calculus.—Elementary forms of integrations; integrals immediately reducible to the elementary forms; integration by rational transformations; integration of irrational algebraic differentials; integration of transcendent functions; definite integrals; successive integration; differentiation under the sign of integration; integration by means of differentiating known integrals; double integrals; triple and multiple integrals; product of two definite integrals.

Rectification and quadrature; the parabola, the ellipse, the cycloid, the Archimedean spiral, the logarithmic spiral, the limniscate,
the cycloid, quadrature of surfaces of revolution and of surfaces in
general; cubature of volumes; the sphere, the pyramid, the ellipsoid,
any solid of revolution, and of volumes in general. Byerly’s Integral
Calculus. II.; daily; section A, 1; section B, 2; section C, 4; (5).
Professor Shattuck and Mr. Short.

Required: Mathematics 7.

10. THEORY OF EQUATIONS.—The development of the general
properties of equations; relations of the roots and the coefficients of
an equation, with applications to symmetric functions; transformation
of equations; solution of reciprocal and binomial equations; algebraic
solution of cubics and biquadratics; properties of derived functions;
the limits and separation of the roots of equations; the solution of
numerical equations of the nth degree. Burnside and Panton’s
Theory of Equations. I.; M., W., F.; 1; (3). Associate Professor
Townsend and Mr. Coar.

Required: Mathematics 2, 4 or 1, 3.

11. THEORY OF DETERMINANTS.—The origin and notation of de-
terminants, properties of determinants, determinant minors, multipli-
cation of determinants, determinants of compound systems, determin-
ants of special forms—Jacobians, Hessians, Wronskians—with appli-
cations to algebra, including linear transformations, and to analytic
geometry. Hanus’s Theory of Determinants, supplemented by lec-
tures. I.; Tu., Th.; 1; (2). Associate Professor Townsend and
Mr. Coar.

Required: Mathematics 7, 10.

12. THEORY OF INVARIANTS.—The course will cover the general
development of the theory of invariants, both from the geometric and
from the algebraic side. Applications of invariants will be made to
systems of conics and to higher plane curves. Lectures with col-
lateral reading. Associate Professor Townsend.

Required: Mathematics 11.

13. THEORY OF FUNCTIONS.—By way of introduction, consider-
able attention will be given to the geometric representation of the
complex variable, including Argand’s diagram, conformal representa-
tion, and harmonic ratios, and bilinear transformation. This will be
followed by the development of the theory of infinite series, algebraic
and transcendental functions, integration of uniform functions, Rie-
mann’s surfaces, introduction to elliptic functions, etc. Durege’s
Theory of Functions and Collateral Reading. I. and II.; M., W., F.;
3; (3). Associate Professor Townsend and Mr. Coar.

Required: Mathematics 7, 9, 10.
14. Method of Least Squares.—The object of this course is to present the fundamental principles of the subject in a manner so plain as to render them intelligible and useful to students of astronomy and engineering. The following subjects will be studied: Law of probability and error, adjustment of observations, precision of observations, independent and conditioned observations, etc. Merriman's Least Squares. I.; M., W., F.; 4; (1½). Mr. Brenke.

Required: Mathematics 9.

15. Seminary and Thesis.—I. and II.; Tu., Th.; 3; (2). Associate Professor Townsend and Mr. Coar.

16. Differential Equations.—This subject is designed for students in the courses of engineering and of mathematics and astronomy. It will embrace the following topics: General linear equations with constant coefficients, special forms of differential equations of higher order, integration in series, etc. Johnson's Differential Equations. II.; M., W., F.; 4; (3). Professor Shattuck and Professor Myers.

Required: Mathematics 9.

17. Analytical Geometry of Space.—A general review will be given of the position of the plane and the right line in space and the more general properties of surfaces of the second degree. To this will be added the classification and special properties of quadrics, and a brief introduction to the theory of surfaces in general. Chas. Smith's Solid Geometry. II.; M., W., F.; 1; (3). Associate Professor Townsend and Mr. Coar.

Required: Mathematics 9.

18. Higher Plane Curves.—This course is designed to cover the general theory of algebraic curves, together with the application of the theory of invariants to higher plane curves. Special study will be made of curves of the third and fourth order. Lectures with collateral reading. Associate Professor Townsend.

Required: Mathematics 12.

20. Calculus of Variations.—This course has for its aim merely to acquaint the student with those elements of the science which are most needed in the study of the higher subjects of mathematical astronomy and physics. Carll's Calculus of Variations. I.; M., W., F.; 4; (1½). Professor Shattuck.

Required: Mathematics 11, 16.

21. Spherical Harmonics.—In this course, a thorough study is made of so much of this subject as is of interest to an astronomer. It is introduced by a short course of lectures and study of certain
trigonometric series. Fourier's Theorem for developing any function of a variable in a series proceeding in sines and cosines of multiples of the variable is derived and the limitations of its validity investigated. This is followed by the study of Lagrange's, Laplace's and Lamé's functions and their applications to astronomical and physical problems. Byerly's Fourier's Series and Spherical Harmonics. I.; M., W., F.; 7; (3). Professor Myers.

Required: Mathematics 11, 14, 16.

22. Potential Function.—The potential function is defined and its properties derived and discussed. The potential of various bodies, such as of a wire, a spherical shell, a sphere, ellipsoid of revolution, etc., is computed. Poisson's and Laplace's Equations are derived and discussed. Green's Propositions with kindred and similar subjects are handled. Pierce's Newtonian Potential Function.—II.; M., W., F.; 7; (3). Professor Myers.

Required: Mathematics 21.

23. Modern Geometry.—This course will include in general a consideration of homogeneous coördinates, duality, descriptive and metrical properties of curves, anharmonic ratios, homography, involution, projection theory of correspondence, etc. Scott's Modern Analytic Geometry. Associate Professor Townsend.

Required: Mathematics 8, 11.

24. Algebraic Surfaces.—In this course will be considered the application of homogeneous coördinates and the theory of invariants to geometry of three dimensions, and also the general theory of surfaces, together with the special properties of surfaces of the third and fourth order. Lectures with collateral reading. Associate Professor Townsend.

Required: Mathematics 17, 18.

25. Partial Differential Equations.—This course may be taken either simultaneously with, or subsequently to, Math. 16. It deals with the integration and determination of the integration constants of such partial differential equations as arise in the study of such subjects as the flow of heat, the vibration of strings, plates, etc., and electricity. II.; Tu., Th.; 5; (2). Professor Shattuck and Professor Myers.

Required: Mathematics 9.

26. Statistical Adjustments.—This course is intended for students whose work requires the handling of a mass of data, statistical or observed, which is vitiated by the presence of accidental errors, in such way as to elicit the content of truth on sound mathematical principles. It is thought the course will be particularly useful to
234 GENERAL DESCRIPTION OF COURSES

students of economics and of the observational sciences. I.; Tu., Th.; 6; (2). Professor Myers. [Not given in 1900-1901.]

Required: Mathematics 7.

MECHANICAL ENGINEERING

1. Shop Practice.—In the shops the work, as far as possible, is carried along the same lines as in our leading commercial shops. The exercises are, in general, chosen from parts of machines under construction, and carefully graded to the skill of the student. Beginning with the care and use of the tools with which he is to work, the student is carried through the various operations of machine-shop practice. Following is an outline of the work, that of the two semesters being subject to transposition.

(a) First Semester, Wood Shop.—Primary exercises relating to the care and use of tools and a series of exercises preparatory to pattern making in joint work and turning.

Pattern and core box making with special reference to molding.

Second Semester (b) Foundry and (c) Forge Shop.—One-half of this semester is devoted to instruction in the management of the cupola and molding, including the making of green and dry sand cores. One-half of the semester is devoted to instruction in forging and welding iron and steel. Special attention is given to tempering of lathe and planer tools, also to case-hardening and annealing. I. and II.; daily; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (3½). Mr. Curtiss, Mr. Wilson, and Mr. Jones.

2. Shop Practice.—First Semester. Instruction in chipping, filing, and elementary machine work. Lectures.

Second Semester.—Instruction in the various operations of lathe, screw machine, planer, drill press, shaper, grinding machine, milling machine, boring mill, as well as fitting and bench work. Lectures. I. and II.; daily; 6, 7, and 8 (divides time with M. E. 4); (2½). Mr. Clark.

3. Power Measurements.—This is the beginning of the work in the mechanical engineering laboratory, and is intended for students taking the mechanical engineering course. A study is made of the use and construction of the steam engine indicator. The measurement of power developed by the steam engine under different conditions is made a prominent part of the work. The method of applying friction brakes and measuring transmitted power is also taken up. I. and II.; Tu., Th., 6, 7, and 8; S., 1, 2, 3; (2). Mr. Oliver.

Required: Mechanical Engineering 1, 2; Math. 9.
4. **Elements of Machine Design.**—The basis of this work is found in *Klein's Elements of Machine Design*. A series of plates 26x40 inches is constructed, covering a wide range of machine parts. By means of a large number of practical examples, sufficient drill is obtained in using rational and empirical formulas to enable the student to make the calculations required when designing various parts of machines. Theoretical and practical problems relating to gearing are taken up and worked out in detail. Instruction in blue printing and duplicating is included in the course. For description see Chem. 22c, p. 198. *Kent's Mechanical Engineer's Pocket-book; also Unwin's Machine Design. I. and II.; daily; 6, 7, and 8 (divides time with M.E. 2); (2½)*. Mr. Randall.

**Required:** General Engineering Drawing 1, 2.

5. **Mechanism.**—This course includes a study of plane motion, following the methods of Reuleaux, and a study of the nature and equivalence of mechanisms. Determination of instantaneous centers and centrodes. Determination of velocities of important points of familiar mechanisms. Construction of acceleration diagrams. The transmission of motion in mechanisms by gearing, cams, links, etc. Trains of mechanism, analysis of difficult mechanisms. Particular attention is paid to problems relating to motions of gearing, steam-engine mechanisms, parallel motions of indicators, governors, link motions, valve gears, and indicator riggings. I.; M., W., F.; 3 and 4; (3). Mr. Randall.

6. **Heat Engines.**—The application of the theory of thermodynamics to gas and gasoline engines and hot air engines. A study of the modern forms of heat engines. Lectures and assigned readings. I.; Tu., Th.; 1; (2). Professor Breckenridge.

**Required:** Theoretical and Applied Mechanics 1; Physics 1, 3; Mechanical Engineering 7.

7. **Thermodynamics.**—The fundamental principles underlying the transformation of heat into work, more especially as exemplified in the steam engine, are carefully studied. Considerable attention is paid to the solution of numerous examples, such as will arise in steam, air, or gas engineering. Drill is given in the rapid and accurate use of standard steam tables. I.; M., W., F.; 1; (3). Assistant Professor Goodenough.

**Required:** Math. 9; Theoretical and Applied Mechanics 1; Physics 1, 3.

8. **Mechanics of Machinery.**—This is a study of the theoretical principles involved in the construction of hoisting apparatus,
pumping engines, air compressors, fans, blowers, machinery for transmitting power, locomotives, pile drivers, and other machinery of this character. II.; Tu., W., Th.; 1; (3). Assistant Professor Good

ENOUGH.

Required: Theoretical and Applied Mechanics 1, 2, 3; Mechanical Engineering 5, 7, 14.

9. ADVANCED DESIGNING.—The work in this course comes under two heads.

Original Design: This part of the course is intended more especially to develop and train the student's inventive ability. The work begins with simple problems and extends to more difficult designs as the student progresses. The machines are to be designed for accomplishing a certain prescribed work. Often but a single piece is handed the student, and a machine is required which will produce a given number of these pieces per hour.

Advanced Design: This includes primarily the design of heavy machinery, such as punches, shears, presses, cranes, derricks, etc. Machinery subjected to heavy and variable stresses. The design of attachments to existing machines, or the complete design of some machine that can be built in the shops, is often a part of this work.

A large amount of study of existing machines is required. The student is taught to consult the standard works on designing, such as Unwin, Reuleaux, Klein, Bach's Maschinenelemente, and Richards. I.; Tu., Th.; 6, 7, 8; (2). II.; Tu., W., Th.; 6, 7, 8; (3). Assistant Professor GoodENOUGH.

Required: Theoretical and Applied Mechanics 1, 2, 3; Mechanical Engineering 1 to 8, and 14.

10. ESTIMATES, SPECIFICATIONS, AND SUPERINTENDENCE.—Calculations and estimates are made as to the cost of machinery, power plants, boilers, chimneys, systems of piping, engines and their foundations, different methods of power transmission.

Also forms of contracts and specifications are studied. II.; Tu., Th.; 2, 3; (1). Professor BRECKENRIDGE.

Required: Theoretical and Applied Mechanics 1, 2, 3; Mechanical Engineering 1 to 6, 9, 12.

12. ADVANCED MECHANICAL ENGINEERING LABORATORY.—This work is a continuation of the work begun in the junior year. Experiments are made with engines, pumps, motors, injectors, and boilers to determine under what conditions they may be expected to give a maximum efficiency. Tests of plants in the vicinity are made, of which carefully prepared reports are always required. The dyna-
momometer car and the railway test car described under the equipment of the department gives unexcelled opportunities for experimental railway engineering. Advanced constructive work in the shops is assigned to groups of students, in order to impress upon them the intimate relation existing between the designing room and the shop. Carpenter's Experimental Engineering. I.; M., F.; arrange time; (4). II.; F.; 1; (1). Professor Breckenridge, Mr. Schmidt, and Mr. Oliver.

Required: Theoretical and Applied Mechanics 1, 2, 3; Mechanical Engineering 1 to 7, 14.

13. Mechanical Engineering Laboratory.—This is a laboratory course for students in other departments of the Engineering College. The student is taught to apply the indicator to different engines and to make the usual calculations of horse power and steam consumption as given by the diagrams. Correct forms of reducing motions are explained. The reading of indicator diagrams and valve setting are also taught. Indicator Practice and Steam Engine Economy—F. F. Hemenway. II.; Th., F.; 6, 7, 8; (2). Mr. Oliver.

Required: Mechanical Engineering 1, 2; Math. 7, 9.

14. High Speed Steam Engine and Valve Gears.—In this course the relations between piston speed, expansion, and quiet running are carefully studied. The student is given the problem of designing an engine that will develop a prescribed maximum and minimum horse power and run smoothly at all loads within its range. Each part of a complete engine is designed, and detailed drawings made and traced, so that each member of the class may have a complete set of blue prints.

The application of graphical diagrams as an aid in the study and design of valves for steam distribution in the engine cylinder is carefully brought out. Determination of the dimensions of steam passages, single valve gears, double valve gears, equalization of steam distribution, application of diagrams to existing types of engines. A critical study of the shaft governor. Klein's High Speed Steam Engine. I.; Tu., W., Th.; 2, 3, 4; (3). Assistant Professor Goodenough.

Required: Mechanical Engineering 1 to 7, 16, 17; Theoretical and Applied Mechanics 1, 2.

16. Steam Engines.—A study of the details of steam engines. Elementary principles of transformation of heat into work. Laws of expansion of steam. The mechanics of the steam engine. Valves and valve gears. The indicator diagram, condensers, steam jackets,
super-heaters, and compound engines. *The Steam Engine, Holmes*. I.; Tu., Th.; section A, 1; section B, 2; (2). Mr. Oliver.

**Required:** Physics 1, 3; Mathematics 9.

17. **Steam Boilers.**—Materials used in the construction of boilers. Proportions and strength of riveted joints. Incrustation, explosions, combustion, safety appliances, feed apparatus, boiler trials. *Peabody and Miller's Steam Boilers*. II.; M.; section A, 1; section B, 2; (1). Mr. Randall.

**Required:** Physics 1, 3; Mathematics 9.

18. **Graphical Statics of Mechanism.**—Graphical determination of the forces acting at different points in machines used for hoisting, crushing, punching, and transmitting motion, taking into account the resistances offered to motion by frictional resistances. Effect of sliding, rolling, and journal friction, chain friction, tooth friction, stiffness of ropes and belts. Graphical determination of efficiencies. *Graphical Statics of Mechanism, Herrman-Smith*. II.; W.; 2, 3, 4; (1). Assistant Professor Goodenough.

**Required:** Theoretical and Applied Mechanics 1, 2; Mechanical Engineering 5.

19. **Seminary.**—Work supplementary to other studies of the senior year. Presentation of papers on assigned subjects. Contributed papers on current topics. Discussion and criticisms on new inventions. I.; W.; 6 and 7. II.; M.; 6 and 7; (1). Professor Breckenridge.

20. **Shop Practice for Special Students.**—This course is open to those entering as special students, as defined elsewhere under “Admission.” The work will be arranged after consultation. The work done does not count for a credit for graduation in any of the technical courses. *Arrange time.* Mr. Clark.

21. **Forge Shop Practice.**—This course is designed for students taking the course in Agriculture. The work covers instruction in forging, such as will be of use to the practical farmer. The course may be started at the beginning or middle of either semester; section A, 1 and 2; section B, 3 and 4; section C, 6 and 7; (2). Mr. Jones.

**Courses for Graduates**

**Primary**

103. Mill Engineering.
104. Steam Engineering.
105. Experimental Engineering.
106. Thermodynamics.
107. Pneumatics.
108. Hydraulic Machinery.
109. Mechanical Technology.
110. Translation of Technical Engineering Work.
111. Heat Engines and Gas Engineering.
112. Locomotive Engineering.
113. Mechanical Refrigeration.

Secondary

120. Any primary offered in the College of Engineering. Primary subjects may be taken as secondary in any course for the master's degree in the College of Engineering.

121. Indexing and Classification of Engineering Literature.

MECHANICS, THEORETICAL AND APPLIED

I. **Analytical Mechanics.**—The mechanics of engineering, rather than that of astronomy and physics, is here considered. In addition to fixing the fundamental concepts and demonstrating the general principles of equilibrium and motion, application of principles and methods is made to numerous and varied engineering problems in such a way that the student must discriminate in the use of data and in the statement of conditions. As mathematical processes and forms express most readily and quickly the rules and methods for the solution of such problems, such training is given with special care. This subject requires a thorough working knowledge of the mathematics preceding it in the course. The methods of the calculus are used whenever preferable.

Outline of the subject: Nature and measure of force; composition and resolution of forces; moments; conditions of equilibrium; resultant of systems of forces; center of gravity; moment of inertia; rectilinear and curvilinear motion, and the relation between such motion and the constraining and accelerating forces; dynamics of a rigid body; momentum and impact; work, energy, and power; mechanical advantage. *Bowser's Analytical Mechanics. I., first 14 weeks; daily; section A, 1; section B, 2; (4).* Professor Talbot.

Required: Mathematics 9.

2a, b. **Resistance of Materials.**—In the treatment of this subject it is the aim to give the student a thorough training in the elementary principles of the mechanics of materials, to follow with
such experiments and investigations in the materials laboratory as tend to verify the experimental laws, and to add such problems in ordinary engineering practice as will train the student in the use of his knowledge. Attention is also given to the quality and requirements for structural materials.

Outline of the subject: Elasticity of materials; stresses and strains; experimental laws; working strength for different materials; resistance of pipes and riveted joints; bending and resisting moment, shear, and elastic curve of cantilever, simple, restrained, and continuous beams; column formulas; torsion and shafts; maximum internal stresses in beams; fatigue of metals; working strength for repeated stresses; resilience; reliability of the common theory of flexure, as shown by actual experiment; design and strength of rolled and built beams and columns; specifications for materials and methods of testing. *Merriman's Mechanics of Materials.* I., last four weeks; daily; section A, 1; section B, 2. II., first 7 weeks; Tu., W., Th., F.; section A, 1; section B, 2; arrange for one laboratory period of two hours each week; (3). Professor Talbot.

**Required:** Math. 9; Theoretical and Applied Mechanics 1.

3. **HYDRAULICS.**—In hydraulics the instruction is by text-book and laboratory work. The laws of the pressure and the flow of water and its utilization as motive power are considered. Experimental work in the hydraulic laboratory gives training in the observation and measurement of pressure, velocity, and flow, and in the determination of experimental coefficients.

The subject covers the following: Weight and pressure of water; head; center of pressure; velocity and discharge through orifices, weirs, tubes, nozzles, pipes, conduits, canals, and rivers; measurement of pressure velocity, and discharge; meters and measurements; motors, turbines, and water wheels; water power and transmission of power. *Merriman's Hydraulics.* II., last 11 weeks; Tu., W., Th., F.; section A, 1; section B, 2; arrange for one laboratory period of three hours each week; (3). Professor Talbot.

**Required:** Mathematics 9; Theoretical and Applied Mechanics 2.

4. **APPLIED MECHANICS.**—To be taken instead of Analytical Mechanics. The course of study and topics studied will be nearly identical. *Wright's Mechanics.* I.; M., Tu., W., F.; 2; (4). Assistant Professor McLane.

**Required:** Mathematics 6.

5. **STRENGTH OF MATERIALS.**—To be taken instead of Resistance of Materials. The course of study will be nearly the same, though
somewhat simplified. *Merriman's Mechanics of Materials. II.; Tu., F., 4; M., Th., 6; arrange for ten laboratory periods of two hours each; (4). Assistant Professor McLane.*

### COURSES FOR GRADUATES

1. **Analytical Mechanics.**
2. **Resistance of Materials.**
3. **Hydraulics and Hydraulic Engineering.**
4. **Laboratory of Applied Mechanics.**

### MILITARY SCIENCE

1. **INFANTRY TACTICS.**—For all male students. School of soldier; bayonet exercise; school of company, close and extended order. *I.; (1). Professor Clark.*

2. **DRILL PRACTICE.**—Company and battalion in close and extended order; school of the cannoneer and of the battery dismounted; target practice. Freshman and sophomore years. *I. and II.; (1). Professor Clark.*

3. **RECITATIONS AND PRACTICE FOR OFFICERS AND NON-COMMISSIONED OFFICERS.**—*Sophomore year:* School of the battalion close and extended order; ceremonies; review and inspection; military signaling; guard, outpost, and picket duty. *Junior year:* Military administration; reports and returns; theory of firearms and target practice; organization of armies; field fortifications; art of war. This course is obligatory upon officers and non-commissioned officers, and open to others. Recitations one hour a week; drill two hours a week. *Professor Clark.*

### MINERALOGY

1. **ELEMENTS OF MINERALOGY.**—(a) The first term's work is a general introduction to the subject. Instruction includes lectures and laboratory practice. In the lectures, which occur on specified days (2 or 3 each week), such subjects as follow are discussed: Genesis of minerals; conditions favoring their deposition; origin of the massive and crystalline forms; relationships of minerals and their classification; the physical properties of minerals, as color, luster, hardness, gravity, streak, etc., with the conditions which may cause these properties to vary; and the elements of crystallography, including a study of the typical whole, half, and quarter forms of each system, and their identification when in combination.
In the laboratory the student is first made acquainted with the simplest trustworthy methods for proving the presence or absence of the acids and bases. He is then required to determine a large number of species by their physical and chemical properties only.

(b) Petrography of Crystalline Rocks: The instruction under this topic is given by lectures and laboratory work. The subjects included are the classification of rocks, the methods used in their determination, the conditions governing the formation of each species, the decompositions to which they are liable, and the products of these decompositions. Each student is supplied with a set of blowpipe tools and reagents, and a series of hand specimens covering all the common species of rocks. The course is continued under Geology 1b. 1; daily; 1 and 2; (5). Professor Rolfe and Mr. Hubbard.

Required: Chemistry 1.

2. ADVANCED MINERALOGY.—(a) Crystallographic Mineralogy. During the first part of the semester a mere detailed study of the forms of crystals and their combinations is made. The student is required to identify many species of minerals by measuring their angles with the contact or reflecting goniometer, and calculating their crystallographic constants.

(b) Optical Mineralogy. About eleven weeks are devoted to the microscopic determination of rock forming minerals. II.; daily; 3 and 4; (5). Professor Rolfe and Mr. Hubbard.

Required: Mineralogy 1.

MUNICIPAL AND SANITARY ENGINEERING

1. ROAD ENGINEERING.—The value and importance of road improvement in country highways and the best means of securing it are considered, together with the principles and details of construction of earth, gravel, and macadam roads. In city streets, the methods of construction, cost, durability, and desirability of the various kinds of pavement, and the questions of grades, cross-sections, methods of assessment of cost, and methods of maintenance and cleaning are treated. Byrne's Highway Construction. Lectures and Reading. II.; W.; 3; (1). Professor Baker.

Required: Math. 4; General Engineering Drawing 1, 2; Civil Engineering 1, 2, 3, 4.

2. WATER SUPPLY ENGINEERING.—This subject is intended to cover the principal features of the construction of water works, including the tests and standards of purity of potable water; the choice of source of supply; the designing of the distribution system,
pumps and pumping machinery, reservoirs, and stand-pipes. *Lectures; Folwell's Water Supply Engineering. I.; M., Tu., W., Th.; 4; arrange for drafting, 12 periods, M., 6, 7, and 8; (4). Professor Talbot.*

*Required:* Theoretical and Applied Mechanics 1, 3; Chemistry 1; Mechanical Engineering 16.

3. **Sewerage.**—The design and methods of construction of sewerage systems of cities, including the following: Sanitary necessity of sewerage; water carriage systems, both separate and combined; surveys and general plans; hydraulics of sewers; relation of rainfall to storm water flow, and determination of size and capacity of sewers; house sewage and its removal; form, size, design, and construction of sewers and sewer appurtenances; modern methods of sewage disposal; estimates and specifications. *Lectures; Folwell's Sewerage. II.; M., W., F.; 3; arrange for drafting, 10 periods, M., 3, 4, and 5; (3). Professor Talbot.*

*Required:* Theoretical and Applied Mechanics 1, 3; Chemistry 1.

5a. **Bacteriology.**—For students in Municipal Engineering. This course includes the identification and classification of bacteria, and of allied organisms, their relations to health and to disease, the methods of separation and cultivation, and the methods of air and water analysis. The laboratory is furnished with sterilizers, culture ovens, microscopes, etc., and students have abundant opportunity to do practical work. This course follows civil engineering 4a. *I., last 7 weeks; daily; 6 and 7; (2). Professor Burrill.*

6. **Water Purification, Sewage Disposal, and General Sanitation.**—This work includes the consideration of impurities in water supplies and the study of the methods and processes of their removal; the modern methods of sewage disposal by filtration, chemical precipitation, irrigation, etc., with a study of representative purification plants; garbage collection and disposal; sanitary restrictions and regulations and general sanitation. Lectures and seminary work. *II.; daily 4; (5). Professor Talbot.*

*Required:* Municipal and Sanitary Engineering 2, 3, 5a; Chemistry 1, 3a.

**COURSES FOR GRADUATES**

**Water Supply Engineering**

101. Tanks, Stand-Pipes, and Reservoirs.

102. Sources and Requirements of Water Supply for a City and Removal of Impurities.
103. Water Works Management and Economics.
104. Pumps and Pumping.
105. General Water Works Construction.
106. Biological and Chemical Examination of Potable Water.

Sewerage
111. Sewage Purification.
112. Sewage Disposal Works.
113. General Sewerage Design and Construction.
114. City Sanitation.
115. Description of Sewerage Systems.

Road Engineering
118. Economic Aspect of Good Roads and Pavements.

Miscellaneous Subjects
121. Critical Description of Engineering Construction.
122. Translation of Technical Engineering Work from French or German.
123. Any Primary in Civil Engineering.
125. Any Primary in Mathematics, Mechanical Engineering, or Electrical Engineering—Secondary.
126. Indexing of Municipal and Sanitary Engineering Literature in Engineering Periodicals.

MUSIC

Course 1 will be counted for credit toward the regular degree for students in the College of Literature and Arts, provided they are at the same time enrolled in the School of Music. Courses 7 and 8 are counted for credit for all students who take them.

1. History of Music.—Lectures on the development of music from its beginning among the Greeks to the present day, including the rise of dramatic music, the origin and progress of the oratorio, the evolution and development of instrumental forms, and studies in the lives of the composers. Assigned collateral readings. I. and II.; arrange time; (3). Mr. Wylie.

2. Theory of Music.—a. A course in harmony, two hours a week, in class, through three semesters. Emery's Harmony with additional exercises. Weitzman's Theory of Music. (13 in all.)
b. A course in counterpoint, two hours a week in class through one semester. *Richter's Counterpoint.* (3.)

c. A course in fugue, two hours a week in class through one semester. *Richter's Fugue.* (3.)

d. A course in musical analysis which may be taken at the same time with the studies in counterpoint and fugue. The second, third, and fourth parts of this course are open only to advanced students showing special aptitude. (3.) Mr. Wylie.

3. Course for the Piano.—(a) Preparatory. This course is equivalent to three years' work. It includes formation and position of fingers, hands, wrists, and arms, properties of touch, principles of technique, thorough drill in scale and arpeggio playing, and exercises in accent, rhythm, and expression. Music used: Herz, Scales and Exercises; Loeschhorn, Op. 65, 66; Lemoine, Op. 37; Heller, Op. 45; Bertini, Op. 29, 32; Czerny, Op. 299, Bks. 1, 2; Bach's Little Preludes; also sonatinas and easier sonatas and compositions by Clementi, Kuhlau, Haydn, Mozart, Mendelssohn, Merkel, Dussek, Diabelli, Grieg, Bargiel, and others. Miss Fox.

(b) Collegiate. First year. Studies in development of technique: Czerny, Op. 299, Bks. 3, 4; Czerny, Octave Studies; Cramer, Etudes; Jensen, Etudes; Bach, Two-Voice Inventions and French Suites; sonatas of Haydn and Mozart; easier Sonatas of Beethoven; Songs Without Words, Mendelssohn; compositions (smaller works) of Beethoven, Chopin, Schubert, Raff, Grieg, Chaminade, Moszkowski, and others. (10 in all.) Professor Jones and Miss Fox.

Second Year. Daily technique; Czerny, Op. 740; Bach, Three-Voice Inventions and English suites; sonatas and other compositions of Scarlatti, Beethoven, Schubert, Schumann, Mendelssohn, Weber, Raff, Rubinstein, Saint Saens, Godard, MacDowell, and others. (13 in all.) Professor Jones and Miss Fox.

Third Year. Selections: Clementi, Gradus ad Parnassum; Moscheles, Op. 70; Kullak, Seven-Octave Studies, Bk. 2; Bach, Well-Tempered Clavichord; sonatas and concertos by Mendelssohn, Weber, Beethoven, Hummel, Brahms, etc.; selections from works of Bach, Chopin, Schubert, Schumann, Brassin, Rubinstein, Liszt, Moszkowski, Scharwenka, and other modern composers. (17 in all.) Professor Jones.

Fourth Year. Selections: Octave Studies; Clementi, Gradus, continued; Bach, Well-Tempered Clavichord, continued; Chopin, Etudes; Henselt, Etudes; Rubinstein, Etudes; sonatas by Beethoven, and concertos and other compositions by the great masters, classic
and romantic, both of the older and the more modern schools. (17 in all.) Professor Jones.

4. a and b. Course for the Organ.—Similar preparatory and collegiate courses for the organ will be offered for any one caring to make this the principal instrument. Professor Jones.

(b) Collegiate. First Year: Voice production, Randegger's Singing continued. All the Fifty Conçone Studies. Songs of Mendelssohn, Schubert, and those of good modern composers. (10 in all.)

Second Year: Voice production. Viardot-Garcia's Hour of Study. Book I for technical work. Twenty-five and Fifteen Conçone Studies for soprano and tenor and the Forty Conçone for alto and bass. Songs of German, French, and English composers, and simple selections from operas and oratorios. (13 in all.)

Third Year: Voice production. Viardot-Garcia's Hour of Study, Book II. Bordigni's Thirty-six Studies for soprano or tenor, its equivalent, Sieber or Bordese for alto or bass. Selections from oratorios and from French, German, and Italian operas. Songs of considerable difficulty by German, English, French, and Italian composers. (17 in all.)

Fourth Year: Voice production. The Twenty-four Panofira Studies. Lütgen's Operavocalisien, Book II. Italian, French, German, and English songs of all standard composers. Solos and concerted work from the modern as well as the standard operas and oratorios. (17 in all.) Miss Fernie.

(b) Collegiate. First Year: Etudes by Kreutzer, Mazas, Fiorillo, etc. Concertos by Viotti, Rode, Kreutzer, DeBeriot. Sonatas by Mozart, Beethoven, Handel, Gade. (10 in all.)

Second Year: Etudes by Rode, Gavinies and Campagnoli. Concertos by Spohr, Bruch, Vieuxtemps, Molique, etc. Sonatas by Beethoven and Grieg. (13 in all.)

Third Year: Caprices by Paganini. Concertos by Bruch, Mendelssohn, Saint Saens, Joachim. Ensemble work. (17 in all.)
PEDAGOGY

Fourth Year: Bach sonatas. Concertos by Beethoven, Bruch, Brahms, Tschaikowsky, Dvorak, Saint Saens. Ensemble work. (17 in all.) Mr. Wylie.

7. University Orchestra. Two hours' rehearsal once a week throughout the year. (2.) Mr. Wylie.

8. University Choral Society. One hour rehearsal once a week throughout the year. (1.) Miss Fernie.

PALEONTOLOGY

1. Advanced Paleontology.—The work outlined under geology I d (p. 215) can do little more than introduce the general subject. To those who desire a better acquaintance with paleontology a course of one or two semesters is offered.

This course includes: (a) Discussion of the biological relations to fossil forms along the lines indicated in Williams' Geological Biology; (b) a discussion of the principles of classification as applied to fossils, together with the characteristics which distinguish the larger groups, using Nicholson, Bernard, and Zittel as guides; (c) a study of the distribution and variations of the genera and species of one or more of the important groups as illustrated by the collections of the University, using the various state reports and Miller's Handbook as aids. Ten hours per week. A major in botany and zoology would aid the student greatly in this work, but neither is required. See under mineralogy and geology. I. and II.; daily; 3 and 4; (5 each semester). Professor Rolfe and Mr. Hubbard.

Required: Geology I.

PEDAGOGY

Required: Two years of University work.

2. History of Education.—Since the reformation. A continuation of Course 1. A consideration of the influence of Luther, Erasmus, Milton, Locke, Comenius, Sturm, Rousseau, Pestalozzi, Froe-
bel, Herbart, Spencer, and Horace Mann. II.; M., W., F.; 6; (3). Professor Dexter.

Required: Pedagogy 1.

3. PRINCIPLES OF PEDAGOGY.—The basis for a scientific theory of education critically considered from the standpoint of the individual in his relation to the mass. The developing powers of the child are here studied in their bearing upon social efficiency. The more general problems of Genetic Psychology are considered, as well as those essential to the theory and art of teaching. Lectures, essays, and discussions. I. and II.; M., W., F.; 2; (3). Professor Dexter.

Required: Two years of University work.

Required: Pedagogy 3.

5. THE GROWTH OF EDUCATIONAL SYSTEMS IN THE UNITED STATES.—A historical study of the development of the present school system in our own country. Beginning with the earliest attempts at private and public schools in the colonies, the movements are traced to the present time. Special time is given to the study of secondary school growth. I.; Tu., Th.; 6; (2). Professor Dexter.

Required: Two years of University work.

6. CONTEMPORARY EDUCATIONAL CONDITIONS AND MOVEMENTS IN THE UNITED STATES.—In this course are studied critically the educational tendencies of to-day. Besides the broader meaning of the whole movement, the school systems of our larger cities and towns are carefully studied. II.; Tu., Th.; 6; (2). Professor Dexter.

Required: Pedagogy 1, 3 or 5.

7. A COMPARATIVE STUDY OF THE SECONDARY SCHOOLS OF FRANCE, GERMANY, ENGLAND, AND AMERICA.—In this course are considered the French Lycées, the German Gymnasia, the English Board, Public, and Church Schools, and the American Academies and High Schools. Their resemblances and differences are carefully noted, as well as the conditions which have led up to each. II.; Tu., Th.; 2; (2). Professor Dexter.

8. HIGH SCHOOL THEORY AND PRACTICE.—A critical study of High School Courses as carried on in our country, together with the
method of presentation of the various subjects. I. and II.; Tu., Th.; 7; (2). Assistant Professor Brooks.

9. **Seminar in Education.**—The subject for 1900-1901 is *School Supervision.* The problems of the modern city superintendent from both the educational and business standpoints will be considered. Special attention is given to the problems of school architecture and sanitation. Discussions, reports, and lectures by those actively engaged in the work of superintendency. I. and II.; arrange time; (1). Professor Dexter and Assistant Professor Brooks.

**Courses for Graduates**

In these there is sufficient elasticity to meet the wants of individual students. Advanced work is offered in the history and in the philosophy of education, in which original sources are consulted and special periods critically studied. Experimental and statistical problems in education and child study are also directed. Candidates for advanced degrees are expected to present theses representing original work of merit, ready for publication.

**PHILOSOPHY**

1. **Logic.**—For the required credit in philosophy, students may select either of the following courses:

   a. This course considers the nature of judgment and inference. Emphasis is laid upon practice in division, definition, forms of syllogism, deductive and inductive fallacies. This course is recommended to students who are interested in psychology or philosophy. I.; M., W., F.; 2; (3).

   b. Special attention is given to fallacies and to the problems, grounds, and principles of induction. The study is designed not only to direct the student in practical reasoning and correct thinking, but also to familiarize him with the principles and methods of scientific investigation. II.; M., W., F.; 2; (3). Professor Daniels.

2. **Outlines of Philosophy.**—A general introduction to the study of philosophy. I.; M., W., F.; 4; (3). Professor Daniels.

3. **Ancient and Medieval Philosophy.**—A rapid survey is taken of the development of speculative thought, beginning with the early Greek philosophers and continuing through the mediæval period. I.; Tu., Th.; 3; (2). Professor Daniels.

4. **Modern Philosophy.**—This course considers the formation and development of the problems and conceptions in philosophy from Descartes to the present time. Selections from the philosophical
masterpieces of this period are carefully studied. Special emphasis is laid upon the philosophy of Kant. 

5. **Advanced Philosophy.**—The seventeenth century philosophy. A critical study of Descartes, Spinoza, and Leibnitz. I. and II.; Tu., Th.; 7; (2 each semester). Professor Daniels.

*Required:* Two semesters in philosophy or psychology.

6. **Practical Ethics.**—In this course those questions which bear the closest relation to life and conduct are raised and discussed. The duties of the individual, the family, and the state are among the subjects considered. Special subjects in social ethics may be taken up. I.; Tu., Th.; 1; (2). Professor Daniels.

7. **History and Criticism of Ethical Theories.**—A careful and historical examination of the various types of ethical theory, including rational, hedonistic, eudemonistic, esthetic, and evolutionary ethics. It is designed to make the student as familiar as the time allows with the writings of representative men of the various schools. II.; M., W., F.; 1; (3). Professor Daniels.

8. **Esthetics.**—A brief history and a critical study of the various theories of the beautiful. Lectures and assigned readings. II.; Tu., Th.; 4; (2). Professor Daniels. [Open to juniors and seniors.]

**COURSE FOR GRADUATES**

101. The Philosophy of Kant.

**PHYSICAL TRAINING**

**For Men**

1. **Gymnasium Practice.**—Two half hours' class-work, and two half hours' prescription exercises, each week. *Required of freshmen throughout the year.* With course 3, 2½ hours. Professor Shell.

2. **Gymnasium Practice.**—Two half hours' class-work and two half hours' prescription exercises. *Throughout the year.* With course 4, 2½ hours. Professor Shell.

*Required:* Physical Training 1 and 3.

3. **Lectures.**—Lectures upon bodily health, including such subjects as the bath, sleep, diet, ventilation, clothing, injuries from over-work and study, sedentation, tobacco, alcohol, improper posture, etc. *Once a week throughout the year.* Freshmen are required to attend this course. With course 1, 2½ hours. Professor Shell.
4. Lectures.—Muscular form and action, effects of exercise, causation of fatigue, breathlessness, coordination, automatism, deformities, etc. Once a week throughout the year. With course 2, 2½ hours. Professor Shell.

Required: Physical Training 1 and 3.

5. Theory of Physical Training.—For those preparing as instructors. Study of the systems of gymnastics; methods of teaching; class work; use of apparatus; effects on body; measurements; testing, prescription. Throughout the year. 2 hours. Professor Shell.

Required: Courses 2 and 4.

6. Competitive Athletics.—History of games and sports; general training; special forms and methods of coaching for track, fencing, wrestling, boxing, base ball, foot ball, basket ball, hockey, etc. Throughout the year. 2 hours. Professor Shell.

Required: Physical Training 2 and 4.

For Women

7. Practice.—Class and prescription exercises in the gymnasium and field. Three hours a week throughout the year. Required of freshmen. With course 9, 3 semester hours. Miss Carpenter.

8. Practice.—Three hours a week throughout the year. 2 hours. Miss Carpenter.

Required: Physical Training 7, 9.

9. Hygiene.—The same as physiology 6, which see. Required of freshmen. With course 7, 3 hours. Professor Kemp.

PHYSICS

1. General Physics.—A course of experimental lectures. The subjects for the first semester are mechanics, heat and sound; for the second semester, electricity and magnetism and light. The course is always to be taken in connection with the laboratory course, Physics 3. I. and II.; Lectures, M., W., F., 5; Quiz, Tu. or Th., 3; (3). Professor Carman and Mr. Carpenter.

Required: Mathematics 3 or 4.

2. Minor Course in Physics.—The course includes selected parts in mechanics, heat, light, and electricity, and is designed for students in general science and in medical courses. Second semester. II.; Lectures, Tu. and Th., 5; Laboratory, 7 periods; arrange time; (5). Professor Carman, Assistant Professor Quick, and Mr. Carpenter.

Required: Mathematics 3 or 4.
3. **Introduction to Physical Measurements.**—Laboratory experiments running parallel with Physics I, and required of the same students. The experiments are quantitative, illustrative of lectures, and introductory to more advanced laboratory work. *I. and II.; 3 periods; arrange time; (1½).* Assistant Professor Quick and Mr. Carpenter.

*Required:* Mathematics 3 or 4.

4. **Electrical and Magnetic Measurements.**—Recitations and laboratory. The course of recitations and lectures covers the elementary mathematical theory of electrostatics, magnetism, magnetic properties of iron, electrodynamics, and direct, alternating and polyphase currents. In the laboratory the usual electrical and magnetic measurements are made, the work running parallel with the recitation work. *I. and II.; Lecture, Tu., Th., 6; Laboratory; arrange time; (4).* Assistant Professor Sager.

5. **Advanced Physical Measurements.**—A laboratory course supplemented by lectures. The following lines of work are offered. Each line of work is arranged to take ordinarily one semester, but in special cases a different arrangement of experiments may be made:

   (a) **Mechanics.**—A course of exact measurements of mass, length, volume, densities, time and gravity, using the balance, dividing engine, cathetometer, chronograph, etc.

   (b) **Light.**—Measurements of indices of refraction and wave lengths, using the spectrometer with prisms and grating, and the concave grating with its mounting, also using the optical bench in experiments in interference, etc.

   (c) **Electricity and Magnetism.**—A course of exact measurements of resistance, current, electromotive force, capacity and magnetic quantities.

   (d) **Electricity and Heat.**—A course of measurements of resistance, current, and electrolytic conductivity, and some measurements of specific heat and thermal capacity. Designed particularly for students in chemistry or general science. *I. and II.; arrange time; (3 or 5).* Professor Carman and Assistant Professor Sager.

*Required:* Physics I and 3, or 2.

6. **Introduction to Theoretical Physics.**—A course of lectures and recitations on some branch of theoretical physics. The subjects taken in the last three years have been, Mathematical Theory of Electricity and Magnetism, Advanced Dynamics, and Thermodynamics. The subjects for 1900-1901 will be Thermodynamics and the Mathematical Theory of Electricity and Magnetism. *I. and II.;*
PHYSIOGRAPHY 253

M., W., F.; 6; (3). Professor Carman and Assistant Professor Sager.

Required: Physics 1 and 3, or 2; Mathematics 9.

7. Investigation of Special Problems.—An advanced laboratory course in continuation of Physics 5. The student is given one or more special subjects of investigation to be conducted under the direction of the professors of the department. The machine shop of the department makes possible special and original apparatus. I. and II.; arrange time; (3). Professor Carman and Assistant Professor Sager.

Required: Physics 4 or 5, or equivalent.

8. Mathematical Physics.—A course of lectures and recitations. The subjects treated are changed each year, and are chosen to cover the general subject in two consecutive years, each year being complete in itself. The electromagnetic theory of light is the special subject for 1900-1901. I. and II.; arrange time; (3). Professor Carman.

Required: Physics 5 or 6.

9. Advanced Electrical Measurements.—A course in the theory and practice of the calibration of electrical measuring instruments, using the potentiometer and other standard methods. II.; arrange time; (1). Assistant Professor Sager.

Required: Physics 4.

COURSES FOR GRADUATES

102. Mathematical Physics.
103. Mathematical Theory of Electricity and Magnetism for Engineers.

PHYSIOGRAPHY

1. Physiography.—Three objects are aimed at in this course, viz.: To promote the change in the method of teaching geography so generally advocated in recent years, to provide a rational basis for the study of geographic distribution of animals and plants, to place in their proper light the geographic factors in the history of man and his present well being.

The first part of the semester is devoted to a discussion of the general principles of meteorology, oceanography, and climatology. This is followed by a study of the physical geography of North America and Europe, with reference to the objects named above.
It is assumed that the student has a good understanding of political geography, and of the principles of land development, etc., as set forth in such works as Davis's Physical Geography, Mill's Realm of Nature, or Tarr's Physical Geography. I.; daily; 3 and 4; (5). Professor Rolfe and Mr. Hubbard.

Required: Geology 1 or 3, or an approved entrance credit in Geology, or Physical Geography.

PHYSIOLOGY

1. Major Course.—This course is founded on the previous thorough training of the student in physics, chemistry, and zoölogy. The course is designed primarily to prepare those taking it to enter upon the study of medicine. The work begins with a comprehensive study of the microscopic structure of the tissues in general, and later includes the structure of the organs in particular, with special relation to their functions. The course, together with courses in chemistry recommended for prospective medical students, will complete a very thorough study of physiological chemistry, so far as it relates to the normal composition and functions of the organs and excretions. Frequent demonstrations in experimental physiology are given before the class, and the student is required to perform a number of such experiments under the immediate direction of the instructor. In addition, the students, working in small groups, will be required to perform assigned experiments, and to submit their records and data for examination and criticism. Practical laboratory work is insisted on throughout. I. and II.; daily; 3 and 4; (5 each semester). Professor Kemp.

Required: Physics 1, 3; Chemistry 1, 2, 3a, 5a, 9, 9c; Zoölogy 2.

2. Advanced Course.—Continuation of Physiology 1 through a second year. This course is designed for students who wish to get as thorough a training as possible for the study of medicine, and who can afford to take the full science course at the University leading to the B.S. degree. The work will be made up of lectures, assigned reading, and experiments in the laboratory conducted by the students themselves, under the supervision of the instructor. Course 1 will necessarily give but a limited opportunity for such personal work on the part of the student. Course 2 will enable him to have a fair degree of experience with methods and apparatus used in the most advanced lines of medical study. I. and II.; daily; 3 and 4; (5 each semester). Professor Kemp.
3. **Investigation and Thesis.**—The laboratory of the physiological department is well equipped with instruments of precision for research in histology, physiological chemistry, experimental physiology, and pharmacology. Every facility and encouragement, so far as the resources of the laboratory permit, are offered to those prepared to avail themselves of these for researches leading to theses for the bachelor's, master's, or doctor's degree, or for carrying on original work for publication.

4. **Minor Course.**—This course is planned for literary students and for students of natural science specializing in other lines. Especial emphasis is laid upon those facts that serve as a basis for practical hygiene, and for helping students to teach physiology in high schools. It will consist of lecture demonstrations, recitations, and laboratory work. Students who have had chemistry and zoology in high schools may be admitted to the course at the option of the instructors. *II.; daily; 7 and 8; (5). Professor Kemp.*

   **Required:** Chemistry 1; Biology 1.

5. **Advanced Physiology.**—There are here included the following lines of laboratory work, any one or more of which may be pursued independently of the others: (a) The physiology of foods, and digestion; (b) the blood, circulation, and respiration; (c) the excretions, especially urine-analysis; (d) general physiology of nerve and muscle; (e) advanced vertebrate, especially human, histology. Work to be arranged after consultation with Professor Kemp.

6. **Hygiene.**—This course is offered to both men and women, and must be taken by young women who take physical training for credit. It is designed to impart a knowledge of the conditions of bodily health and activity. The course deals with those practical hygienic problems of everyday life that are wholly or in large part under the control of each individual. *I.; M.; 8; (r). Professor Kemp.*

**Psychology**

The courses in psychology will be announced at the opening of the University in the fall of 1900.

**Public Law and Administration**

1. **Political Institutions.**—Comparative study of modern political systems, their historical development and practical operation. Lectures, assigned readings, reports, and discussions. The first semester is devoted to the leading features of national and state
government of the United States; in the second semester the governments of the leading European states are studied. In connection with History 2 this course makes a full study running through the year. (See announcement under History 2.) I. and II.; M., W., F.; 4; (3). Professor Tooke.

2. JURISPRUDENCE.—Elementary course in the origin, development, and classification of law, followed by an introduction to the fundamental principles of the English Common Law. I. and II.; Tu., Th.; 3; (2). Professor Tooke.

4. INTERNATIONAL LAW.—Sources and historical development. Essential powers of states, their rights and obligations. Laws and usage in times of war. I. and II.; Tu., Th.; 4; (2). Professor Scott.

5. COMPARATIVE ADMINISTRATIVE LAW.—General principles of the administration law of the United States, England, France, and Germany. The appointment, tenure, and duties of officers. Historical and comparative study of local government. I. and II.; M., W.; 3; (3). Professor Tooke.

Required: Public Law and Administration 1 and 2.

6. COMPARATIVE CONSTITUTIONAL LAW.—A comparative study from original sources of the constitutions of the leading European states. In connection with Law 22, this course counts six semester hours. I.; M., W.; 3; (2). Professor Tooke.

Required: Public Law and Administration 1 and 2. [Not given in 1900-1901.]

7. LAW OF MUNICIPAL CORPORATIONS.—History and legal status of the American municipality. I.; M., W.; 2; (2). Professor Tooke.

9. SEMINARY IN MUNICIPAL INSTITUTIONS.—Open to graduates and seniors. I. and II.; arrange time; (2). Professor Tooke.

RAILWAY ENGINEERING

1. LOCOMOTIVE ENGINES.—This work is a study of the constructive features of the locomotive in all its parts and of their relations. The development, applications, and limitations of the various types and their special study with reference to the relations between boiler and cylinder capacity, weight on drivers, speed, hauling capacity, etc. Tendencies in design. Includes also a study of all
accessory apparatus used in the operation of locomotives. *I.*; *Tu.*, *Th.*; *I*; *(2).* Mr. Schmidt.

**Required:** Theoretical and Applied Mechanics *I*; Physics *I*, *3*; Mechanical Engineering *7*.

2. **Locomotive Engine Design.**—The proportions and dimensions of standard locomotives are carefully studied. Calculations and designs relating to boiler and engine details, cylinder proportions for compound types of slide, valves and valve gears. *I.*; *Tu.*, *W.*, *Th.*; *2*, *3*, and *4*; *(3).* Assistant Professor Goodenough.

**Required:** Mechanical Engineering *I* to *7*, *16*, *17*; Theoretical and Applied Mechanics *I*, *2*.

3. **Shop Systems.**—Lectures and readings. Visits of inspection. A study of the proceedings of the societies and railway clubs, and technical press. *I.*; *Tu.*, *Th.*; *6*, *7*, and *8*; *(2).* Mr. Schmidt.

4. **Locomotive Road Tests.**—Arrangements for locomotive road tests have been perfected with several roads entering Champaign and Urbana. Already five locomotives have been equipped for this work and tests made in actual service conditions. This work is greatly facilitated by the use of the dynamometer and railway test cars which are now at the service of the department. This course includes also brake tests and other laboratory work. *I.*; *M.*, *W.*; *arrange time*; *(4).* Mr. Schmidt.

**Required:** Theoretical and Applied Mechanics *3*; Mechanical Engineering *I* to *7*, *14*.

5. **Compressed Air in Railway Service.**—This will include a careful study of the construction and operation of the air-brake system in detail. The air-brake instruction cars of the I. C. R. R. and the C. C. C. & St. Louis Ry. make frequent stops at these points, and the instructors in charge kindly devote sufficient time to illustrate and explain the operation of the air-brake.

The use of compressed air in shop service is also studied. *II.*; *M.*; *2*; *(1).* Mr. Schmidt.

**Required:** Mechanical Engineering *7*.

**Required:** Railway Engineering *I* to *4*.

7. **Advanced Designing.**—Under this head attention will be paid to details of rolling stock, pumps, gas and oil engines for water supply. Special machinery for repair shop service, turntables, and
advanced problems relating to locomotive design. II.; Tu., W., Th.; 6, 7, and 8; (3). Assistant Professor Goodenough.

Required: Theoretical and Applied Mechanics 3; Railway Engineering 1, 4.

8. Dynamometer Car Tests.—Investigations will be made under actual road conditions relating to hauling capacity of engines, train resistance, due to acceleration, grades, curves, and wind pressure. Air-brake service inspections. Automatic records of track conditions as to gauge, surface, joints, and elevation of rails. Tests at stationary plants and railway shops will be made.

Arrangements for careful and scientific sampling of fuels, boiler waters, oils, paints, varnishes, and railway supplies for analysis and tests will be included in this work. II.; F.; arrange time; (1). Mr. Schmidt.

Required: Railway Engineering 4.

RHETORIC AND ORATORY

1. Rhetoric and Themes.—Required for students in the College of Literature and Arts. One two page theme a week, criticised by the class and by the instructor. Weekly report on assigned reading. Cairns' Forms of Discourse. I. and II.; M., W., F.; section A, 1; section B, 3; section C, 7; (3). Miss Kyle.

2. Rhetoric and Themes.—Required for students in the Colleges of Agriculture, Science, and Engineering. One two page theme a week, with an occasional four page theme, criticised by the class and by the instructor. Weekly report on assigned reading. Cairns' Forms of Discourse. I. and II.; M., W., F.; section A, 1; section B, 2; section C, 3; (3). Professor T. A. Clark, Miss Kyle, and Mr. Adams.

3. English Composition.—Daily themes one page in length with exercises not to exceed four pages in length every fortnight. All written work is criticised by the instructor, and, if necessary, is required to be re-written. Wendell's English Composition. I. and II.; M., W., F.; 4; (5). Professor T. A. Clark.

Required: Rhetoric and Oratory 1 or 2.

4. Argumentative Composition.—Lectures on the principles of argumentation. Practice in the preparation of briefs and forensics. During the first semester each student will write one brief and one forensic on a subject suggested by the instructor. Each member of the course will debate at least three times as principal

Required: Rhetoric and Oratory 1 or 2.

5. ORAL DISCUSSIONS.—Weekly debates on economic and political subjects, preceded by briefs, criticism of form, delivery, and subject matter as in Rhetoric 4. Adapted to the needs of students who have had experience in debating. I. and II.; Th.; 8 and 9; (2). Mr. Adams.

Required: Rhetoric and Oratory 1 or 2 and 4.

6a. ENGLISH COMPOSITION (Advanced Course).—Two three-page exercises a week and four long themes a semester. Written criticism of themes by both students and instructor; all long themes to be re-written after criticism. Bates' Talks on Writing English. I.; M., W., F.; 5; (3). Professor T. A. Clark.

Required: Rhetoric and Oratory 1 and 3.

6b. ENGLISH COMPOSITION AND LITERATURE.—The study of rhetorical principles as seen in literary masterpieces. Rhetorical analysis of the essays of Swift, Lamb, Newman, Arnold and others. Two three-page themes a week and one long exercise a semester. II.; M., W., F.; 5; (3). Professor T. A. Clark.

Required: Rhetoric and Oratory 1 and 3.

7a. PUBLIC SPEAKING.—A course for practical training in public speaking, beginning with the recitation of simple narrative and descriptive selections and proceeding with more difficult extracts from orations, according to individual ability. The object is to secure naturalness in form and directness in delivery. Criticism and instruction regarding position, enunciation, volume, inflection, and gesture. The number admitted to this course is limited to thirty-six. I.; M., Tu., F.; 7; (1). Mr. Adams.

7b. PUBLIC SPEAKING.—Same as Rhetoric and Oratory 7a, beginning with the second semester. This course is not open to those who have taken Rhetoric and Oratory 7a. II.; section A, M., section B, Tu., section C, F.; 7; (1). Mr. Adams.

8. SEMINARY.—Methods of teaching English Composition. Open to senior and graduate students. I. and II.; W.; arrange time; (1). Professor T. A. Clark.

SOCIOLOGY

[See under Anthropology and Economics, pp. 178, 205.]
SPANISH

I. Grammar and Reading.—Edgren's Spanish Grammar; Knapp’s Spanish Readings; Cervantes’ Don Quijote; outlines of Spanish literature. I. and II.; M., W., F.; arrange time; (3). Professor Fairfield.

THEORETICAL AND APPLIED MECHANICS

[See Mechanics, p. 239.]

VETERINARY SCIENCE

I. Anatomy and Physiology.—The anatomy and physiology of the domestic animals, diseases of the bony structure and lameness. The instruction is given by lectures aided by demonstrations with use of skeletons, and of other apparatus, as follows: Dr. Auzoux’s complete model of the horse, which is in ninety-seven pieces and exhibits three thousand details of structure; papier-mâché model of the horse’s foot; the teeth of the horse; and dissections of animals. This work is supplemented with the study of text-books. Strange-way’s Veterinary Anatomy, Mills’s Animal Physiology, and Diseases of Horses and Cattle. I.; daily; 3; (5). Professor McIntosh.

2. Veterinary Materia Medica.—This subject, which treats of the agents for the cure of disease or injury, and for the preservation of health among domestic animals, is taught by lectures and text-books, illustrated by specimens of the drugs used in veterinary practice. The compounding of medicines also receives attention. Text-books: Finlay Dun’s Veterinary Materia Medica. I. and II.; daily; 2; (5). Professor McIntosh.

3. Theory and Practice of Veterinary Medicine and Surgery.—This subject is taught by lectures and text-books on the diseases of domestic animals, and is illustrated with specimens of morbid anatomy and by observations and practice at the free clinics. The latter are held at the Veterinary Infirmary once a week. The students assist in the operations, and thus obtain a practical knowledge of the subject. Dissections and post-mortem examinations are made as cases present themselves. Text-books, Diseases of Horses and Cattle, by D. McIntosh, and Williams’s Practice of Veterinary Medicine and Surgery. II.; daily; 3; (5). Professor McIntosh.

4. Veterinary Sanitary Science.—This branch is taught by a series of lectures embracing inspection of cattle, horses, sheep, and pigs for contagious diseases; a discussion of the influence of civiliza-
tion and traffic on animal plagues, their origin and nature, diffusion, reception, and mode of access; the prevention and suppression of contagious diseases. \(I; \) daily; \(I; \) (5). Professor McIntosh.

5. MINOR.—The principal diseases of domestic animals. This is required for graduation unless the student elects a greater quantity of veterinary science. \(II.; \) first half; \(4; \) (2\(\frac{1}{2}\)). Professor McIntosh.

[Clinic on Wednesdays for all courses.]

ZOÖLOGY

1. GENERAL INVERTEBRATE ZOÖLOGY.—The work here described is so related to Zoölogy 2 that both form a continuous course of a year, either semester of which may be taken first. Commonly, however, Zoölogy 1 should be taken in the freshman year, preceding Zoölogy 2. It is devoted especially to a series of laboratory studies of invertebrate types, and to lectures on the morphology, physiology, and relations to nature, of this selected series, and on cytology and general zoölogical theory. \(II.; \) Lecture, \(M., W., F.; \) 3; Laboratory 7 periods; arrange time; (5). Assistant Professor Smith.

Required: Art and Design 1, an entrance credit in chemistry or Chemistry 1, an entrance credit in Zoölogy or Biology 1 or Zoölogy 5.

2. VERTEBRATE ZOÖLOGY AND COMPARATIVE ANATOMY.—In the laboratory work of this course principal attention will be given to the anatomy of Necturus and to anatomical and systematic studies of fishes, birds, and mammals, especial reference being had to the anatomy of man. The more difficult parts of laboratory technology will be given in this course, which will also contain lectures on the general theory of organic development as illustrated by the doctrine of the descent of man. \(I.; \) daily; 4 and 5; (5). First semester. Assistant Professor Smith.

Required: Biology 1, or Zoölogy 1.

3. EMBRYOLOGY.—This course begins with a study of the sex cells and a discussion of theories of heredity, followed by a consideration of the early stages in the development of the egg. The formation of the vertebrate body is then studied in the amphibian, the chick, and the pig. Instruction is given in the preparation of embryological material and in graphic reconstruction from serial sections. \(II.; \) daily; 2 and 3; (5). Assistant Professor Kofoed.

Required: Zoölogy 2.

4. ADVANCED ZOÖLOGY.—Under this head is offered an oppor-
tunity for individual advanced work for one or two semesters along lines to be selected in consultation with the instructor. It may include field and systematic zoölogy, or a laboratory course in mammalian anatomy, but is otherwise essentially a research course for students specializing in zoölogy or entomology. One semester of this course or Zoölogy 6 will be required of all intending to graduate with a zoölogical thesis. If five or more students offer for the same work under this head they will receive class instruction, but otherwise students in this course will commonly be assembled as a class only for seminary work. From those taking this course selection of student assistants for the zoölogical and entomological laboratories will commonly be made, credit being given on the course for such assistance according to the recommendation of the head of the department, subject to the approval of the college faculty. I. and II.; arrange time; (5 each semester). Professor Forbes, or Assistant Professor Smith.

Required: Zoölogy 1 and 2.

5. ELEMENTARY ENTOMOLOGY.—This is a laboratory and lecture course in general entomology, open to all University students, pursued without especial reference to economic ends, complete in itself, but leading to the course in general entomology (Zoölogy 6). The laboratory work is strictly entomological, but the lecture course is in great measure a course in general biology, with entomological illustrations. I.; daily; 1 and 2; (5). Professor Forbes.

6. GENERAL ENTOMOLOGY.—This is a course of two semesters, the work in either of which may be taken separately, offered to students who have had a sufficient amount of elementary zoölogy as a preparation. It comprises laboratory and library studies, field work, insectary work, field observation, the collection and preservation of specimens, and the preparation and illustration of manuscript. Special instruction is given in this course in the art of entomological illustration under the supervision of an expert zoölogical artist. This course, or one semester of zoölogy 4, will be required of all intending to graduate with a zoölogical thesis. I. and II.; daily; 3 and 4; (5). Professor Forbes.

Required: Zoölogy 1 or 5.

7. PRACTICAL ENTOMOLOGY.—By means of laboratory studies and lectures and field and insectary observations, students will be made familiar with the commonest and most important injurious insects, and with means of preventing or arresting their injuries. II.; daily; 6 and 7; (5). Professor Forbes.
8. Thesis Investigation.—Candidates for graduation in the College of Science who select a zoological subject as a thesis are required to spend three hours a day during their senior year in making an investigation of some selected zoological subject. While this work is done under the general supervision of an instructor, it is in its methods and responsibilities essentially original work. I. and II.; daily; arrange time; (5). Professor Forbes and Assistant Professor Kofoid.

Required: Two years in zoological courses, including one semester of zoology 4.

Courses for Graduates

101. Systematic and Faunistic Zoology.—This course consists of studies of invertebrate animals (including insects), and of aquatic vertebrates, so directed as to give as nearly as possible an exhaustive knowledge of a taxonomic group or of a selected geographic assemblage. If a suitable taxonomic group is chosen, its space and number relations within a definite area will be thoroughly worked out by the precise methods of modern faunistic zoology, including quantitative collections made by uniform methods at regular periods, and the comparative measurement or enumeration of such collections. If a geographic assemblage be selected, critical determinative work will be followed by both qualitative and quantitative studies of the various groups associated, with a view to accumulating data for an examination of the interactions of the assemblage.

102. Advanced Economic Entomology.—This is a research course in systematic and experimental entomology which involves the application to insects injurious to agriculture and horticulture of the methods and general ideas of the preceding course. It is intended to prepare students in a thoroughgoing manner for first-class investigation work in this field, and for the direction of entomological operations in agricultural experiment stations.
DEGREES

BACHELORS' DEGREES

The usual bachelors' degrees are conferred upon those who satisfactorily complete the courses of study described under the different colleges and schools. A candidate for a bachelor's degree must pass in the subjects marked prescribed in his chosen course, and must conform to the directions given in connection with that course in regard to electives. In the College of Literature and Arts, of Science, and of Agriculture, credit for 130 hours is required for graduation. In the College of Engineering and in the schools the candidate must complete the course of study as laid down. The number of hours required includes five in military science, and two and one-half in physical training, for men, and for women three in physical training. Men excused from the military requirements, and women who do not take courses in physical training, must elect in lieu thereof an equivalent number of hours in other subjects.

In all cases in which a thesis is required,* the subject must be announced not later than the first Monday in November, and the completed thesis must be submitted to the dean of the proper college by June 1st. The work must be done under the direction of the professor in whose department the subject naturally belongs, and must be in the line of the course of study for which a degree is expected. The thesis must be presented upon regulation paper, and will be deposited in the library of the University.

1. The degree of Bachelor of Arts is conferred on those who complete a course in the College of Literature and Arts.

2. The degree of Bachelor of Science is conferred on those who complete a course in the College of Engineering.

* See requirements for graduation in the different colleges.

264
DEGREES

of Science, or of Agriculture. The name of the course will be inserted in the diploma.

3. The degree of Bachelor of Laws is conferred on those who complete the course in the College of Law.

4. The degree of Doctor of Medicine is conferred on those who complete the course in the College of Medicine.

5. The degree of Bachelor of Library Science is conferred on those who complete the course in the School of Library Science.

6. The degree of Bachelor of Music is conferred on those who complete one of the courses in the School of Music.

7. The degree of Graduate in Pharmacy is conferred upon those who have satisfied the requirements therefor in the School of Pharmacy.

ADVANCED DEGREES

No degrees are given for study in absentia, except that graduates of this University, who become members of the Graduate School and reside elsewhere, may receive a second degree, upon the completion of their courses of study within not less than three years of the date of registration. For a graduate of this University who has won recognized distinction in a special line of investigation, and who otherwise fulfills the conditions for a doctor’s degree, the requirement of residence for that degree will be such as may be imposed by the General Faculty of the University, on presentation of the case by the Council of Administration. Advanced degrees are conferred by the Trustees of the University only upon recommendation of the General Faculty, based upon information furnished by the Council of Administration.

SECOND DEGREES

The second degrees conferred by this University are as follows:

Master of Arts, after Bachelor of Arts.

Master of Science, after Bachelor of Science in courses of the colleges of Agriculture and Science.
Master of Architecture, after Bachelor of Science in courses in Architecture and Architectural Engineering.

Civil Engineer, after Bachelor of Science in the course in Civil Engineering.

Electrical Engineer, after Bachelor of Science in the course in Electrical Engineering.

Mechanical Engineer, after Bachelor of Science in the course in Mechanical Engineering.

Pharmaceutical Chemist, after Graduate in Pharmacy.

Graduates of other colleges and universities which have equivalent requirements for baccalaureate degrees may be given second degrees determined in kind by comparison with the usage described above.

All candidates for second degrees are required to register in the Graduate School; to conform to the conditions outlined under "Admission," "Registration," and "Examinations" (pp. 40 and 55); to pursue an approved course of study for one academic year in residence, or, in the case of graduates of this University, for three years in absentia; and to pass satisfactory examinations upon all the studies of the approved course.

Each candidate for a second degree must present an acceptable thesis in the line of his major subject of study. The subject of this thesis must be announced to the Dean of the General Faculty not later than the first Monday in November of the academic year in which the course is to be completed. The completed thesis, upon regulation paper, must be presented, with the certified approval of the professor in charge, to the Council of Administration not later than June 1st.

The period of required study begins from the date of registration in the Graduate School.

Doctor's Degree

The degree of Doctor of Philosophy may be conferred upon any member of the Graduate School of not less than three years' standing who shall have reached high attain-
ments in scholarship, including a sufficient knowledge of the Latin, French, and German languages to serve the purposes of research in his principal specialty, who shall have shown marked ability in some line of literary or scientific investigation, and shall have presented a thesis giving clear indications of such scholarship and of such power of research. At least the first two, or the last one, of the three years of study must be in residence at the University, and the entire course of study must be in accordance with the regulations of the Graduate School.

The time and study required for a master's degree may be included in the three years required, but approval of a course of study for a doctor's degree must be upon the condition that the candidate is prepared through his baccalaureate work, or otherwise, to enter at once upon advanced studies in the line of this major subject, and that work on this major subject be continued through the three years.

The final examination of a candidate for the doctor's degree is conducted by a committee consisting of the head of the department under which the major subject has been pursued, as chairman, and of not less than two additional members of the General Faculty of the University, appointed for the purpose by the Council of Administration. This examination covers the subjects of the course approved for the degree, but is specially searching upon that on which the major work has been done. This examination occurs in the week preceding that upon which commencement day occurs.

Each candidate for a doctor's degree must announce to the Dean of the General Faculty a thesis subject not later than the first Monday in November of the academic year at the close of which the award of the degree is expected. A fair copy of the thesis must be submitted, with a certified approval of the committee on examinations, to the Council of Administration not later than the first day of June. If the thesis is approved by the Council the
candidate must have it printed and must deposit not less than one hundred copies with the librarian of the University.

FELLOWSHIPS

The Trustees of the University have established eight fellowships, each with a stipend of three hundred dollars, payable in ten monthly installments.

The rules governing appointments to these fellowships are as follows:

1. The purpose of these fellowships shall be to promote advanced scholarship and original research in the University.

2. The fellowships shall be open to graduates of this and similar institutions. Those who are to complete an under-graduate course previous to the academic year for which appointments are made shall be eligible, with others, as candidates.

3. Nominations to fellowships, accompanied by assignments to special departments of the University for instructional work, shall be made by the Council of Administration to the Trustees of the University, upon applications received by the President of the University each year, not later than the twenty-fifth day of April. These nominations shall be made at a meeting of the Council called for that purpose within the month of May. The appointments by the Trustees are made at their regular meeting in June, and shall take effect the first day of the following September. Vacancies may be filled by similar nominations and appointments at other times.

4. Nominations to fellowships shall be made upon the grounds of worthiness of character, scholastic attainments, and promise of success in the principal line of study or research to which the candidate proposes to devote himself. Consideration shall also be given to the probable value or usefulness of the services of the candidate as an assistant in instruction, but this shall not be deemed the primary object of the appointment. Other things being equal, preference
shall be given to those graduates of this University who have pursued a specialized course.*

5. Candidates must present, with their applications, full information concerning themselves and their qualifications for advanced study and research work, including any written or printed essays or results of investigation, and must name the subject in which they wish to do their major work.

6. Fellowships shall be good for one year. Appointments may not be usually renewed to the same persons, and in no case for more than one additional year; but an appointment as honorary fellow, without stipend, may be made as specified for paid fellowships in the case of any one who has held a regular fellowship and has shown distinguished merit in his work.

7. Fellows shall be constituted members of the Graduate School, shall have all of the privileges and bear all of the responsibilities of such membership. Each regular fellow may be called upon to render service in instruction throughout the year in the department in which his major subject lies, equal to one hour daily of class instruction or to two hours daily of laboratory supervision. This service will receive such credit as the Council of Administration may determine in each case. Blank forms for application may be obtained by addressing the Registrar.

SCHOLARSHIPS

STATE

A law passed by the General Assembly of the State of Illinois at the session of 1895 provides that there shall be awarded annually to each county of the state one state scholarship, which shall entitle the holder thereof, who shall be a resident of the senatorial district to which he is accredited, to instruction in any or all departments of the University of Illinois for a term of four years, free from

* See pp. 84, 121. All members of the College of Engineering and of Agriculture, of the chemical and mathematical groups in the College of Science, of the College of Law, and of the Schools of Library Science and Music, are considered as pursuing specialized courses.
any charge for tuition or any incidental charge, unless such
incidental charge shall have been made for materials used or
for damages needlessly done to property of the University;
Provided, that in counties having two or more senatorial
districts there shall be awarded annually one additional
scholarship for each of said senatorial districts.

A competitive examination under the direction of the
Superintendent of Public Instruction shall be held at the
county courthouse in each county of the state upon the first
Saturday of June in each and every year by the county super-
intendent of schools upon such branches of study as said
Superintendent of Public Instruction and the President of
said University may deem best.

Questions for such examinations shall be prepared and
delivered by the President of the University to the Superin-
tendent of Public Instruction, who shall attend to the printing
and distribution thereof to the several county superinten-
dents of schools prior to such examinations.

The law also provides that in case the scholarship in any
county is not claimed by a resident of that county, the Super-
intendent of Public Instruction may fill the same by appoint-
ing some candidate first entitled to a vacancy in some other
county.

Candidates to be eligible to a state scholarship must be
at least sixteen years of age, and must have been residents
of their respective counties for the year preceding the
examination.

A student holding a state scholarship who shall make it
appear to the satisfaction of the President of the University
that he requires leave of absence for the purpose of earning
funds to defray his expenses while in attendance may, in the
discretion of the President, be granted such a leave of absence,
and may be allowed a period not exceeding six years from the
commencement thereof for the completion of his course at
said University.

The examinations will be held June 2, 1900, and June 1,
1901.
For particulars about them write to Hon. Alfred Bayliss, Superintendent of Public Instruction, Springfield, or to W. L. Pillsbury, Registrar, Urbana.

Any person, whether a candidate for a scholarship or not, may be examined for admission to the University at these state scholarship examinations.

SCHOLARSHIPS IN THE COLLEGE OF AGRICULTURE

The University will receive into the College of Agriculture annually one student from each county, outside of Cook County, and one from each of the first seven congressional districts of the state, upon the recommendation of the executive committee of the Illinois Farmers' Institute; matriculation and incidental fees are remitted to the holders of such scholarships; the benefits of the same are good for two years; and special students are eligible therefor: Provided, that the persons so recommended shall not have been previously in the University and shall comply with all the conditions of admission to the College of Agriculture.

Should there be more than one candidate from a county or congressional district, one of them shall receive the scholarship of his county or district and the other or others may be assigned to vacancies which may exist in other counties or congressional districts, as is customary with state scholarships.

For further particulars, address A. B. Hostetter, Secretary Illinois Farmers' Institute, Springfield.

MILITARY

Students who have gained 4 hours in class room military instruction and 4 in drill practice, are eligible for appointment as commissioned officers of the battalion. Those attaining this rank may be awarded special scholarships, good for one year, and equal in value to the University term fees for the same length of time.
PRIZES

THE HAZLETON PRIZE MEDAL

Capt. W. C. Hazleton provided in 1890 a medal, of beautiful and artistic design, which is to be awarded, at a competitive drill to be held near the close of the year, to the best drilled student. Each competitor must have been in attendance at the University at least sixteen weeks of the current college year; must not have had more than four unexcused absences from drill; and must present himself for competition in full uniform.

The award is made for excellence in these particulars:

1. Erectness of carriage, military appearance, and neatness.

2. Execution of the school of the soldier, without arms.

The successful competitor will receive a certificate setting forth the facts, and may wear the medal until the 15th day of May following, when it will be returned for the next competition.

IN ORATORY

The Trustees of the University appropriate every year the sum of one hundred dollars for prizes in debate. The amount is divided into three prizes, of fifty, thirty, and twenty dollars, respectively, and these are awarded to the three participants whose work is adjudged best.

The debate is held some time in the month of February. A preliminary contest takes place in December, and is open to all members of the three upper classes. From the list of contestants in the preliminary debate six are selected to take part in the final competition.

INTERSCHOLASTIC ORATORICAL CONTEST

A medal of the value of twenty dollars is offered annually by the University to the high schools of the state for the best oration delivered in a competitive contest between their representatives. This contest takes place in the spring at the time of the interscholastic athletic meet.
EDWARD SNYDER DEPARTMENT OF STUDENTS' AID

In 1899 Professor Edward Snyder, Professor of the German language and literature, *emeritus*, gave to the University the sum of $12,000, to be loaned to worthy students to enable them to finish their courses in the University.

This fund is, by action of the Trustees, available to junior and senior and graduate students who need aid to remain and complete their work. The minimum loan made will be fifty dollars ($50), and the maximum will be one hundred and fifty dollars ($150) to a junior and two hundred dollars ($200) to a senior or graduate student. Notes of hand are taken for the amount of the loans, with 5 per cent. interest. The maximum time limit is three years for juniors, and two years from the ensuing thirtieth day of July to seniors and graduates.

Applications for loans will be passed upon by the Council of Administration and approved by the Finance Committee of the Board of Trustees of the University.

**TO WHOM LOANS MAY BE MADE**

Loans will be made to matriculated students only who have attained at least the rank of full juniors, who have been in residence at this University at least one year and are at the time students in residence at this University, and who have declared their intention to graduate.

In recommending loans preference shall be given to those students who are farthest along in their University work and who have shown themselves most assiduous and successful in their studies, and who have shown habitual economy in life.

No distinction shall be made among students on account of sex or as to course of study.

A loan will not be recommended for any student who is believed to have been financially or morally delinquent in any respect.
Information given by applicants will be considered confidential on the part of the University authorities.
Applications for loans must be addressed to
The President of the University,
Champaign, or Urbana, Illinois.

CHICAGO CLUB LOAN FUND

The Chicago Club of the University of Illinois offers two loans of $250.00 each, payable to the beneficiary, $100.00 the first year, $75.00 the second year, $50.00 the third year, and $25.00 the fourth year. The loans are offered to residents of Cook County, Illinois, only, and are to be awarded upon competitive examination to those obtaining the highest average grades. The loans are due six years after matriculation. They bear no interest while the student is in the University, but six per cent after graduation. The examination questions are prepared at the University and cover the same subjects as those for the state scholarships.

The beneficiaries of this fund also have their incidental fees, amounting to $24.00 a year, remitted by the Trustees.

CLASS OF 1895 LOAN FUND

This is a fund of $250.00, established by the class of 1895, to be loaned to needy and deserving students. According to the conditions of the gift, one-fifth of the amount is to be loaned annually, and is open to members of the freshman class only. No person may receive the benefit of the fund more than four years. The loan bears interest at the legal rate from the time the recipient leaves the University, and is due, one-half in five years, and one-half in six years, after matriculation. The management of the fund is in charge of the Council of Administration.

SOCIETIES AND CLUBS

LITERARY SOCIETIES

The Adelphic and Philomathean societies for men, and the Alethenai for women, occupy large halls, which
the members have appropriately furnished and decorated. Meetings are held Friday evenings throughout term time.

THE CHRISTIAN ASSOCIATIONS

The Young Men's and the Young Women's Christian Associations are active and useful organizations, and have a large membership.

Subscriptions have been made by students and graduates, amounting to $23,000.00, toward a new building for these organizations. A canvass has been started outside with the hope of raising the sum to $32,000.00. If this is successful the building will be begun at once. An excellent site has been purchased.

CLUBS AUXILIARY TO COURSES OF STUDY

AGRICULTURAL CLUB

This club meets semi-monthly. It is devoted to the discussion of topics of theoretical and practical interest to students of agriculture. All students connected with the University are eligible to membership.

ARCHITECTS' CLUB

This club meets once in two weeks for the consideration of current topics of architectural interest and subjects connected with the study of architectural history. All students pursuing architectural studies are eligible to membership.

CIVIL ENGINEERING CLUB

This club meets the second and fourth Saturday evenings of each month for the reading and discussion of papers relating to civil engineering. All students pursuing the civil engineering course may become members.

THE ENGLISH CLUB

The English Club is composed of members of the Faculty, and of students who have done especially good work in English. The work of the club is confined to the study of recent writers of fiction and of poetry. The membership is
limited to thirty. Meetings are held on the second Monday of each month.

**FRENCH CLUB**

*Le Cercle Français* includes students who have had at least one year's work in French. The club meets once a month throughout the year. Its proceedings are conducted in French, the object being to supplement the work of the classroom by the practical handling and understanding of the language.

**THE LATIN CLUB**

This is an organization for the purpose of promoting interest in the language and institutions of the Roman world. It meets once in two weeks.

**LIBRARY CLUB**

The instructors and students of the Library School have organized a Library Club. Any member of the staff of the University library, of the Champaign public library, or of the Urbana public library, or any student who is registered for the Library School may become an active member. Trustees of the three libraries before mentioned are considered honorary members. Any others interested in library progress may become associate members.

Meetings are held once in three weeks during the college year. The first and last meetings of the year are of a social nature. The intervening meetings are devoted to topics of literary or technical library interest.

**MECHANICAL AND ELECTRICAL ENGINEERING SOCIETY**

This club meets on the first and third Saturday evenings of each month. All students pursuing mechanical and electrical engineering studies are eligible to membership. Papers relating to subjects of interest to members are presented and discussed at each meeting.

**MEDICAL CLUB**

The Medical Club is composed of students, irrespective of courses and departments, who are preparing for medical
study, or who are for any reason interested in medical subjects. Its programs consist of lectures by members of the biological faculty and by physicians, and of papers prepared by members of the club. It meets weekly.

MUSICAL CLUBS

These are described under the School of Music (p. 149).

THE NATURAL HISTORY SOCIETY

This society is composed of instructors and students interested in the natural sciences. It conducts field excursions and exhibitions of objects of natural history, and provides occasional lectures on science subjects of general interest.

ZOÖLOGICAL CLUB

The University Zoölogical Club is composed of advanced students and instructors in the zoölogical and physiological departments, together with such other biological instructors and advanced students as are interested in its subjects. Its sessions are devoted to the presentation and discussion of abstracts of recent biological literature and of the results of investigation by the members of the club. It meets weekly in Natural History Hall.

THE ENTOMOLOGICAL CLUB

This club is composed of instructors in entomology, entomological assistants in the State Laboratory of Natural History and the State Entomologist’s office, and advanced students in entomological courses. It meets weekly in Natural History Hall for the presentation of the results of investigation and discussions of current entomological literature.

MILITARY SCIENCE

The military instruction is under the charge of a graduate of the U. S. Military Academy and officer of the regular army of the United States. The course as a whole has special reference to the duties of officers of the line. A full supply of arms and ammunition is furnished by the War
Department, including 300 cadet rifles and accoutrements, and two field pieces of artillery.

Every male student able to perform military duty, and not excused for sufficient cause, is required to drill twice each week until he has gained credit for 4 semester hours. He is also required to study Drill Regulations for Infantry and to recite upon the same once a week until he gains credit for one semester hour. This practical instruction begins as soon as possible after he enters the University; but a preparatory student carrying no freshman studies and not expecting to matriculate during the year, is not permitted to drill. The standings in study and drill are placed on record, with other class credits; one semester of recitations and drill count two hours, and the three remaining semesters of drill three hours, and are requisite to graduation in every University course.

Appointments in the battalion are made on nomination by the professor in charge and confirmation by the Faculty.

Students who have passed one examination in the drill regulations and have gained 1 hour's credit in drill practice are eligible for corporals; those having 2 hours' credit in each are eligible for sergeants; and those having 4 hours' credit in each, for lieutenants and for officers of higher rank.

The battalion (four companies) is composed mainly of the members of the freshman and sophomore classes, the first supplying the corporals, the second, the sergeants. The lieutenants are taken from those of the junior class, and the major and captains from those of the senior class, who have passed through the lower grades satisfactorily.

A special military scholarship, good for one year, is open to each student who attains the grade of a commissioned officer, the value of which is paid the holder at the close of the year.

An artillery detachment is organized mainly from the second year, or sophomore, class, which receives practical instruction twice each week during the college year.

Toward the close of the year, a committee appointed by
the Faculty examines candidates for nomination to the Governor of the state to receive commissions as brevet captains in the state militia. Candidates must be members of the senior class in full standing at the time of this examination; must have completed the course of military studies; must have served three terms as captains or lieutenants, and must be approved by the Faculty as having good reputations as scholars, officers, and gentlemen.

The Trustees have prescribed a uniform of cadet gray, coat trimmed with black mohair braid, trousers with black cloth stripe, cut after the U. S. army pattern.

In order that all uniforms worn at this University may be, in quality, make, and finish in strict accordance with the specifications adopted by the Board of Trustees, all students enrolled in the military department will be required to obtain them from that firm only that may, for the time being, be under agreement and bond with the Trustees to furnish said uniforms at a stated price and of standard quality.

The University Cornet Band is composed of students, and every full term of service therein is counted as one term of drill.

PHYSICAL TRAINING

FOR MEN

The main object of the work of this department is to preserve the bodily health of the students by careful physical examinations, and rational prescriptions of exercises; by correcting physical deformities, and imperfect development; by teaching proper methods of living; and by encouraging proper intercollegiate sports.

Each student is required to undergo a physical examination so that a correct knowledge of his bodily condition may be obtained, and proper exercises prescribed. Regular classes are formed for drill on the various gymnasium appliances. Lectures are given upon personal hygiene.

All competitive athletic games are under the direct
supervision of the professor of physical training, and his medical examination is required to show that membership on any team will tend to improve the physical condition, and not cause injury.

Two courses are offered to those who wish to prepare as instructors of physical training or coaches of athletic teams.

FOR WOMEN

The general health and development of all young women in this department are carefully looked after by the Director of the Women’s Gymnasium. Each one is given a physical examination, in order that her physical condition may be known, suitable exercise prescribed, and advice given.

Systematic class drill is given in Swedish, Delsarte, and American gymnastics, including free and light exercises; dumb-bells, clubs, wands, marching, fancy steps, Maypole, games, basket-ball, and exercise on the various pieces of gymnasium apparatus. The gymnasium uniform consists of navy blue serge blouse and divided skirt, and black slippers.

Throughout the fall and spring outdoor games and exercises receive considerable attention. Lectures and talks on hygiene, physical training, etc., are given during the winter.

Each student comes under the personal observation of the director and is given exercises to meet her special needs.

Every woman student not physically disqualified must take the prescribed work, and may elect enough to make seven hours of credit.

The women’s gymnasium occupies very attractive quarters in Natural History Hall, and is well equipped. The pastime grounds near by, in use through the year, when the weather permits, have a sixteen-lap running track, eight tennis courts, two basket-ball fields, and space for hurdling, handball, and other suitable amusements.

The gymnasium is open for exercise, at certain hours, under suitable restrictions, to those who are not enrolled in classes.
EXPENSES

BOARD

The University does not furnish board, but there is a large number of suitable private places in Urbana and Champaign, within walking distance of the University, and easily accessible by electric railway, where students can obtain table board and rooms. There are several students' clubs at which the cost of meals is about two and a half dollars a week.

The Business Manager and the Young Men's and Young Women's Christian Associations of the University will aid new students in procuring rooms and boarding places.

FEES

Technological, Scientific, Agricultural, and Literary Departments.

Matriculation Fee. Each student not holding a scholarship, upon satisfying the requirements for admission to the University, pays the matriculation fee of $10.00.

Diploma Fee. Payable before graduation, is $5.00.

Incidental Fee. All students, except those in the Graduate School and those holding scholarships, pay, each semester, an incidental fee of $12.00.

Tuition Fee. Students "conditioned" on entrance requirements, "special" students (see p. 54), except special students holding scholarships, pay, each semester, a tuition fee of $7.50.

Laboratory Fees and Deposits. Each student working in laboratories, or in the drafting or engineering classes, is required to make a deposit varying from 50 cents to $10.00, to pay for chemicals and apparatus used, and for any breakages or damages.
**Music Department**

Students who are candidates for a degree in the music department pay the matriculation fee of $10.00.

Students in the music department taking studies in other departments of the University pay the “incidental” fee each semester $12.00.

They also, if not matriculated, pay, each semester, the tuition fee of $7.50.

Students not enrolled in other departments, and so not paying the “incidental” fee, pay special music fees as follows:

- Piano, organ, or voice, two lessons a week, each semester: $32.50
- Same, one lesson a week: $19.50
- Violin or other stringed instrument, two lessons a week, each semester: $26.50
- Same, one lesson a week: $14.50

These students may enter classes in Physical Training (see p. 279) on paying, each semester $5.00.

Students regularly enrolled and paying the “incidental” fee in other departments pay music fees as follows:

- Piano, organ, or voice, two lessons a week, each semester: $25.00
- Same, one lesson a week: $15.00
- Violin or other stringed instrument, two lessons a week: $19.00
- Same, one lesson a week: $10.50

All students in harmony, counterpoint, fugue, etc., in classes not to exceed four, pay, each semester $9.00.

No deduction is made on account of absence in any course, except in case of protracted illness.

Students can rent pianos for practice by applying to the head of the music department.

After September, 1901, matriculated students, residents of Illinois, will not be required to pay extra fees for instruction in music.

**College of Law**

Students of the College of Law, upon satisfying the requirements for admission, pay the matriculation fee of $10.00.

Tuition fee, each semester: $25.00

Students conditioned on entrance requirements pay, each semester, an additional fee of $7.50.
EXPENSES

College of Medicine
Matriculation fee, paid each year........................................ $5 00
General ticket, each term...................................................... 55 00
Laboratory Deposit (for material and breakages, balance returned) .................. 10 00
Maternity hospital fee, payable once during senior year..... 10 00

School of Pharmacy
Tuition fee, each year.......................................................... $75 00
Laboratory deposit, each year.............................................. 5 00

Preparatory School
All pupils in the Preparatory School pay, each semester, an “incidental” fee of............... $12 00
Also a tuition fee of......................................................... 7 50

All Bills due the University must be paid within ten days after the student enters classes.

NECESSARY EXPENSES

The following are, for students attending at Urbana, estimated average annual expenses, exclusive of books, clothing, railroad fare, laboratory fees, if any, and small miscellaneous needs:

*Semester fees.......................................................... $24 00 to $24 00
Room rent for each student (two in room)...... 23 00 “ 50 00
Table board in, boarding houses and clubs...... 90 00 “ 126 00
Fuel and light.............................................................. 10 00 “ 15 00
Washing................................................................. 12 00 “ 18 00

Total ..............................................$159 00 to $233 00
Board and room in private houses, per week..... 4 00 “ 6 00

A LUNCH ROOM for the benefit of University students will be opened in University Hall next September.

CAUTION TO PARENTS—STUDENTS' FUNDS

The Business Manager will receive on deposit any funds parents may entrust to him to meet the expenses of their children.

* Students of law and music, and pupils of the Preparatory School, must make needed changes in the amount given for “Semester fees.”
sons and daughters. No greater error can be committed than to send young people from home with large amounts of spending money, and without the authoritative care of some prudent friend. Half the dissipation in colleges springs from excessive allowances of money.

PREPARATORY SCHOOL

INSTRUCTORS

Edward G. Howe, B.S., Principal, Natural Science.
Lillie Adelle Clendenin, English.
Charles B. Randolph, A.B., Latin and Greek.
Clarence W. Alvord, A.B., History and Algebra.
James W. Buchanan, Geometry and Physics.

This school offers special advantages to young men and women who, on account of advanced age or prolonged absence from school, are out of touch with the high school.

ADMISSION

Candidates for admission must be at least fifteen years of age. Those of age may enter such classes as they are prepared for without examination. All under twenty-one years of age, except those coming from accredited schools (see p. 41), must pass a satisfactory examination in the following subjects:

1. Arithmetic.—A thorough knowledge is required of fundamental operations, simple and denominate numbers, the metric system of weights and measures, common and decimal fractions, practical measurements, percentage, ratio and proportion.

2. English.—The examination is intended to test the student’s vocabulary, and his knowledge of grammar.

3. Geography.—An accurate knowledge of physical configuration, political divisions, and important centers of population, is required.

4. History.—As a foundation in this subject, a knowledge of
the early settlement of North America, and of the growth and development of the United States, is required. A knowledge of the nature and operation of the forces active in American life is desired, rather than the memorization of isolated dates and names.

Entrance should be made at the opening of a semester. Examinations are held in the rooms of the school. For the first semester, 1900-1901, these examinations occur on Thursday, Friday, Saturday, and Monday, the 13th, 14th, 15th, and 17th of September; for the second semester Friday and Saturday, February 1 and 2, 1901. Examinations on these dates are free, but for examinations at other times a fee of three dollars is charged.

Examinations for Entrance may be conducted in Illinois by county superintendents of schools in the same manner as for teachers' certificates, and their favorable reports will be accepted. First or second grade teachers' certificates from superintendents of Illinois will be taken for the same purpose.

Admission from Accredited Schools. On the written recommendation of their principals, students from the accredited schools of the University may be admitted without entrance examinations and credit will be allowed for all equivalent work already done. Blanks for such recommendations will be sent on application.

COURSE OF STUDY

The time necessary to prepare for the University (see p. 40) is not fixed, but depends upon the ability and previous training of the student. Applicants will be admitted at any time on presenting proof that they are prepared to pursue the selected subjects. Preparatory students generally carry four studies, one of which should be such as needs but little work outside of the class room. The number varies, however, with the ability of the student and the nature of the course.

The following schedule gives the subjects in which instruction can be had and the semester in which they are taught:
COURSE OF INSTRUCTION

[Studies may be taken in semesters as here indicated, but must be taken in the required sequence.]

First Semester.—*Algebra; English Composition and Literature, through two years; English Grammar reviewed, if necessary; Rhetoric; Drawing; French (second year); German (second year); Latin—first year, Beginner’s book; second year, Cæsar and Sallust; third year, Cicero; Greek—first year, Grammar, Reader, and Composition; second year, Xenophon, Composition, and Grammar; Plane Geometry, Solid Geometry; English and American History; Physics, after the recess; Physiology, until the recess; Zoölogy.

Second Semester.—Algebra; Botany; English Composition and Literature, through two years; Rhetoric; Drawing; French (first and second years); German (first and second years); Latin—first year, Reader and Cæsar; second year, Cicero; third year, Vergil; Greek—first year, Grammar, Composition, and Anabasis; second year, Grammar, Composition, and Herodotus; Plane Geometry; Solid Geometry; English and American History; Physics.

DESCRIPTION OF COURSES

ALGEBRA

Emphasis is laid upon the use of purely literal expressions, radicals, fractional and negative exponents, and upon the fundamental nature of the equation.

BOTANY

This is a study of plants rather than of books about plants, although books are not disregarded. It is an introduction to the science, and is intended to give an acquaintance with the chief features of the subject. The analysis of simple flowers and the preparation of a small herbarium of correctly named and properly mounted plants is required. Bergen's Elements of Botany.

ENGLISH

The subject is presented in such a way as to increase the student’s vocabulary and to develop ease and exactness of expression in his composition. Advanced grammar and rhetoric are taught in connection with this work. The study of literary masterpieces is also pursued to furnish material for the frequent written exercises,

* If five or more apply, a class will review the entire subject in the first semester.
and to cultivate a taste for good literature. Considerable collateral reading in English and American authors is therefore required.

**FREE-HAND DRAWING**

This subject is best taken in the first semester in order that pupils may have the benefit of its training in the studies which follow. *Frederick's Notes on Free-Hand Drawing*.

**FRENCH**

The work in this subject will be the same as that indicated under entrance requirements, p. 50.

**GERMAN**

**COURSE A.—**Beginning work, Joynes-Meissner's Grammar and Hewett's German Reader.

*Required:* German A or one year of high school work.

**GEOMETRY**

Special attention is paid to the development of the idea of mathematical demonstration; and, as many students who can reason logically cannot express their ideas clearly, due attention is paid to correctness of form. As soon as the student has attained the art of rigorous demonstration he is required to produce constructions and demonstrations for himself. Considerable attention is devoted to original work. *Wentworth's Plane and Solid Geometry (revised).*

**GREEK**

The study of this subject should, when possible, be preceded by at least one year of Latin. For particulars see entrance requirements, p. 51.

**HISTORY**

Instruction in this subject is confined to English and American History. A detailed study of the rise and progress of the English-speaking people in England and America is made, and considerable attention is given to the origin and development of representative government. *Oman's History of England. Fiske's History of the United States, and Civil Government.*

**LATIN**

The ground covered consists of the grammar and selections from
Caesar, Sallust, Cicero, and Vergil. Translation of English into Latin is made a prominent part of the work, and in connection with the Vergil the scansion of hexameter verse and matters of historical and mythological interest are studied. The Roman method of pronunciation is used, with special attention to quantity.

Physics

This study is so presented as to cultivate habits of careful observation, and to develop in the student the ability to reach general conclusions inductively by means of exact experiment. In all laboratory work the student is required to keep a note-book containing a complete record of experiments performed. Wentworth and Hill's Physics.

Physical Training

Preparatory students may have the benefit of a thorough physical examination and regular exercise, under the guidance of University instructors, but not for either entrance or University credits.

Physiology

In this subject the book used is illustrated by the use of charts, skeleton, and manikin, and by a series of laboratory experiments. Colton's Physiology.

Zoology

Through the study of typical animals the subject is so presented as to lead the student to a knowledge of methods of scientific classification in the natural sciences, and to prepare for the more advanced work of the University.

Regulations

Reports regarding all non-resident and minor students (and, upon request, regarding any others) are sent to parents or guardians as soon as students are settled in their work, and reports regarding all students are sent at the close of each semester.

The calendar of the Preparatory School is the same as that of the University.

For information about fees and expenses, see page 281.

For special information with regard to the Preparatory School, address Edward G. Howe, Urbana, Illinois.
LIST OF STUDENTS

TECHNOLOGICAL, SCIENTIFIC, AGRICULTURAL, AND LITERARY DEPARTMENTS

GRADUATE SCHOOL

Alvord, Clarence Walworth, A.B., (Williams Coll.), 1891, Champaign, History and Philosophy.

*Barclay, Thomas, B.S., 1891, Aurora, Smelting and Refining Processes of the United States; Geology of Ore Deposits.

*Beckerleg, Gwagas Foster, B.S., 1899, Chicago, Civil Engineering.

Black, William Wesley, A.M., 1899, Champaign, Pedagogy.

*Bliss, Anson Lee, A.B., (Austin Coll.), 1895, Anna, Pedagogy.

*Brown, Walter Burroughs, B.S., 1897, Buffalo, N. Y., Chemistry.

*Burt, Henry Jackson, B.S., 1896, Wall Lake, la., Civil Engineering.

Busey, Marietta Ruth, A.B., (Vassar Coll.), 1899, Urbana, French.

Campbell, George Henry, B.L., 1895, Champaign, Latin.

Carpenter, Hubert Vinton, M.S., 1899, Champaign, Mathematics and Physics.

Chipps, Halbert Lilly, B.S., 1899, Sullivan, Civil Engineering.

*Clarke, Edwin Besançon, B.S., 1891, Chicago, Architecture.

*Clifford, Charles Luther, B.S., 1899, Serena, Electrical Engineering.

Clinton, George Perkins, M.S., 1894, Urbana, Botany.

Dillon, William Wagner, A.B., 1898, Sheldon, History and Economics.

Fay, John Carl, A.B., (Berea Coll.), 1899, Champaign, Mathematics and Chemistry.

*Foberg, John Albert, B.S., 1899, Chicago, Mathematics and Physics.

Fraser, Wilber John, B.S., 1893, Champaign, Agriculture.

*Gerber, Winfred Dean, B.S., 1899, Rockford, Municipal and Sanitary Engineering.

*Grimes, George Lyman, B.S., 1897, Ann Arbor, Mich., Mechanical Engineering.

* In absentia, see p. 265.
*Herwig, John Newton, B.S., 1899, Bloomington, Mechanical Engineering.
*Honens, Fred William, B.S., 1896, Milan, Civil Engineering.
Hubbard, George David, M.S., 1898, Urbana, Paleontology, Zoology, and Entomology.
Jones, Louise, A.B., 1899, Champaign, French.
Ketchum, Milo Smith, B.S., 1895, Champaign, Civil Engineering.
*Ketchum, Richard Bird, B.S., 1896, Chicago, Civil Engineering.
Koch, Fritz Conrad, B.S., 1899, Elmhurst, Chemistry.
Kofoid, Mrs. Prudence Winter, A.B., (Oberlin Coll.), 1890, Urbana, History.
*Lampe, Margaret Henrietta Johanne, A.B., 1897, Bloomington, German.
Large, Thomas, A.B., (Indiana Univ.), 1897, Urbana, Zoology.
Latzer, John Albert, B.S., 1899, Highland, Agricultural Bacteriology.
Leutwiler, Oscar Adolph, B.S., 1899, Highland, Mechanical Engineering.
*Linn, Homer Roberts, B.S., 1896, Cleveland, Ohio, Mechanical Engineering.
McCartney, William Priestley, B.S., 1893, Champaign, Chemistry.
Marble, Harry Curtiss, B.S., 1896, Champaign, Electrical Engineering.
Meharry, Jesse Erle, A.B., 1899, Tolono, Economics.
*Millar, Adam Vause, B.S., 1897, Champaign, Mathematics and Astronomy.
Milne, Edward Lawrence, B.S., 1896, Champaign, Mathematics and Astronomy.
*Moore, Grace Lillian, B.S., 1895, Decatur, Natural Science.
*Newell, Mason Harder, A.B., 1899, Springfield, Public Law and Administration.
Porter, Horace Chamberlain, A.B., 1897, B.S., 1899, Champaign, Chemistry.
Quaintance, Hadly Winfield, A.B., (Univ. of Neb.) 1896, Cable, Economics and History.
*Richart, Frederick William, B.S., 1891, Collinsville, Mechanical Engineering.
*Parr, John Louis, B.S., 1897, Peoria, Architecture.
*Robinson, Lewis Archibald, A.B., 1898, White Post, Va., General, L. and A.
Rose, Carlton Raymond, Ph.M., (Univ. of Mich.), 1896, Champaign, Chemistry.
*Ross, Luther Sherman, M.S., 1890, Des Moines, Ia., Biology of Subterranean Crustaceans.
Sammis, John Langley, M.S., 1899, Champaign, Chemistry.

* In absentia, see p. 265.
Schulz, William Frederick, Diploma in Elect. Eng’g. (Johns Hopkins Univ.), 1893, Baltimore, Md., Electrical Engineering.
*Seely, Garrett Teller, B.S., 1899, Oswego, Civil Engineering.
Shamel, Archibald Dixon, B.S., 1898, Taylorville, Agricultural Physics.
Sparks, Marion Emeline, A.B., 1895, B.L.S., 1899, Urbana, Classical.
Spence, Franklin, B.S., 1895, Urbana, Architecture.
*Sweney, Don, B.S., 1896, Galesburg, Mechanical Engineering.
*Teeple, Wallace Douglas, B.S., 1897, Marengo, Architecture.
*Tower, Willis Eugene, B.S., 1894, Chana, Physics.
*Unzicker, William Luther, A.B., 1898, Hope Dale, Latin.
Walter, Charles Albert, B.S., Phar. Chem., 1898, Indianapolis, Ind.,
The Quantitative Estimation of the Active Medicinal Principles of Plants.
*Ward, Mrs. Velma Skinner, B.L., 1877, Champaign, English.
*Webster, William W, B.S., 1899, Urbana, Mechanical Engineering.
Weirick, Ralph Wilson, B.S., 1899, Washington, Architecture.
*Williamson, Albert St. John, B.S., 1898, Milwaukee, Wis., Mechanical Engineering.
*Wolcott, James Thompson, B.S., 1898, Peoria, Chemistry.
*Zimmerman, Walter Howard, B.S., 1897, Champaign, Mechanical Engineering.

 SENIORS

[In the list which follows, “L. and A.” stands for College of Literature and Arts; “S.” for the College of Science.]

Abry, Bertrand Buhre, Cheyenne, Wy., Electrical Eng’g.
Alarco, Joseph Maria, Valencia, Spain, Civil Engineering.
Ambler, Sarah, M.S., (Iowa Wesleyan Univ.), 1885,
Appelquist, Jerome Gustav, Mt. Pleasant, Ia., Library.
Ashley, Harriet Elizabeth, Orion, Civil Engineering.
Beck, Florence Maria, Urbana, General, L. and A.
Bennett, Edith Page, Platteville, Wis., Library.
Bixby, Alice Persis, Mattoon, Classical.
Bracken, Ellis Freeman, Belvidere, Library.
Branch, Elizabeth, Greenview, Electrical Eng’g.
von Briesen, Julia Henrietta, Champaign, Library.
Brown, William Jay, Columbus, Wis., Library.
Buchanan, James William, Urbana, Architecture.
Bullock, Jessie Jane, Charleston, Ind., Natural Science.
Burke, Eugene Irving, El Paso, General, L. and A.
Burroughs, Elmer, Champaign, Philosophy, S.

* In absentia, see p. 265.
Busey, Robert Oscar, Urbana, General, L. and A.
Bush, John Kenyon, Joliet, General, L. and A.
Campbell, Bruce Alexander, Albion, General, L. and A.
Capron, Clyde, Marion, General, L. and A.
Church, Walter Samuel, Chicago, Architecture.
Clatworthy, Linda Marie, Evanston, Library.
Darmer, George Alexander, Champaign, General, L. and A.
Detrick, Nellie Elizabeth, Champaign, General, L. and A.
Dowiatt, Stanislav, Chicago, Mechanical Eng'g.
East, Edward Murray, DuQuoin, Chemistry.
Eddy, Clarence LeRoy, Weldon, Ia., Civil Engineering.
Fisher, John William, Orangeville, Natural Science.
Foster, William Grant, Urbana, Architecture.
Fox, Harry Bert, Urbana, Natural Science.
Francis, Frank D, New Lenox, General, L. and A.
Freeman, Harry Eben, Millington, Natural Science.

COLLEGE OF LAW

Needham, John Lowry, Champaign.
Porter, Alice Delle, Champaign.
Pricer, Charles Aubert, Mahomet.
Reynolds, Mabel, Urbana.
Rhodes, Ida, Champaign.
Showers, Metta Marguerite, Urbana.
Sparks, George, Urbana.
Stark, Amy Alberta, Champaign.
Tinsley, Minnie Alice, Champaign.
Treakle, Mrs. Maud Talbot, Champaign.
Vandeveer, Jennie Mary, Urbana.
Ware, Bertha, Champaign.
Wright, Edith, Champaign.
Wright, Gains Emery, Champaign.
Young, Harry Harrison, Bondville.

COLLEGE OF LAW

THIRD YEAR

Adams, Otto C, Cerro Gordo.
Baker, Zion Frost, Sullivan.
Barrett, George Francis, Chicago.
Boyd, Hobart Sherman, Lewistown.
Cooper, Fred Worth, Champaign.
Dolan, William John, Ohio.
Doney, Oliver Kinsey, Urbana.
Dougherty, Horace Raymond, A.B., (Univ. of Chicago), 1896, Peoria.
Fulton, William John, A.B., 1898, Hartford City, Ind.
Glenn, Leslie Leland, Champaign.
Glenn, Otis Ferguson, Champaign.
Grossberg, Harry Altman, Chicago.
Kennard, Perry Garst, Champaign.
Ketchum, Margaret Adele, LaPrairie.
McCartney, William Priestly, B.S., 1893, Champaign.
May, Fred Hutchinson, Prophetstown.
Mulliken, Albert Danforth, Champaign.
Ostrowski, Samuel, Chicago.
Rhodes, Edward Melvin, Bloomington.
Roe, Arthur, Vandalia.
Rowland, Elbert Mallary, Olney.
Saffer, Louis Byron, Urbana.
Schaefer, Peter Philip, Urbana.
Tooke, Charles Wesley, A.M., (Syracuse Urbana), 1893.
Trevett, John Howard, Champaign.
Van Brundt, Chester S, Champaign.
Wesemann, Adolph Henry, LaGrange.

SECOND YEAR

Adsit, Bertram Wilson, Wellington.
Boggs, Oliver Carter, Urbana.
Boyd, John William, Rantoul.
Church, Floyd Franklin, Bloomington.
Cofield, Jesse Douglas, Arcola.
Elder, Roy Samuel, Streator.
Evans, Waldo Carl, Danville.
Hall, Arthur Raymond, East Lynn.
Harker, George Mifflin, Carbondale.
Holmes, Frank Hamilton, N. Henderson.
Humphry, Wallace George, Hamilton.
McCollum, Harvey Darling, Louisville.
Null, Louis Agassiz, Blandinsville.
Padget, Will Marion, Palmyra.
Perkins, Frederic Allen, Canton.
Remann, Frederic Gordon, Vandalia.
Sherman, William Horace, Sullivan.
Stevenson, Amos Milton, Ottawa.
Thompson, Frank James, Chicago.
Tunnecliffe, John James, Jr., Galesburg.
Wilder, Frank Smith, A.B., (Illinois Wesleyan Univ.), 1898, Champaign.
Wingard, Lewis Forney, Champaign.

FIRST YEAR

Boggs, Harry Hurd, Galesburg.
Boyer, Harry Bennard, Altamont.
Cairns, David Gemmell, Troy Grove.
Dawson, Roscoe Milburn, Westfield.
Garrett, Richard Pratt, Delavan.
Hetherington, Benjamin William, LaSalle.
Hughes, Samuel Kelso, Champaign.
Jones, Henry Leonard, Delavan.
Ketchum, Daniel Clement, A.B., 1899, Elmwood.
Kiler, William Henry, A.B., 1897, Urbana.
Kingsbury, James Thompson, A.B., 1899, Pinkstaff.
Lego, Lulu Mackintosh, Urbana.
Martin, Robert William, Wilmington.
Miller, Thomas Henry, Macomb.
Morrisey, Fay, Champaign.
Rhoads, Horace Adams, A.B., 1899, Champaign.
Sheldon, Carl Edmunds, A.B., 1899, Sterling.
Smith, Claude Frank, Clay City.
Smith, Claude Frederick, Chicago.
Spurgin, William Grant, A.M., 1898, Urbana.
Stern, Nathan, Champaign.
Stipes, Royal Arthur, Champaign.
Siegfriedt, Thorwald Adolf Arthur, Davenport, Ia.
Thompson, George Mershon, Bement.
Webster, John Wesley, Ph.B., (De Pauw Univ.), 1898, Danville.
Wood, Harvey Edgerton, Joliet.
Wyne, Ervin Evermont, Macomb.

SPECIALS
Abbott, Allie Morledge, Clarinda, Ia.
Brown, Volney Edward, Woodstock.
Coffman, Henry Augustus, Champaign.
Crouch, William Liebrick, Rozetta.
Day, Frederic Lathrop, Brimfield.
Gardiner, Royal Thomas, Troy Grove.
Howard, Joseph, Urbana.
Jones, Guy Raymond, Tuscola.
Kuhn, Leopold, Champaign.
Lorenson, John Hanson, Lovington.
Stewart, William Bowen, Mason City.
Snyder, Bertram Eugene, Dalton City.
Switzer, Robert Mortimer, Galesburg.
Wingard, David Roy, Champaign.
Wright, William Wilberforce, Jr., Toulon.

350
Commencement Day, June 14, 1899, degrees were conferred as follows:

Samuel Michael Bayard.
Ruth Bennett.
Mary Constance Bigelow.
Clarence Edgar Bocock.
Lucile Alice Booker.
Edith Clark.
Mary Edith Clark.
Philip Henry Clark.
Daisy Garver.
Louise Jones.
Daniel Clement Ketchum.
James Thompson Kingsbury.
Ida Susan Landel.
William Blake Leach.
Ella Loftus.
Mrs. Mary McGilvrey.
Jesse Erle MeHardy.
Mason Harder Newell.

A.B.
Arthur Elijah Paine.
Roy J. Railsback.
Ruth Cleveland Raymond.
Emma May Rhoads.
Horace Adams Rhoads.
Felix Ritchey.
Walter Robert Schutt.
Frank Thomas Sheean.
Henry David Sheean.
Carl Edmunds Sheldon.
Florence Mary Smith.
Elma Smoot.
Tom Woods Smurr.
Maggie Edith Staley.
Ralph Thompson.
Alice Mildred Vial.
Lulu Catherine Woolsey.
Bertram Otho Young.

B.S.
George Dodds.
Alexander Dawes DuBois.
Harry Truxtun Eastman.
Howard Montgomery Ely.
Clarence Earl Fleager.
Eugene William Penn Flesch.
Marcus Samuel Fletcher, M.D.
John Albert Foberg.
Robert Lambert Fowler.
William Alexander Fraser.
Winfred Dean Gerber.
Hugh McWhurr Gilchrist.
Walter B Griffin.
Fred Grim.
Louis Dixon Hall.
John Newton Herwig.
Irwyn Horatio Hill.
John King Hoagland.
George Wallace Hubbard.
Allie Dellenia Hughston.
Frederick Milton James.
James Franklin Kable.
Fritz Conrad Koch.
John Albert Latzer.
Carroll Gray Lawrence.
Oscar Adolph Leutwiler.
Fred Morgan McElfresh.
Benoni Edward Mercil.
Josef Mesiroff.
Ralph Walter Mills.
Allen Meade Otwell.
Dasie Margaret Owens.
Horace Chamberlain Porter.
Fred Jacob Postel.
George Leslie Rapp.
John Eaton Raymond.
Paul Frederick Augustus Rudnick.
Garrett Teller Seely.
Charles Augustus Smith.
Elmer Church Smith.
Sidney Orin Swenson.
george Edward Tebbetts.
Otto John Theiss.
Martin L Ullensvang.
William Herbert Vance.
Edmund Volk.
Ben: Perley Weaver.
William W Webster.
Ralph Wilson Weirick.
James Ingersoll Wernham.
Mark Hubert Whitmeyer.
Maurice Meacham Willcox.
George Bassett Williams.
George Henry Wilmarth.
John Hayes Young.

Jane Elizabeth Cook.
Edna Fairchild.
Emma Reed Jutton.
Marion Emeline Sparks.
Laura Allana Streight.

Alice Putnam.

Richard Charles Donoghue.
Harold Frederick Trapp.

William Wesley Black.
Lucy Hamilton Carson.

Opal Heller.

James Harry McKee.

Andrew Henry Neureuther.
At the Commencement of the School of Medicine, April 19, 1899, degrees were conferred as follows:

M.D.

Charles A. Albrecht.
Hubert Franklin Andrews.
J. W. Backus.
Ernest Stanley Barker.
Frederick Louis Barnes.
Hiram H. Bay.
August Frederick Bechtold.
Lora L. Beedy.
E. E. Best, M.D.
Jonathan Clymont Betz.
James Moreau Brown.
George Stillman Browning.
Thomas Jerome Burke.
John H. Bush.
Clarence Albert Butler.
William Bernard Campbell.
Henry Colistuc Carroll.
W. H. Chamber, M.D.
E. A. Chloupek.
C. M. Coen.
L. G. Crosby.
Conrad Howard Czarra.
J. H. Dugan.
Bernard Fantus.
Leon Feingold.
Marie A. Fellows.
George Carl Fisher.

M.S.

William Charles Brenke.
Hubert Vinton Carpenter.
Harry Clay Coffeen.
Louise Sarah Dewey.
Harry McCormack.

John Langley Sammis.
Richard W. Sharpe.
Louie Henrie Smith.
Albert Philip Sy.

LL.M.

George Bedell Worthen.

Ira Frank.
Frank Lesley Freas.
James William Garth.
Henry Gathman.
Robert J. Goggin.
B. C. Grabowicz.
John Patrick Grimes.
James Lloyd Hammond.
Frederick G. Harris.
Harvey C. Heald.
A. E. Herzog.
Thomas R. Hillard, A.B.
Henry J. Hillebrand.
Mrs. Helen Taylor Hisom.
Hanna Luella Hukill.
C. C. Hummel.
Mary Gill Hunter, M.D.
A. Jacobson.
Herman Janss.
Abbott E. Kay.
Russell Calvin Kelsey, M.D.
Matthias Joseph Klein.
W. E. Klokke.
F. B. Knudson.
Eugene O. Koenemann.
Albert G. Kreuger.
Thomas D. Lafray.
Albert Robert Lemke.
William Henry Lerch.
Ross David Long.
W. E. Long.
David Ellsworth Lucas.
Robert G. McCarthy.
Alberta V. McClung, M.D.
Charles Alfred McCormick, M.D.
Oscar Eugene McWilliams.
O. E. Macy.
E. H. Madajesky.
F. F. Markey.
John Eugene Metcalf.
Frank William Myers.
Frank D. Moore.
Frederick Wolfgang Myers.
Wilhelm Carolins Olsen.
James Alphonse Peters.
Benjamin Merchant Platt, M.D.
Valdemar Pleth, M.D.
Jesse Young Potter.
Frank P. Ramsey.
Elmer J. Raw.
M. A. Reasoner, B.S.
William Frederic Reich.
F. A. Richards.
Herman Richard Russell.
Philip G. Sanderson.

George Francis Scheib, B.S.
Gustav Schmitt, A.M.
Albert J. Schoenberg.
Charles E. Sisson.
Clarence Howard Slightam.
Thurston Smith.
Frank B. Steele.
A. W. Stillians.
Samuel Martin Strohecker.
John Stewart.
Eugene A. Sullivan.
J. E. Swanson.
John Richard Taylor.
Theodore Ticken.
Edmund Walter Timm.
John Harrold Turner.
James Lawson Walsh.
Edward Mathias Wanicek.
Carl E. L. Weber.
Ernest August Weichbrodt, M.D.
John Valentine Wenzel.
James William Wherry.
Eugene Rudolph Whitmore.
LeRoy Alvin Wilson.
Edward Clark Winans.
Glenn Wood.
William Kriebel Yakel, B.S.
Sallie A. Yingst.
Kasimar A. Zurawksi.

At the Commencement of the School of Pharmacy, April 20, 1899, degrees were conferred as follows:

PH.G.

George Edwin Arnold.
Charles Walter Bartells.
Carl August Bernhardt Biese.
Horatio Thomas Addis Brady.
William John Buchholtz.
John Samuel Chism.
Adolph Dauber.

Cyrus Justin Davis.
August Eipper.
Louis Albert Elisburg.
George Christopher Goeppner.
Grove Greene.
Frank Preston Haeseler.
Albert Henry Heidbreder.
SCHOLARSHIPS, COMMISSIONS

Joseph Anthony Hellmuth.
Charles Herbold.
Alva Andrew Johnson.
Walter August Jungk.
John Wright Martin.
Zebina Earle Marvin.
Alonzo Edward Meinzer.
Albert Michaelmann.
Jay Howard Mitchell.
Howard Arthur Nickerson.
Luther Hansford Phipps.
Emil Emil Pick.
Frank Joseph Pokorney.
Walter Thomas Price.

William Conrad Reuter.
Andrew Jackson Robson.
Charles Howard Schimelfenig.
Jacob Schrobt.
Daniel Peter Seibert.
William Edward Snyder.
Isa Belle Sturges.
Harold Gideon Swanson.
George Owen Taylor.
Raymond Eugene Taylor.
DeWitt Snow Vannatta.
Frederick Wilhelm Woelz.
William Zerbst.

HOLDERS OF SCHOLARSHIPS AND COMMISSIONS

HONORARY SCHOLARSHIPS

Cook, Barrett, George F., Chicago.
McDonough, Provine, L. H., Macomb.
Marshall, Ponzer, Ernest W., Henry.
Williamson, Capron, Clyde, Marion.
Winnebago, Temple, Harry E., Elida.
Woodford, Ray, Walter T., Eureka.

STATE SCHOLARSHIPS (P. 269)

Adams, Luther, Otto, Quincy.
Bond, Wolleson, Herbert Belleville.
Boone, Dake, Leroy G., Harvard.
Bureau, Cook, William A., Urbana.
Champaign, Black, Alice M., Champaign.
Champaign, Draper, Charlotte E., Champaign.
Champaign, Booker, Helen E., Champaign.
Coles, Stubbins, Lewis C., Mattoon.
Coles, Frost, Frank G., Gays.

Battery—First Lieutenant, C. L. Logue; First Sergeant, B. W.
Hicks; Sergeants, H. B. Ketzle, W. H. Fursman.
Accredited Schools, 41ff.
Adelphic Literary Society, 274.
Administration of the University, 57; officers of, 9.
Administration, Public Law and. See PUBLIC LAW.
Admission: To the University, by certificate, 40; by examination, 45ff.; as special students, 54; by transfer of credits, 54; to the Bar, 155; to the College of Law, 153; to the College of Medicine, 157; to the Graduate School, 142; to the Library School, 145; to the Preparatory School, 284; to the School of Pharmacy, 165.
Advanced standing, 54, 158, 158.
Agricultural Experiment Station, staff, 24; history of, 28; library, 39.
Agriculture, College of. See COLLEGE.
Agronomy, courses in, 172ff.; department of, 185.
Alethenai Society, 274.
Anglo-Saxon. See ENGLISH.
Animal Husbandry, courses in, 176; department of, 138.
Anthropology, course in, 178.
Architectural Engineering, 84; courses in, 85.
Architecture, 82ff.; courses in, 88ff., 166, 178ff.; department of, 82; graduation, 56, 88, 85.
Art and design, 72; courses in, 185ff.
Art Gallery, 38.
Astronomy, for admission, 48; courses in, 116, 188; department of, 117; equipment, 118.
Athletic Meet, Interscholastic. See CALENDAR.
Athletics. See PHYSICAL TRAINING.
Bacteriology, 166. See courses in BOTANY.
Band, Military, 151, 279.
Bar, admission to, 155.
Battalion, officers of, 858.
Beneficiary Aid, 278ff.
Biological Experiment Station, 54.
Biological, for admission, 48; courses in, 190ff.; department of, 126.
Board. See EXPENSES.
Botany, for admission, 48; courses in, 190ff.; department of, 126; equipment, 85, 128; In Preparatory School, 286.
Buildings and Grounds, 29.
Calendar, 5.
Chemical and Physical Group, 108.
Chemistry, for admission, 48; courses in, 103, 105, 107, 166, 192ff.; department of, 111; equipment, 29, 33, 104; graduation in, 56, 107, 108; laboratories for, 29, 33, 104; Applied and Engineering, 108, 112.
Chicago Club Loan Fund, 274.
Choral Society, 151, 247.
Christian Associations, 275.
Civics, for admission, 48.
Civil Engineering, courses in, 200ff.; department of, 86; equipment, 33, 86; graduation, 56, 86.
Class of 1895 Loan Fund, 274.
Collective Group, 65.
Clubs, 151, 275ff.
Collections, 34ff.
College of Agriculture, 59; admission, 40, 45; aims and scope, 136; courses in, 141, 172, 176, 203, 221, 260; departments of, 138; 138; equipment, 177; faculty, 136; graduation, 56, 140, 141; methods, 136.
College of Engineering, 58, 79ff.; admission, 40, 45; aims and scope, 80; courses, 88, 85, 178ff.; civil engineering, 86, 200ff.; electrical engineering, 88ff., 208ff.; mechanical engineering, 92, 244ff.; municipal and sanitary engineering, 95, 212ff.; mechanics, 98, 239; railway engineering, 94, 200, 256ff.; physics, 251ff.; departments, 82, 86, 87, 91, 95, 96, 98; equipment, 81; faculty, 79; graduation, 56, 83, 85, 88, 89, 94, 95; methods, 81.
College of Law, 28, 60; admission, 153; advanced standing, 153; courses in, 155; faculty, 152; graduation, 153; methods of instruction, 154; special study, 153; university work in, 154; admission to the Bar, 155.
College of Literature and Arts, 58; aims and scope, 62; courses in, 62, 63, 68, 70, 71; departments of, 72ff.; faculty, 61; graduation, 56, 64, 65; law work in college, 70, 71; teachers' courses, 71.
College of Medicine, 29, 60, 156ff.; admission, 157; advanced standing, 158; courses in, 159; equipment, 160; faculty, 17; graduation, 161, 162; history of, 156; hospital, 161; library, 162; methods, 169, 160; sessions, 156, 157.
College of Science, 59, 99ff.; admission, 40, 46; aims and scope, 100; courses in, 107, 108, 110, 115, 116, 122ff.; 188, 190, 192, 215, 229, 241, 247, 251, 253, 254, 261; de-

Council of Administration, 57.

Courses, general description of, 171ff.; of instruction. See under Colleges and Schools.

Dairy Husbandry, courses in, 203, 204; department of, 138.

Deans, 57.

Degrees, 27, 264; Bachelors, 264; in agriculture, 141; in engineering, 88, 85, 86, 88, 92, 94, 95; in Law, 155; in Library Science, 148; in Literature and Arts, 63; in Medicine, 161, 162; in Music, 149; in Pharmacy, 165; in Science, 107, 108, 110, 115, 122; Second, 265, 266; Doctors, 266, 267; conferred in 1899, 351.

Donations to the University, 25, 38, 273.

Drawing, for admission, 49; general engineering, 204, 205; in Preparatory School, 287. See also Art and Design.

Economics, 72, 133; courses in, 205ff.

Edward Snyder Department of Students' aid, 273.

Election of Studies, 56, 171; in agriculture, 140; in graduate school, 143; in law, 154; in literature and arts, 63, 64, 65, 68; in music, 151; in science, 101, 103, 107, 109, 113, 120, 124, 132.

Electrical engineering, courses in, 208ff., 209ff.; department of, 87; equipment, 36, 87.

Engineering, architectural, 84; civil, 86; electrical, 87; mechanical, 51; municipal and sanitary, 55; railway, 93. See College of Engineering.

English Language and Literature, for admission, 49, 157; courses in, 212ff.; department of, 73; in Preparatory School, 287. See also Art and Design.

Entomology, courses in, 125. See Zoology.

Esthetics, 250.

Ethics, 250.

Examinations, for admission, 45ff.; for advanced standing, 54; graduate school, 143; in law, 168, 155; in medicine, 157; scholarship, 270; semester, 53; for Preparatory School, 286.

Expenses, 282ff.

Faculty, University, 11; College of Agriculture, 135; College of Engineering, 79; College of Law, 152; College of Literature and Arts, 61; College of Medicine, 17; Library School, 145; School of Music, 149; School of Pharmacy, 22.

Fees. See Expenses.

Fellowships, 288.

Fine Arts. See Art and Design and Music.

Foundry, 80, 92.

French, 66; for admission, 50; courses in, 211; department of, 77; in Preparatory School, 287.

Forestry, 222.

General Course System, 63, 121.

Geology, for admission, 50; courses in, 215ff.; department of, 127; equipment, 36, 128.

German, for admission, 50; courses in, 217ff.; department of, 73; in Romance Language Group, 66; in Preparatory School, 287.

Glee Clubs, 151.

Graduate School, 59, 142; courses in, 154; chemistry, 199; civil engineering, 202; economics, 208; electrical engineering, 212; French, 215; geology, 217; history, 221; mechanical engineering, 228; mechanics, 241; municipal and sanitary engineering, 243; pedagogy, 249; philosophy, 260; physics, 253; zoology, 263.

Graduation, requirements for, 56; College of Agriculture, 140; College of Engineering, 88, 86, 88, 92, 94, 95; College of Law, 155; College of Literature and Arts, 64, 65; Library School, 148; College of Medicine, 161; College of Science, 107, 108, 110, 114, 115, 116, 121, 132; School of Music, 149; School of Pharmacy, 155.

Graduates in 1899, 351.

Greek, for admission, 51; courses in, 219; department of, 73; in Preparatory School, 287. See Classical Group.

Gymnasiums, 32, 280.

Hazelton Prize Medal, 272.

High Schools, accredited, 41ff.

Horticulture, courses in, 221ff.; department of, 139.

Household Economics, 125, 166ff.

Hygiene. See Physiology.

Instruction, courses of. See Courses; methods of. See under College.

Interscholastic Oratorical Contest, 272. See Prizes in Oratory.

Italian, courses in, 66, 77, 223.

Laboratories, engineering, 33, 87, 93, 95; medical, 160; science, 33, 102, 104; for special research, 34; State, of Natural History, 27, 33.

Latin, for admission, 51, 158; courses in, 223ff.; department of, 74; and Modern Language Group, 66; in Preparatory School, 289. See also Classical Group.

Law. See College of Law.

Library, 31, 39, 154, 162.

Library School. See State Library School.

Library Science, courses in, 226ff. See State Library School.
Literary Societies, 274.
Literature and Arts, College of. See COLLEGE.
Loan Funds, 273, 274.
Logic, 69, 249.
Machine Shops, 30, 91.
Manual Training, for admission, 52.
Mason Historical Library, 39.
Mathematical Group, 115ff.
Mathematics, for admission, 46, 50, 157; courses in, 118ff., 229ff.; department, 75, 113, 118; equipment, 119; in Preparatory School, 286, 287.
Mechanical Engineering, courses in, 92, 234ff.; department of, 91; equipment, 36, 91; graduation, 92.
Mechanics, courses in, 239; department of, 98; equipment, 93, 98.
Medicine, College of. See COlLEGE; courses preliminary to, 123.
Military Band, 151, 279.
Military Science, courses in, 241; department of, 75, 277.
Military Scholarships, 271, 278.
Mineralogy, courses in, 241; equipment, 127. See also GEOLOGY.
Moot Court, 154.
Municipal and Sanitary Engineering, courses in, 242; department of, 95.
Music. See SCHOOL OF MUSIC.
Natural Science Group, 119.
Observatory, 51.
Omnitory, department of Rhetoric and, 77; courses in, 258; prizes in, 272.
Orchestra, 151, 247.
Organization, of the University, 58ff.
Paleontology, courses in, 247. See also GEOLOGY and MINERALOGY.
Pedagogy, courses in, 247; department of, 75, 193.
Pharmacy See SCHOOL OF PHARMACY.
Philomathean Literary Society, 274.
Philosophical Group, 66, 131.
Philosophy, courses in, 249; department of, 76, 181.
Physical Training, 76; courses in, 250; department, 279; Preparatory School, 286. See under GRADUATION REQUIREMENTS.
Physics, for admission, 52, 158; courses in, 108, 110, 115, 251; department of, 96, 103, 112; equipment, 96ff.; in Preparatory School, 286.
Physiography, for admission, 52; course in, 127, 283.
Physiology, for admission, 52; courses in, 254; department of, 129, 167; equipment, 129; in Preparatory School, 286.
Political Science Group, 67.
Preparatory School, 28ff.
Prizes, 272.
Psychology, courses in, 255; department of, 77, 184; equipment, 134; laboratory, 33.
